Best MB-820 Study Material - Exam MB-820 Simulator Fee
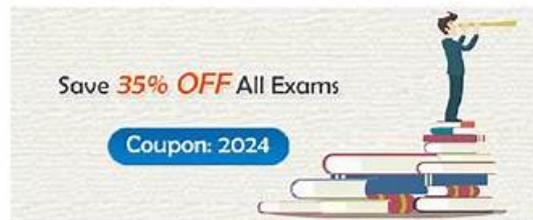

DOWNLOAD the newest CramPDF MB-820 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1njdMh803n0AP89pwWqGC7Ymknzdubw5N

In accordance with the actual exam, we provide the latest MB-820 exam dumps for your practices. With the latest MB-820 test questions, you can have a good experience in practicing the test. Moreover, you have no need to worry about the price, we provide free updating for one year and half price for further partnerships, which is really a big sale in this field. After your payment, we will send the updated MB-820 Exam to you immediately and if you have any question about updating, please leave us a message.

Microsoft MB-820 Exam Syllabus Topics:

Topic	Details
Topic 1	• Integrate Business Central with other applications: Accessing Representational State Transfer (REST) services is discussed in this topic. It also explains implementation of APIs.
Topic 2	• Develop by using AL: How to Customize the UI experience and Use AL for business central extension is discussed here. It also delves into explaining the essential development standards.

Topic 3	• Describe Business Central: Describing the components and capabilities of Business Central, and describing the core solution and extensions approach for Business Central are focal points of this topic. It also explains the difference between Business Central Online and Business Central on-premises features.

100% Pass Microsoft - MB-820 Authoritative Best Study Material

While most people would think passing Microsoft certification MB-820 exam is difficult. However, if you choose CramPDF, you will find gaining Microsoft certification MB-820 exam certificate is not so difficult. CramPDF training tool is very comprehensive and includes online services and after-sales service. Professional research data is our online service and it contains simulation training examination and practice questions and answers about Microsoft Certification MB-820 Exam. CramPDF's after-sales service is not only to provide the latest exam practice questions and answers and dynamic news about Microsoft MB-820 certification, but also constantly updated exam practice questions and answers and binding.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q119-Q124):

NEW QUESTION # 119
You are treating an app tor Business Central.
You plan to specify the following parameters and properties of the server and app.
* Startup object type and object ID
* Runtime
* Dependencies
You need to configure the JSON file for the specified parameters and properties Which JSON files should you configure? To answer, move the appropriate files to the correct object purposes You may use each file once, more than once, or not at all You may need to move the split bar between panes or scroll to view content NOTE Each correct selection is worth one point.

Answer:

Explanation:

Explanation:
Each JSON file has its own purpose in Business Central extensions:
* app.json
* Purpose: This file holds metadata about the application and contains configuration settings for dependencies and startup object information.
* Startup object type and object ID should be configured here.
* launch.json
* Purpose: This file defines how to run and debug the application during development.
* Runtime settings are configured here.
Final Answer (Drag and Drop):
* Startup object type and object ID # app.json

* Runtime # launch.json
* Dependencies # app.json

NEW QUESTION # 120

You are developing an XMLport to export data from the parent Item table and a related child "Item Unit of Measure' table. The XMLport configuration must provide the following:
* Link the child table to its parent.
* Display a confirmation message after the XMLport runs.
You need to generate the XMLport.
What should you do? To answer, move the appropriate triggers to the correct requirements. You may use each trigger once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Triggers		XMLport trigger		
OnAfterGetRecord			Requirement	Trigger
OnBeforeGetRecord			Trigger to link the child table to its parent	
OnPostXmlPort			Trigger to display a confirmation message after the XmlPort runs	
OnPreXmlItem				

Answer:

Explanation:

Triggers		XMLport trigger		
OnAfterGetRecord			Requirement	Trigger
OnBeforeGetRecord			Trigger to link the child table to its parent	OnAfterGetRecord
OnPostXmlPort			Trigger to display a confirmation message after the XmlPort runs	OnPostXmlPort
OnPreXmlItem				

Explanation:
To meet the XMLport configuration requirements:
* Link the child table to its parent: Use the OnAfterGetRecord trigger.
* Display a confirmation message after the XMLport runs: Use the OnPostXMLPort trigger.
In Business Central, when you are developing an XMLport for data export, triggers are used to perform actions at different stages of the XMLport's operation:
* OnAfterGetRecord Trigger:This trigger fires after a record is retrieved from the database but before it is processed for output in the XMLport. It is the ideal place to link child table records to their parent because you have access to the current record that can be used to set filters or modify data in the child table before it is written to the XML file.
* OnPostXMLPort Trigger:This trigger fires after the XMLport has finished processing all records. It is the correct place to display a confirmation message because it ensures that the message will appear after the entire XMLport operation is complete. Here, you can use application-specific functions to show the message, such as MESSAGE function in AL code.
By placing the appropriate triggers in these positions, you can ensure that the XMLport will link the child records to their parent records during the data export process and will notify the user with a confirmation message once the operation is successfully completed.

Triggers		XMLport trigger		
OnAfterGetRecord			Requirement	Trigger
OnBeforeGetRecord			Trigger to link the child table to its parent	Trigger
OnPostXmlPort			Trigger to display a confirmation message after the XmlPort runs	Trigger
OnPreXmlItem				

NEW QUESTION # 121

You need to create the access modifier for IssueTotal.
Which variable declaration should you use?

