

最有效的C-BCBTP-2502認證，免費下載C-BCBTP-2502考試題庫得到妳想要的SAP證書

P.S. Testpdf在Google Drive上分享了免費的2026 SAP C-BCBTP-2502考試題庫：<https://drive.google.com/open?id=1XUp4gS8Bz7YfWHtRMbu9rb---WLPdcsu>

在Testpdf你可以很容易通過SAP C-BCBTP-2502考試。在您第一次嘗試參加SAP C-BCBTP-2502考試，選擇Testpdf的SAP C-BCBTP-2502訓練工具，下載SAP C-BCBTP-2502練習題和答案，會為你考試增加信心，將有效幫助你通過SAP C-BCBTP-2502考試。雖然其他線上網站也有關於SAP C-BCBTP-2502認證考試的相關的培訓工具，但我們的產品品質是非常好。我們的考試練習題和答案準確性高，培訓材料覆蓋面大，不斷的更新和彙編，可以為你提供一個準確性非常高的考試準備，選擇了Testpdf可以為你節約大量時間，可以讓你提早拿到SAP C-BCBTP-2502認證證書，可以提早讓你成為SAP IT行業中的專業人士。

SAP C-BCBTP-2502 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.
主題 2	<ul style="list-style-type: none">Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.

快速下載的C-BCBTP-2502認證與最新更正的SAP認證培訓 - 優質的SAP SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite

Testpdf是個很好的為 SAP C-BCBTP-2502 認證考試提供方便的網站。根據過去的考試練習題和答案的研究，它能有效的捕捉 SAP C-BCBTP-2502 認證考試試題內容。我們提供的 C-BCBTP-2502 考試練習題與真實的考試題有緊密的相似性。而且 C-BCBTP-2502 考題一直備受考生的稱贊，很多考生使用後，都知道出題高，讓他們順利過關。

最新的 SAP Certified Associate C-BCBTP-2502 免費考試真題 (Q18-Q23):

問題 #18

What is the primary function of SAP Business Process Intelligence?

- A. To manage API security and integrations.
- B. To store customer transactional data.
- **C. To analyze and optimize business processes using AI-driven insights.**
- D. To replace existing workflow automation tools.

答案: C

解題說明:

Before an organization can automate or improve its operations, it must first understand how its processes are actually running. The primary function of SAP Business Process Intelligence (largely centered around the SAP Signavio suite) is to analyze and optimize business processes using AI-driven insights. It provides

"Process Mining" capabilities that scan the data logs of the SAP Business Suite to reveal the "real" path a business process takes, often uncovering hidden bottlenecks, manual workarounds, and deviations from the standard procedure.

By positioning Business Process Intelligence as a starting point for digital transformation, SAP BTP allows organizations to make data-backed decisions about where to automate. For example, the tool might discover that a specific regional office takes twice as long to process purchase orders compared to the global average.

Using AI, it can identify the root cause-such as a lack of automation or incorrect master data-and recommend specific BTP services (like SAP Build) to fix the issue. This creates a cycle of continuous improvement, where processes are constantly monitored, analyzed, and optimized, ensuring that the SAP Business Suite operates at peak efficiency and remains aligned with the company's strategic goals.

問題 #19

Which SAP BTP product is critical for financial forecasting and analytics?

- A. SAP Fieldglass
- **B. SAP HANA Cloud**
- C. SAP Ariba
- D. SAP Business Network

答案: B

解題說明:

For financial forecasting to be effective, it requires the ability to process massive amounts of historical and real-time data with extreme speed. SAP HANA Cloud is the critical foundational product on SAP BTP that enables this. As a cloud-native, in-memory database, it allows for the convergence of transactional (OLTP) and analytical (OLAP) processing. This means that finance teams can run complex forecasting models directly on live transactional data without the need for time-consuming data transfers to separate data warehouses.

