

# AI-900 Exam Cram - AI-900 Reliable Test Testking

P.S. Free & New AI-900 dumps are available on Google Drive shared by DumpsMaterials: <https://drive.google.com/open?id=1OXLmU89YDmoXQCiaRbNNA6mC8H8XvVh>

You can contact our service any time as long as you have questions on our AI-900 practice engine. They are available 24-hours for guidance and information to help you solve your problem or confusion on the AI-900 exam braindumps. And they can also give you the fast and professional help as they are trained to deal with matters with high-efficiency on our AI-900 learning guide. And if you buy our AI-900 training materials, you will find you can have it in 5 to 10 minutes.

As a matter of fact, long-time study isn't a necessity, but learning with high quality and high efficient is the key method to assist you to succeed. We provide several sets of AI-900 test torrent with complicated knowledge simplified and with the study content easy to master, thus limiting your precious time but gaining more important knowledge. Our Microsoft Azure AI Fundamentals guide torrent is equipped with time-keeping and simulation test functions, it's of great use to set up a time keeper to help adjust the speed and stay alert to improve efficiency. Our expert team has designed a high efficient training process that you only need 20-30 hours to prepare the exam with our AI-900 Certification Training. With an overall 20-30 hours' training plan, you can also make a small to-do list to remind yourself of how much time you plan to spend in a day with AI-900 test torrent.

## AI-900 Reliable Test Testking | Dumps AI-900 Free Download

DumpsMaterials is a reputable platform that has been providing valid, real, updated, and free Microsoft Azure AI Fundamentals AI-900 Exam Questions for many years. DumpsMaterials is now the customer's first choice and has the best reputation in the market. Microsoft AI-900 Actual Dumps are created by experienced and certified professionals to provide you with everything you need to learn, prepare for, and pass the difficult Microsoft AI-900 exam on your first try.

## Microsoft Azure AI Fundamentals Sample Questions (Q26-Q31):

### NEW QUESTION # 26

You are developing a Chabot solution in Azure.

Which service should you use to determine a user's intent?

- A. Translator
- **B. Language**
- C. Speech
- D. Azure Cognitive Search

**Answer: B**

Explanation:

In Azure, the Language service unifies several natural language capabilities, including LUIS, QnA Maker, and Text Analytics, into

one comprehensive service. To determine a user's intent in a chatbot, you use the Conversational Language Understanding (CLU) feature of the Language service, which is the evolution of LUIS.

CLU helps chatbots and applications comprehend natural language input by identifying the intent (the purpose of the user's statement) and extracting entities (important details). For example, when a user types "Book a meeting for tomorrow," the model recognizes the intent (BookMeeting) and the entity (tomorrow).

The other options do not determine intent:

\* Translator (A) is used for language translation.

\* Azure Cognitive Search (B) retrieves documents based on search queries.

\* Speech (C) converts audio to text but doesn't analyze meaning.

Thus, to determine a user's intent in a chatbot scenario, the correct service is D. Language.

Reference:Microsoft Learn - "Build conversational language understanding models with Azure Language service."

### NEW QUESTION # 27

Which two components can you drag onto a canvas in Azure Machine Learning designer? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. dataset
- B. pipeline
- C. compute
- D. module

**Answer: A,D**

Explanation:

In Azure Machine Learning designer, a low-code drag-and-drop interface, users can visually build machine learning workflows. According to the AI-900 study guide and Microsoft Learn module "Create and publish models with Azure Machine Learning designer", two key components that can be dragged onto the designer canvas are datasets and modules.

\* Datasets (A): These are collections of data that serve as the input for training or evaluating models.

They can be registered in the workspace and then dragged onto the canvas for use in transformations or model training.

\* Modules (D): These are prebuilt processing and modeling components that perform operations such as data cleaning, feature engineering, model training, and evaluation. Examples include "Split Data,"

"Train Model," and "Evaluate Model."

Compute (B) and Pipeline (C) are not drag-and-drop items within the designer. Compute targets are infrastructure resources used to run the pipeline, while a pipeline represents the overall workflow, not a component that can be added like a dataset or module.

Hence, the correct answers are A. Dataset and D. Module.

Reference:Microsoft Learn - Create a machine learning model with Azure Machine Learning designer

### NEW QUESTION # 28

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

### NEW QUESTION # 29

You plan to apply Text Analytics API features to a technical support ticketing system.

Match the Text Analytics API features to the appropriate natural language processing scenarios.

To answer, drag the appropriate feature from the column on the left to its scenario on the right. Each feature may be used once, more than once, or not at all.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: Sentiment analysis

Sentiment Analysis is the process of determining whether a piece of writing is positive, negative or neutral.

Box 2: Broad entity extraction

Broad entity extraction: Identify important concepts in text, including key phrases and named entities such as people, places, and organizations.

Box 3: Entity Recognition

Named Entity Recognition: Identify and categorize entities in your text as people, places, organizations, date /time, quantities, percentages, currencies, and more. Well-known entities are also recognized and linked to more information on the web.

### NEW QUESTION # 30

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: Yes

Content Moderator is part of Microsoft Cognitive Services allowing businesses to use machine assisted moderation of text, images, and videos that augment human review.

The text moderation capability now includes a new machine-learning based text classification feature which uses a trained model to identify possible abusive, derogatory or discriminatory language such as slang, abbreviated words, offensive, and intentionally misspelled words for review.

Box 2: No

Azure's Computer Vision service gives you access to advanced algorithms that process images and return information based on the visual features you're interested in. For example, Computer Vision can determine whether an image contains adult content, find specific brands or objects, or find human faces.

Box 3: Yes

Natural language processing (NLP) is used for tasks such as sentiment analysis, topic detection, language detection, key phrase extraction, and document categorization.

Sentiment Analysis is the process of determining whether a piece of writing is positive, negative or neutral.
