You can spend a few minutes free downloading our demos to check it out. And you will be surprised by the high-quality.

Google Chrome-Enterprise-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.

Topic 2	<ul style="list-style-type: none"> • Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.
Topic 3	<ul style="list-style-type: none"> • Chrome Enterprise Management Fundamentals: This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed.
Topic 4	<ul style="list-style-type: none"> • Chrome Extensions: This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements.
Topic 5	<ul style="list-style-type: none"> • Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.

Use Genuine Google Chrome-Enterprise-Administrator Questions for your Exam Preparation

Subjects are required to enrich their learner profiles by regularly making plans and setting goals according to their own situation, monitoring and evaluating your study. Because it can help you prepare for the Chrome-Enterprise-Administrator exam. If you want to succeed in your exam and get the related exam, you have to set a suitable study program. If you decide to buy the Chrome-Enterprise-Administrator Study Materials from our company, we will have special people to advise and support you. Our staff will also help you to devise a study plan to achieve your goal.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which percentage of Chrome is recommended during Beta before general availability'?

- **A. 5%**
- B. 2%
- C. 10%
- D. 1%

Answer: A

Explanation:

While the exact percentage isn't explicitly stated in the provided material, industry best practices for software deployment, including browser updates, recommend testing in a Beta environment with a representative but limited subset of users before a full rollout. A common recommendation for Beta testing is around 5% of the user base. This provides sufficient feedback and issue detection without impacting the majority of users.

NEW QUESTION # 23

What report types are available in Google Chrome Enterprise Core on the Chrome Insights Report page'?

- **A. Browsers pending updates, Browsers without activity in the past 28 days, Browsers that have been recently enrolled**

- B. Device Fleet Hardware report, Browsers that need attention, Chromium browsers
- C. Devices that need attention, Devices that need to be purchased, Devices that have been used by family members
- D. Chromium browsers, Devices that need to be purchased, Devices that have been used by family members

Answer: A

Explanation:

The Chrome Insights Report in the Google Admin console provides visibility into the managed Chrome browser environment. Key report types available here include "Browsers pending updates" to identify devices needing patching, "Browsers without activity in the past 28 days" to understand browser usage, and "Browsers that have been recently enrolled" for monitoring onboarding. The other options list reports that are either not specific to Chrome Insights or related to device hardware rather than browser status.

NEW QUESTION # 24

An organization experiences a recent surge in account takeovers and suspicious activity. Upon investigation, a security team discovers that employees are falling victim to infostealer malware specifically designed to target Chrome browser cookies. This malware is spreading through phishing emails and compromised websites, and it is capable of stealing session cookies, login credentials, and other sensitive information stored in the browser. Which measure can an administrator implement using Chrome Enterprise Core to mitigate the risks posed by cookie theft?

- A. Disallow Chrome Sync and Require Incognito mode
- **B. Require Enhanced Safe Browsing and enable Application Bound Encryption**
- C. Invalidate user's session cookies and tokens by resetting the sign-in cookies from the Google Admin console
- D. Block the use of third-party cookies

Answer: B

Explanation:

To combat cookie theft from infostealer malware, requiring "Enhanced Safe Browsing" provides proactive protection against malicious websites and downloads that might distribute such malware. Enabling "Application Bound Encryption" adds an extra layer of security to cookies and other sensitive data stored by Chrome, making them harder for malware to use even if stolen. Blocking third-party cookies (option A) can improve privacy but doesn't directly prevent malware from stealing first-party session cookies. Invalidating existing cookies (option C) is a reactive measure and doesn't prevent future theft. Disallowing Chrome Sync and requiring Incognito mode (option D) changes user behavior but doesn't inherently protect against malware on the local machine.

NEW QUESTION # 25

To reduce risk, an organization is required to maintain a minimum Chrome browser version. The organization allows updates but finds that not all browsers are within one major version of the stable release.

Which policy option would help an admin enforce Chrome browser updates to the latest major stable version via automatic updates?

- A. Component updates
- B. Relaunch notification
- **C. Auto-update check period**
- D. Rollback to target version

Answer: C

Explanation:

While not directly stating "enforce to the latest major stable version," the "Auto-update check period" policy, when configured appropriately (shorter intervals), ensures that devices check for and apply updates more frequently. This increases the likelihood of browsers reaching and staying closer to the latest stable version over time. "Rollback to target version" is for reverting updates, "Component updates" manages specific browser components, and "Relaunch notification" prompts users to restart after an update.

NEW QUESTION # 26

An IT administrator manages a large organization that uses Chrome browser across multiple platforms including Windows, macOS, and Linux. The organization has diverse user needs and varying levels of risk associated with different departments, for which the

administrator must determine the most efficient method to manage Chrome updates across the organization Why is it advantageous to manage Chrome update policies using the Google Admin console instead of the Group Policy Management Console (GPMC)?

- **A. Group Policy does not support platforms other than Windows**
- B. Group Policy does not support Chrome update policies
- C. The Google Admin console does not allow administrators to view the browser version of any given managed device as Group Policy does
- D. The Google Admin console is only applicable to devices with ChromeOS, making it more secure

Answer: A

Explanation:

The key advantage of using the Google Admin console for managing Chrome updates in a multi-platform environment is its ability to apply policies consistently across Windows, macOS, and Linux devices. Group Policy (GPMC) is a Windows-specific tool and cannot natively manage Chrome updates on other operating systems. The Google Admin console provides a centralized and platform-agnostic approach to Chrome management.

NEW QUESTION # 27

.....

It is Chrome-Enterprise-Administrator exam qualification certification that gives you capital of standing in society and serving your company. Nowadays, using the Internet to study on our Chrome-Enterprise-Administrator exam questions has been a new trend of making people access to knowledge and capability-building.