In the context of the SAP Business Suite, SAP HANA Cloud acts as the "single source of truth." It provides the high-performance data engine required by tools like SAP Analytics Cloud to perform predictive modeling and "what-if" simulations. Whether a company is predicting cash flow, modeling market volatility, or performing year-end consolidations, HANA Cloud ensures that the underlying data is accessible and processed in sub-seconds. This capability is essential for modern finance departments that must move from descriptive analytics (what happened) to predictive and prescriptive analytics (what will happen and what should we do). While Ariba and Fieldglass provide the source data for procurement and contingent labor, it is SAP HANA Cloud that provides the computational power necessary to turn that data into strategic financial insights.

問題 #20

Which SAP BTP services support AI-driven automation? (Choose two).

- **A. SAP Business Process Intelligence**
- **B. SAP AI Core**
- C. SAP Concur
- D. SAP Business Network

答案: A,B

解題說明：

AI-driven automation on SAP BTP is achieved through a combination of foundational infrastructure and process analysis tools. SAP AI Core is a key service that provides a dedicated runtime for AI workloads. It allows developers to manage the entire lifecycle of machine learning models-from training to deployment- at scale. It is designed to handle large datasets and complex computations while ensuring that AI models are transparent and compliant with enterprise standards. By using SAP AI Core, businesses can embed predictive capabilities directly into their business logic.

Complementing this is SAP Business Process Intelligence (part of the SAP Signavio suite). This service uses AI to "mine" data from existing business processes to identify inefficiencies, bottlenecks, and manual tasks that are prime candidates for automation. It provides the "sight" to see where automation is needed, while SAP AI Core provides the "brain" to execute intelligent decisions. Together, these services allow an organization to move beyond simple task automation toward intelligent process transformation. SAP Concur and SAP Business Network, while benefiting from these technologies, are SaaS applications rather than the underlying services that facilitate the creation and management of AI-driven automation workflows within the BTP ecosystem.

問題 #21

Which SAP BTP component supports microservices-based application development?

- A. SAP Kyma Runtime
- B. SAP Concur
- C. SAP SuccessFactors
- D. SAP Business Network

答案： A

解題說明：

As enterprises move toward modern, scalable application architectures, the move from monolithic codebases to microservices becomes essential. SAP Kyma Runtime is the specific component of SAP BTP designed to support this transition. It is a fully managed Kubernetes-based environment that allows developers to extend SAP applications using serverless functions and microservices. Kyma provides a cloud-native way to build and run containerized applications, offering high scalability and flexibility. Positioning Kyma within the SAP Business Suite ecosystem is critical for "side-by-side" extensibility. It allows developers to build specialized services-such as a custom loyalty engine or a unique logistics tracker-using their preferred programming languages and frameworks (like Node.js, Go, or Python) while maintaining a seamless connection to the SAP core. Kyma is particularly powerful for "event-driven" architectures; it can listen for events in SAP S/4HANA (like a "New Sales Order created" event) and instantly trigger a microservice to perform a specific action in a third-party system. This decouples the innovation layer from the stable core, allowing for rapid updates and deployments without risking the stability of the primary business processes.

問題 #22

Which of the following capabilities does SAP AI Core provide?

- A. Strictly rule-based automation without AI capabilities.
- B. Predictive analytics and machine learning model deployment.
- C. Transactional data management for ERP systems.
- D. Hardware infrastructure for AI development.

答案： B

解題說明：

SAP AI Core is a vital service within the "Intelligent Technologies" pillar of SAP BTP, designed to handle the heavy lifting of artificial intelligence at an enterprise scale. Its primary capability is providing a standardized, highly scalable runtime for predictive analytics and machine learning (ML) model deployment. In the modern SAP Business Suite, "intelligence" is no longer just a buzzword; it is a functional requirement. SAP AI Core allows businesses to take raw data from their systems, train sophisticated models, and then deploy those models into production environments where they can serve real-time predictions.

This service is unique because it supports the full lifecycle of an AI model, including execution and monitoring. It allows developers to integrate AI features into their applications while maintaining "AI Ethics" and transparency, which are critical for enterprise compliance. Unlike standard transactional databases that focus on record-keeping, SAP AI Core focuses on "inference"-using data to generate new insights and automate complex decisions. By positioning SAP AI Core as the engine for intelligence, SAP BTP ensures that organizations can move beyond basic automation toward advanced, self-learning processes that improve over time, such as predictive maintenance in manufacturing or intelligent lead scoring in sales.
