P.S. Free & New AZ-204 dumps are available on Google Drive shared by DumpsTorrent: <https://drive.google.com/open?id=1IYQj0HBI5pQ4ojX42XGNfDA8I2TAJDHZ>

One Microsoft certification will help you get highly favor of large enterprises, it will bring you better opportunities. AZ-204 valid exam dumps PDF will be a stepping-stone for you to success. The most important method for passing exams is targeted learning and preparing. Programmatic learning may make you know professional knowledge better. But it will not only cost a lot of your time and energy but also can't guarantee you pass. Our AZ-204 Valid Exam Dumps PDF can help you pass exam for sure.

Microsoft AZ-204 Exam is designed for developers who want to demonstrate their expertise in developing solutions for Microsoft Azure. Developing Solutions for Microsoft Azure certification exam is ideal for individuals who have a strong understanding of Azure development, including Azure compute, storage, security, and networking services. AZ-204 exam tests the candidate's ability to design and develop solutions that integrate with Azure services, configure Azure services, and manage Azure resources.

How to study the AZ-204: Developing Solutions for Microsoft Azure Exam

Preparation of certification exams could be covered with two resource types . The first one are the study guides, reference books and study forums that are elaborated and appropriate for building information from ground up. Apart from them video tutorials and lectures are a good option to ease the pain of through study and are relatively make the study process more interesting nonetheless these demand time and concentration from the learner. Smart candidates who wish to create a solid foundation altogether examination topics and connected technologies typically mix video lectures with study guides to reap the advantages of each but practice exams or practice exam engines is one important study tool which goes typically unnoted by most candidates. Practice exams are designed with our experts to make exam prospects test their knowledge on skills attained in course, as well as prospects become comfortable and familiar with the real exam environment. Statistics have indicated exam anxiety plays much bigger role of students failure in exam than the fear of the unknown. DumpsTorrent expert team recommends preparing some notes on these topics along with it don't forget to practice **AZ-204 exam dumps** which had been written by our expert team, each of these can assist you loads to clear this exam with excellent marks.

Pass Guaranteed Quiz 2026 AZ-204: Developing Solutions for Microsoft

Azure – Professional Valid Dumps Sheet

It is apparent that a majority of people who are preparing for the AZ-204 exam would unavoidably feel nervous as the exam approaching. If you are still worried about the coming exam, since you have clicked into this website, you can just take it easy now, I can assure you that our company will present the antidote for you--our AZ-204 Learning Materials. Our company has spent more than 10 years on compiling study materials for the exam in this field, and now we are delighted to be here to share our study materials with all of the candidates for the exam in this field.

Microsoft AZ-204 certification exam is an essential certification for developers who want to validate their Azure development skills and advance their careers. Candidates who pass the exam demonstrate their proficiency in designing, developing, testing, and deploying Azure solutions, and they can benefit from better job opportunities, higher salaries, and career advancement. With the right preparation and resources, candidates can successfully pass the Microsoft AZ-204 Exam and earn this valuable certification.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q248-Q253):

NEW QUESTION # 248

Your company has several websites that use a company logo image. You use Azure Content Delivery Network (CDN) to store the static image.

You need to determine the correct process of how the CDN and the Point of Presence (POP) server will distribute the image and list the items in the correct order.

In which order do the actions occur? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

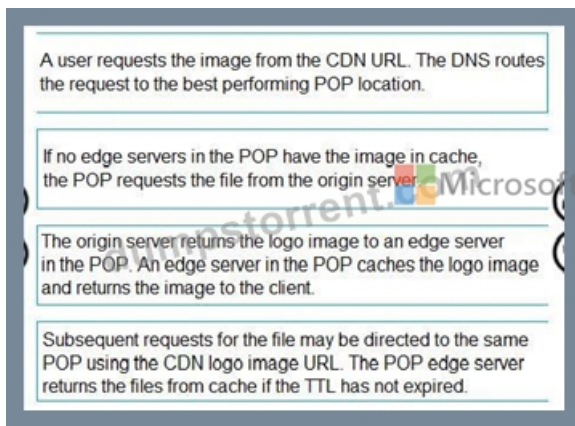

Actions	Answer Area
A user requests the image from the CDN URL. The DNS routes the request to the best performing POP location.	
Subsequent requests for the file may be directed to the same POP using the CDN logo image URL. The POP edge server returns the files from cache if the TTL has not expired.	
If no edge servers in the POP have the image in cache, the POP requests the file from the origin server.	
The origin server returns the logo image to an edge server in the POP. An edge server in the POP caches the logo image and returns the image to the client.	

