2026 Microsoft Trustable AZ-400: Reliable Designing and Implementing Microsoft DevOps Solutions Test Vce

We have 24/7 Service Online Support services, and provide professional staff Remote Assistance at any time if you have questions on our AZ-400 exam braindumps. Besides, if you need an invoice of our AZ-400 practice materials please specify the invoice information and send us an email. Online customer service and mail Service is waiting for you all the time. And you can download the trial of our AZ-400 training engine for free before your purchase.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q421-Q426):

NEW QUESTION # 421
You are monitoring the health and performance of an Azure web app by using Azure Application Insights.
You need to ensure that an alert is sent when the web app has a sudden rise in performance issues and failures. What should you use?

- A. Smart Detection
- B. Continuous export
- C. usage analysis
- D. Application Insights Profiler
- E. custom events

Answer: A

Explanation:
Smart Detection automatically warns you of potential performance problems and failure anomalies in your web application. It performs proactive analysis of the telemetry that your app sends to Application Insights. If there is a sudden rise in failure rates, or

abnormal patterns in client or server performance, you get an alert.

https://docs.microsoft.com/en-us/azure/azure-monitor/app/proactive-diagnostics

NEW QUESTION # 422

You have an Azure Kubernetes Service (AKSJ pod that hosts an app named App1.
You need to configure the AKS container to restart automatically if the container stops responding. The solution must check the status of App1 once every three seconds.
How should you complete the deployment? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 423

You are creating a build pipeline in Azure Pipelines.
You define several tests that might fail due to third-party applications.
You need to ensure that the build pipeline completes successfully if the third-party applications are unavailable.
What should you do?

- A. Add the Requirements quality widget to your dashboard
- B. Configure flaky tests
- C. Increase the test pass percentage
- D. Configure the build pipeline to use parallel jobs

Answer: A

Explanation:
Explanation
Requirements traceability is the ability to relate and document two or more phases of a development process, which can then be traced both forward or backward from its origin. Requirements traceability help teams to get insights into indicators such as quality of requirements or readiness to ship the requirement. A fundamental aspect of requirements traceability is association of the requirements to test cases, bugs and code changes.

NEW QUESTION # 424

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You manage a project in Azure DevOps.
You need to prevent the configuration of the project from changing over time.
Solution: Implement Continuous Assurance for the project.
Does this meet the goal?

- A. No
- B. Yes

Answer: B

Explanation:
Explanation
The basic idea behind Continuous Assurance (CA) is to setup the ability to check for "drift" from what is considered a secure

snapshot of a system. Support for Continuous Assurance lets us treat security truly as a
'state' as opposed to a 'point in time' achievement. This is particularly important in today's context when
'continuous change' has become a norm.
There can be two types of drift:
* Drift involving 'baseline' configuration: This involves settings that have a fixed number of possible states (often pre-defined/statically determined ones). For instance, a SQL DB can have TDE encryption turned ON or OFF...or a Storage Account may have auditing turned ON however the log retention period may be less than 365 days.
* Drift involving 'stateful' configuration: There are settings which cannot be constrained within a finite set of well-known states. For instance, the IP addresses configured to have access to a SQL DB can be any (arbitrary) set of IP addresses. In such scenarios, usually human judgment is initially required to determine whether a particular configuration should be considered 'secure' or not. However, once that is done, it is important to ensure that there is no "stateful drift" from the attested configuration. (E.g., if, in a troubleshooting session, someone adds the IP address of a developer machine to the list, the Continuous Assurance feature should be able to identify the drift and generate notifications/alerts or even trigger 'auto-remediation' depending on the severity of the change).

NEW QUESTION # 425
You have a tendril in Microsoft Azure Active Directory (Azure AD), part of Microsoft Entra. The tenant contains three groups named Group1. Group2, and Group3.
You create a new project in Azure DevOps named Project1.
You need to secure the service connections for Project1. The solution must meet the following requirements:
* The members of Group1 must be able to share and unshare a service connection with other projects.
* The members of Group2 must be able to rename a service connection and update the description.
* The members of Group3 must be able to use the service connection within build or release pipelines.
* The principle of least privilege must be followed.
Which permission should you grant to each group? To answer, drag the appropriate permissions to the correct groups. Each permission may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 426
......

While attempting the exam, take heed of the clock ticking, so that you manage the Microsoft AZ-400 Questions in a time-efficient way. Even if you are completely sure of the correct answer to a question, first eliminate the incorrect ones, so that you may prevent blunders due to human error.
