

Amazon ANS-C01 Valid Dump | Exam ANS-C01 Quiz

BONUS!!! Download part of ActualTorrent ANS-C01 dumps for free: https://drive.google.com/open?id=1OeLt7JCGounLUYb_3Uc1wyjncmjRJAak

There is a high demand for Amazon Development certification, therefore there is an increase in the number of Amazon ANS-C01 exam candidates. Many resources are available on the internet to prepare for the AWS Certified Advanced Networking Specialty Exam exam. ActualTorrent is one of the best certification exam preparation material providers where you can find newly released Amazon ANS-C01 Dumps for your exam preparation. With years of experience in compiling top-notch relevant Amazon ANS-C01 dumps questions, we also offer the Amazon ANS-C01 practice test (online and offline) to help you get familiar with the actual exam environment.

To be eligible for the ANS-C01 Certification Exam, candidates must have at least five years of experience in network architecture and a minimum of two years of experience using AWS services. They should also have a strong understanding of networking concepts, including TCP/IP, DNS, DHCP, and VPNs.

Achieving the ANS-C01 certification demonstrates the candidate's expertise in designing and implementing advanced networking solutions on AWS. It also shows that the candidate has a deep understanding of AWS services and how they can be used to create secure, scalable, and highly available networks. AWS Certified Advanced Networking Specialty Exam certification is highly valued by employers who are looking for skilled networking professionals to manage their AWS infrastructure.

2026 ANS-C01 Valid Dump 100% Pass | Latest ANS-C01: AWS Certified Advanced Networking Specialty Exam 100% Pass

If you are clueless about the oncoming exam, our ANS-C01 guide materials are trustworthy materials for your information. More than tens of thousands of exam candidate coincide to choose our ANS-C01 practice materials and passed their exam with satisfied scores, a lot of them even got full marks. According to the data that are proved and tested by our loyal customers, the pass rate of our ANS-C01 Exam Questions is high as 98% to 100%.

Amazon ANS-C01 Certification Exam is designed to test the knowledge and skills of professionals in advanced networking on Amazon Web Services (AWS). AWS Certified Advanced Networking Specialty Exam certification validates the expertise of individuals in designing and implementing scalable, highly available, and fault-tolerant network architectures on AWS.

Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q75-Q80):

NEW QUESTION # 75

A retail company operates its IT infrastructure in a hybrid cloud configuration with the on-premises data center connected to the AWS Cloud via an AWS Site-to-Site VPN connection. The networking team has set up an AWS VPC with a CIDR range of 172.31.0.0/16 and the on-premises network has a CIDR range of 172.31.1.0/24. The VPC's route table also has a propagated route to a virtual private gateway with a destination of 172.31.1.0/24. Which of the following represents a correct statement regarding the routing for traffic destined to the on-premises network? Response:

- A. All traffic destined for 172.31.1.0/24 is routed via the virtual private gateway
- B. The on-premises network would be unreachable as the local route would be preferred for all traffic destined for 172.31.1.0/24
- C. All traffic destined for 172.31.1.0/24 is routed via the virtual private gateway or the internet gateway
- D. All traffic destined for 172.31.1.0/24 is routed via the internet gateway

Answer: B

NEW QUESTION # 76

A customer is using ABC Telecom as a network provider. The customer has 10 different offices connected to ABC Telecom's MPLS backbone. The customer is setting up an AWS Direct Connect connection to AWS and has provided the LOA-CFA to ABC Telecom.

ABC Telecom has terminated the Direct Connect circuit into their MPLS backbone. To uniquely identify the customer's traffic over the MPLS backbone, the customer must encapsulate all traffic with VLAN tag

100. The customer wants to send traffic to multiple VPCs.

Which two steps should be taken to meet the customer's requirement?

(Select two.)

Response:

- A. Create a support ticket with AWS to request the removal of the outer VLAN tag 100 as the traffic reaches AWS routers.
- B. Send the traffic for all VPCs with the same VLAN tag 100 and use BGP to ensure that proper routing takes place to the appropriate VPC.
- C. The customer performs Q-in-Q tunneling, with the AWS-required VLAN tag in the inside and VLAN 100 as the outside tag.
- D. ABC Telecom creates a support ticket with AWS to exchange MPLS labels and include the AWS port as part of their MPLS network.
- E. ABC Telecom removes the other tag before sending the packet to AWS.

Answer: C,E

NEW QUESTION # 77

A company has deployed a new web application on Amazon EC2 instances behind an Application Load Balancer (ALB). The instances are in an Amazon EC2 Auto Scaling group. Enterprise customers from around the world will use the application. Employees of these enterprise customers will connect to the application over HTTPS from office locations.

The company must configure firewalls to allow outbound traffic to only approved IP addresses. The employees of the enterprise customers must be able to access the application with the least amount of latency.

Which change should a network engineer make in the infrastructure to meet these requirements?

- A. Create a new accelerator in AWS Global Accelerator. Add the ALB as an accelerator endpoint.
- B. Create a new Amazon Route 53 hosted zone. Create a new record to route traffic to the ALB.
- C. Create a new Amazon CloudFront distribution. Set the ALB as the distribution's origin.
- D. Create a new Network Load Balancer (NLB). Add the ALB as a target of the NLB.

Answer: C

Explanation:

Amazon CloudFront is a content delivery network (CDN) that can speed up the delivery of static and dynamic web content, such as

images, videos, and APIs². CloudFront can also provide end-to-end encryption for HTTPS traffic by using SSL certificates from AWS Certificate Manager (ACM) or other sources².

. CloudFront can also support session affinity (sticky sessions) with a load balancer-generated cookie or an application-based cookie policy².

NEW QUESTION # 78

A network architect is designing an internet website. It has web, application, and database tiers that will run in AWS. The website uses Amazon DynamoDB. What architecture will minimize public exposure of the back-end instances?

Response:

- A. A VPC with public subnets for the ALB, private subnets for the web tier, and private subnets for the application tier. The application tier connects DynamoDB through a VPC endpoint.
- B. A VPC with public subnets for the ALB, public subnets for the web tier, private subnets for the application tier, and private subnets for DynamoDB
- C. A VPC with public subnets for the NLB, public subnets for the web tier, private subnets for the application tier, and private subnets for DynamoDB
- D. A VPC with public subnets for the NLB, private subnets for the web tier, and public subnets for the application tier. The application tier connects DynamoDB through a VPC endpoint

Answer: A

NEW QUESTION # 79

A consulting company manages AWS accounts for its customers. One of the company's customers needs to add intrusion prevention for its environment without having to re-architect the environment. The customer's environment includes five VPCs in two AWS Regions in the United States. VPC-to-VPC connectivity is achieved through VPC peering. The customer does not plan to increase the number of VPCs within the next 2 years. The solution must accommodate unencrypted traffic.

Which solution will meet these requirements?

- A. Configure VPC security groups and network ACLs.
- B. Use an AWS Network Firewall distributed deployment model in each VPC.
- C. Deploy AWS Shield in each VPC.
- D. Use an AWS Network Firewall centralized deployment model in each VPC.

Answer: B

NEW QUESTION # 80