Answer:

Explanation:

Actions	Answer Area
A user requests the image from the CDN URL. The DNS routes the request to the best performing POP location.	A user requests the image from the CDN URL. The DNS routes the request to the best performing POP location.
Subsequent requests for the file may be directed to the same POP using the CDN logo image URL. The POP edge server returns the files from cache if the TTL has not expired.	If no edge servers in the POP have the image in cache, the POP requests the file from the origin server.
If no edge servers in the POP have the image in cache, the POP requests the file from the origin server.	The origin server returns the logo image to an edge server in the POP. An edge server in the POP caches the logo image and returns the image to the client.
The origin server returns the logo image to an edge server in the POP. An edge server in the POP caches the logo image and returns the image to the client.	Subsequent requests for the file may be directed to the same POP using the CDN logo image URL. The POP edge server returns the files from cache if the TTL has not expired.

Explanation

Step 1: A user requests the image..

A user requests a file (also called an asset) by using a URL with a special domain name, such as <endpoint name>.azureedge.net. This name can be an endpoint hostname or a custom domain. The DNS routes the request to the best performing POP location, which is usually the POP that is geographically closest to the user.

Step 2: If no edge servers in the POP have the..

If no edge servers in the POP have the file in their cache, the POP requests the file from the origin server. The origin server can be an Azure Web App, Azure Cloud Service, Azure Storage account, or any publicly accessible web server.

Step 3: The origin server returns the..

The origin server returns the file to an edge server in the POP.

An edge server in the POP caches the file and returns the file to the original requestor (Alice). The file remains cached on the edge server in the POP until the time-to-live (TTL) specified by its HTTP headers expires. If the origin server didn't specify a TTL, the default TTL is seven days.

Step 4: Subsequent requests for..

Additional users can then request the same file by using the same URL that the original user used, and can also be directed to the same POP.

If the TTL for the file hasn't expired, the POP edge server returns the file directly from the cache. This process results in a faster, more responsive user experience.

NEW QUESTION # 249

A development team is developing an application. The application will be working with customer data.

The application will also be making use of Azure Redis Cache.

You need to invalidate the cache when the customer data is changed.

You have to complete the below code to comply with the requirement

```
void clearCustomerCache(string p_Customer)
{
    //Establish the cache connection
    Slot1
    //Invalidate the cache
    Slot2
}
```

Which of the following will go into Slot1?

- A. ICache cache=Connection.GetCache();
- B. IDatabase cache=Connection.GetCache();
- C. ICache cache=Connection.GetDatabase();
- D. IDatabase cache=Connection.GetDatabase();

Answer: D

Explanation:

The right way is to use the IDatabase interface. Also you need to use the GetDatabase() method. This is also mentioned in the Microsoft documentation.

```
static void Main(string[] args)
{
    // Connection refers to a property that returns a ConnectionMultiplexer
    // as shown in the previous example.
    IDatabase cache = lazyConnection.Value.GetDatabase();
}
```

Since this is clearly given in the Microsoft documentation, all other options are incorrect.

<https://docs.microsoft.com/en-us/azure/azure-cache-for-redis/cache-dotnet-how-to-use-azure-redis-cache>

NEW QUESTION # 250

You need to ensure that validation testing is triggered per the requirements.

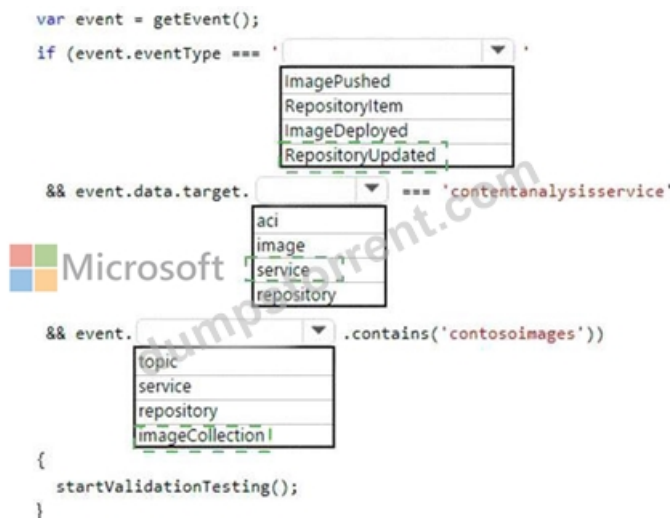

How should you complete the code segment? To answer, select the appropriate values in the answer area.

NOTE: Each correct selection is worth one point.

