## CS0-003 Valid Test Book & New CS0-003 Exam Dumps

In order to meet the needs of all customers that pass their exam and get related certification, the experts of our company have designed the updating system for all customers. Our CS0-003 exam question will be constantly updated every day. The IT experts of our company will be responsible for checking whether our CS0-003 exam prep is updated or not. Once our CS0-003 test questions are updated, our system will send the message to our customers immediately. If you use our CS0-003 Exam Prep, you will have the opportunity to enjoy our updating system. You will get the newest information about your exam in the shortest time. You do not need to worry about that you will miss the important information, more importantly, the updating system is free for you,

so hurry to buy our CS0-003 exam question, you will find it is a best choice for you.

## CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q500-Q505):

### NEW QUESTION # 500

The Chief Information Security Officer wants the same level of security to be present whether a remote worker logs in at home or at a coffee shop. Which of the following should be recommended as a starting point?

- A. Non-persistent virtual desktop infrastructures
- B. Passwordless authentication
- C. Standard-issue laptops
- D. Serverless workloads

**Answer: A**

Explanation:

Comprehensive and Detailed Step-by-Step Explanation: Non-persistent virtual desktop infrastructures (VDIs) are the most suitable choice to ensure consistent security across different locations. Non-persistent VDIs revert to their original state after a session, reducing the risk of data leakage or malware persistence. These systems are centrally managed, ensuring uniform security policies regardless of the user's location.

\* CompTIA CySA+ All-in-One Guide (Chapter 1: System and Network Architecture)

\* CompTIA CySA+ Objectives (Domain 1.1 - Infrastructure Concepts)

### NEW QUESTION # 501

A company has the following security requirements:

. No public IPs

All data secured at rest

. No insecure ports/protocols

After a cloud scan is completed, a security analyst receives reports that several misconfigurations are putting the company at risk.

Given the following cloud scanner output:

VM name	VM_DEV_DB	VM_PRD_Web01	VM_DEV_Web02	VM_PRD_DB
IP config	private	public	public	public
Encrypt	no	yes	yes	no
Ingress port	443, open	3289, open	22, open	80, open

Which of the following should the analyst recommend be updated first to meet the security requirements and reduce risks?

- A. VM\_PRD\_Web01
- B. VM\_DEV\_Web02
- C. VM\_DEV\_DB
- D. VM\_PRD\_DB

**Answer: A**

Explanation:

This VM has a public IP and an open port 80, which violates the company's security requirements of no public IPs and no insecure ports/protocols. It also exposes the VM to potential attacks from the internet. This VM should be updated first to use a private IP and close the port 80, or use a secure protocol such as HTTPS.

References[CompTIA CySA+ Study Guide: Exam CS0-003, 3rd Edition], Chapter 2: Cloud and Hybrid Environments, page 67. [What is a Public IP Address?][What is Port 80?]

#### NEW QUESTION # 502

Legacy medical equipment, which contains sensitive data, cannot be patched. Which of the following is the best solution to improve the equipment's security posture?

- A. Move the legacy systems behind a WAR
- B. Place the legacy systems in the perimeter network.
- C. Implement a VPN between the legacy systems and the local network.
- D. **Implement an air gap for the legacy systems.**

#### Answer: D

Explanation:

Implementing an air gap for the legacy systems is the best solution to improve their security posture. An air gap is a physical separation of a system or network from any other system or network that may pose a threat. An air gap can prevent any unauthorized access or data transfer between the isolated system or network and the external environment. Implementing an air gap for the legacy systems can help to protect them from being exploited by attackers who may take advantage of their unpatched vulnerabilities .

#### NEW QUESTION # 503

A vulnerability management team found four major vulnerabilities during an assessment and needs to provide a report for the proper prioritization for further mitigation. Which of the following vulnerabilities should have the highest priority for the mitigation process?

- A. A vulnerability that has no adversaries using it or associated IoCs
- B. A vulnerability that is related to an isolated system, with no IoCs
- C. **A vulnerability that is related to a specific adversary campaign, with IoCs found in the SIEM**
- D. A vulnerability that has related threats and IoCs, targeting a different industry

#### Answer: C

Explanation:

A vulnerability that is related to a specific adversary campaign, with IoCs found in the SIEM, should have the highest priority for the mitigation process. This is because it indicates that the vulnerability is actively being exploited by a known threat actor, and that the organization's security monitoring system has detected signs of compromise. This poses a high risk of data breach, service disruption, or other adverse impacts.

How to prioritize vulnerabilities step by step to avoid drowning in sea of problems; CompTIA CySA+ Study Guide: Exam CS0-003, 3rd Edition, Chapter 4: Security Operations and Monitoring, page 156.

#### NEW QUESTION # 504

A team of analysts is developing a new internal system that correlates information from a variety of sources, analyzes that information, and then triggers notifications according to company policy.

Which of the following technologies was deployed?

- A. IPS
- B. **SIEM**
- C. CERT
- D. SOAR

#### Answer: B

#### NEW QUESTION # 505