- A. Internal var IssueTotal: Decimal
- B. Public var IssueTotal: Decimal

- C. Protected vat IssueTotal: Decimal
- D. Local var IssueTotal: Decimal
- E. Var IssueTotal; Decimal

Answer: A

Explanation:
In Business Central development using AL (the language for Business Central extensions), the use of access modifiers defines how variables and procedures are accessed within and outside of an object or codeunit.
Access Modifiers in AL:
Public: A public variable can be accessed from any object or codeunit within the same module or extension.
Protected: This restricts access to the current object and objects that inherit from the current object. However, in AL (at least in versions used for Business Central), the Protected access modifier is used with methods but not variables.
Internal: This modifier restricts the visibility to the current extension. This means that variables or methods declared as internal can only be accessed from within the same extension. This is appropriate when you want to provide functionality that is shared within the extension but not exposed externally.
Local: This restricts the variable or method to the current object or method where it is declared. It cannot be accessed from anywhere else, even within the same extension.
Scenario Justification:
In the scenario for Contoso, Ltd., IssueTotal is a global variable in the ISSUE BASE extension, and the ISSUE EXT extension needs to access it. Therefore, the variable cannot be declared as Local, because this would restrict access to just the current object (or method).
Using Public would expose the variable outside of the extension, which is unnecessary because you only want other parts of the extension (specifically the ISSUE EXT extension) to have access.
The best choice in this case is Internal because it restricts access to the variable to within the same extension, which includes the base extension and any dependent extensions like ISSUE EXT. It strikes the right balance between visibility and encapsulation.
Microsoft Dynamics 365 Business Central Developer Reference:
Access Modifiers in AL: Microsoft's documentation on AL provides the details on access modifiers, where it is specified that internal variables can be accessed within the extension, and the public variable is accessible across all extensions【source: Microsoft Learn on AL Programming】.
Best Practices for AL Development: Business Central development best practices suggest keeping variables internal unless they need to be accessed outside of the current extension【source: Microsoft Learn on AL development guidelines】.

NEW QUESTION # 122
A company owns and operates hotels, restaurants, and stores.
When the staff orders materials from the purchasing department, the requests are not directed to the correct approvers.
The staff requires a new field named Approver from which they can select the appropriate approver. The field must include the following options:
* Hotel manager
* Restaurant manager
* Store manager
* Purchasing manager
You need to create the Approver field in the Item table by using an AL extension.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

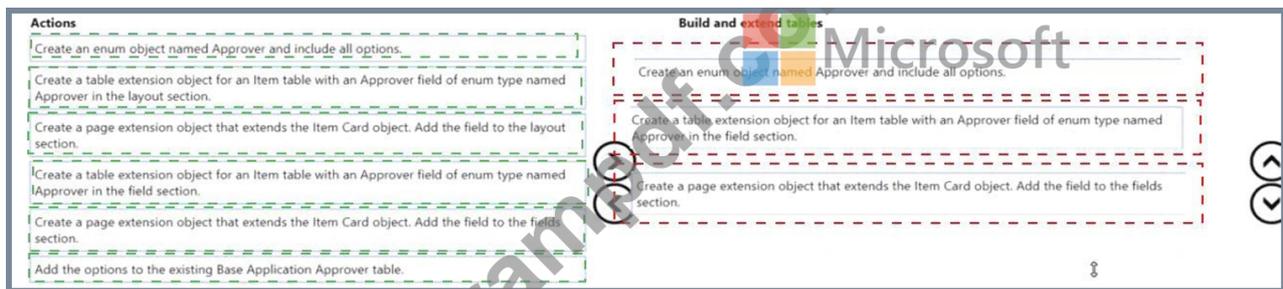

Answer:

Explanation:

Explanation:

To create the Approver field in the Item table using an AL extension, perform the following actions in sequence:

* Create an enum object named Approver and include all options.
* Create a table extension object for an Item table with an Approver field of enum type named Approver in the fields section.
* Create a page extension object that extends the Item Card object. Add the field to the fields section.

Build and extend tables:

To add a new field to an existing table in Business Central using AL extension, you need to define an enumeration (enum) with the possible values for the new field. Then, you create a table extension object where you add the new field and specify its type as the enum you created. This adds the field to the Item table. Finally, you modify the user interface to display the new field by creating a page extension for the Item Card page and adding the new field to it.

NEW QUESTION # 123

A company plans to meet new regulatory requirements.

The regulator has issued new tax tiers.

You need to update the base application table by using a table extension.

Which table field property can you change?

- A. AutoFormatType
- B. BlankZero
- C. CalcFormula
- D. DecimalPlaces

Answer: B

Explanation:

When updating the base application table using a table extension in Microsoft Dynamics 365 Business Central, certain properties of table fields can be modified to meet new requirements, such as regulatory changes. The DecimalPlaces property (B) is one such property that can be adjusted in a table extension. This property determines the number of decimal places that are displayed and stored for decimal fields in the table. Adjusting the DecimalPlaces property can be particularly useful when dealing with financial data and tax calculations that require precision to meet new tax tiers set by a regulator. It's important to note that not all properties can be modified in a table extension; for example, the CalcFormula property (A) cannot be changed as it affects how the field's value is calculated, which could have significant implications on the base application's logic.

NEW QUESTION # 124

......

The candidates all enjoy learning on our MB-820 practice exam study materials. Also, we have picked out the most important knowledge for you to learn. The difficult questions of the MB-820 study materials have detailed explanations such as charts, illustrations and so on. We have invested a lot of efforts to develop the MB-820 Training Questions. Please trust us. You absolutely can understand them after careful learning.