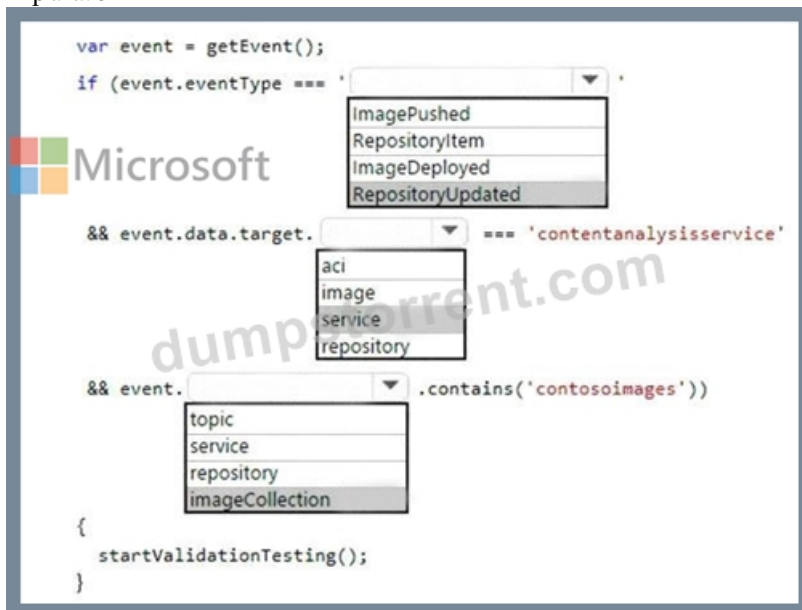

```
var event = getEvent();
if (event.eventType == 'ImagePushed'
    && event.data.target == 'contentanalysiservice'
    && event.topic.Contains('contosoimages'))
{
    startValidationTesting();
}
```

Answer:

Explanation:

Explanation

Box 1: RepositoryUpdated

When a new version of the ContentAnalysisService is available the previous seven days of content must be processed with the new version to verify that the new version does not significantly deviate from the old version.

Box 2: service

Box 3: imageCollection

<https://docs.microsoft.com/en-us/azure/devops/notifications/oob-supported-event-types>

NEW QUESTION # 251

You need to correct the VM issues.

Which tools should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Issue	Microsoft Tool
Backup and Restore	<div>▼</div> <div> Azure Site Recovery Azure Backup Azure Data Box Azure Migrate </div>
Performance	<div>▼</div> <div> Azure Network Watcher Azure Traffic Manager ExpressRoute Accelerated Networking </div>

Answer:

Explanation:

Issue	Tool
Backup and Restore	<div>▼</div> <div> Azure Site Recovery Azure Backup Azure Data Box Azure Migrate </div>
Performance	<div>▼</div> <div> Azure Network Watcher Azure Traffic Manager ExpressRoute Accelerated Networking </div>

Explanation

Issue	Tool
Microsoft Backup and Restore	<div>▼</div> <div> Azure Site Recovery Azure Backup Azure Data Box Azure Migrate </div>
Performance	<div>▼</div> <div> Azure Network Watcher Azure Traffic Manager ExpressRoute Accelerated Networking </div>

Backup and Restore: Azure Backup

Scenario: The VM is critical and has not been backed up in the past. The VM must enable a quick restore from a 7-day snapshot to include in-place restore of disks in case of failure.

In-Place restore of disks in IaaS VMs is a feature of Azure Backup.

Performance: Accelerated Networking

Scenario: The VM shows high network latency, jitter, and high CPU utilization.

Accelerated networking enables single root I/O virtualization (SR-IOV) to a VM, greatly improving its networking performance.

This high-performance path bypasses the host from the datapath, reducing latency, jitter, and CPU utilization, for use with the most demanding network workloads on supported VM types.

NEW QUESTION # 252

You are developing a new page for a website that uses Azure Cosmos DB for data storage. The feature uses documents that have the following format:

```
{
  "name": "John",
  "city": "Seattle"
}
```

You must display data for the new page in a specific order. You create the following query for the page:

```
SELECT*
FROM People p
ORDER BY p.name, p.city DESC
```

You need to configure a Cosmos DB policy to support the query.

How should you configure the policy? To answer, drag the appropriate JSON segments to the correct locations. Each JSON segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

JSON segments	Answer Area
<input type="text" value="orderBy"/>	<pre> { "automatic": true, "ngMode": "Consistent", "includedPaths": [{ "path": "/*" }], "excludedPaths": [], "compositeIndexes": [{ "path": "/name", "order": "descending" }, { "path": "/city", "order": " </pre>
<input type="text" value="sortOrder"/>	
<input type="text" value="ascending"/>	
<input type="text" value="descending"/>	
<input type="text" value="compositeIndexes"/>	

Answer:

Explanation:

JSON segments	Answer Area
<input type="text" value="orderBy"/>	<pre> { "automatic": true, "ngMode": "Consistent", "includedPaths": [{ "path": "/*" }], "excludedPaths": [], "compositeIndexes": [{ "path": "/name", "order": "descending" }, { "path": "/city", "order": " </pre>
