## Apple App-Development-with-Swift-Certified-User更新版、App-Development-with-Swift-Certified-User最新知識

App-Development-with-Swift-Certified-User試験に実際に参加して資料を選択する前に、このような証明書を保持することの重要性を思い出してください。このようなApp-Development-with-Swift-Certified-User証明書を取得することで、昇給、昇進の機会、上司や同僚からの信頼など、将来の多くの同意結果を習得できます。これらすべての快い結果は、もはやあなたにとって夢ではありません。

## Apple App Development with Swift Certified User Exam 認定 App-Development-with-Swift-Certified-User 試験問題 (Q15-Q20):

### 質問 # 15

You have a set of Views within a ZStack that produce the screen below:

□ Arrange the lines of code that will make up the ZStack so that the View appears as shown.

□

正解:

解説:

□ Explanation:

□ This question belongs to View Building with SwiftUI, specifically stacking views and applying modifiers. A ZStack layers views from back to front, so the first item becomes the background and later items appear on top. To match the screenshot, the black

background must be the back layer, so `Color.black` goes first. The large white circle sits above that, so `Circle()` followed by `.foregroundColor(.white)` comes next. Finally, the red heart image sits on top of the circle, so `Image(systemName: "heart ").resizable()` followed by

`foregroundColor(.red).frame(width: 200, height: 200)` must be last. SwiftUI's `Image.resizable()` allows the symbol image to scale to the frame you apply, and `foregroundColor` sets the visible color styling for the shape and symbol.

So the intended structure is:

```
ZStack {
  Color.black
  Circle()
  .foregroundColor(.white)
  Image(systemName: "heart ").resizable()
  .foregroundColor(.red)
  .frame(width: 200, height: 200)
}
```

This produces a black background, a white circular shape, and a centered red heart on top, exactly as shown.

### 質問 # 16

For each statement about Navigation in SwiftUI, select True or False.

正解:

解説:

Explanation:

\* You can treat a `NavigationLink` like a button, and run some Swift code when it is pressed. - False

\* `NavigationSplitView` can be used to do navigation differently on different device sizes. - True

\* You can put a header on your present View in a `NavigationStack` using `.navigationTitle`. - True

\* If you have a `NavigationLink` that goes to another View with a `NavigationLink`, you need to declare a `NavigationStack` at each level. - False This question belongs to View Building with SwiftUI, specifically the objective on creating a multi-view app with navigation stacks, links, and sheets. Statement 1 is False because `NavigationLink` is primarily a navigation control that pushes or presents a destination in a navigation container; Apple documents it as creating a navigation link that presents a destination, not as a general-purpose action control like `Button`.

Statement 2 is True because `NavigationSplitView` is designed for adaptive navigation and can present navigation in different ways depending on platform and available space. Apple documents `NavigationSplitView` as a container for navigation across multiple columns, and this adaptive behavior is exactly why it is used differently across device sizes.

Statement 3 is True because `.navigationTitle(...)` sets the navigation title for a view shown inside a navigation container. Apple explicitly describes a view's navigation title as something used to visually display the current navigation state of an interface.

Statement 4 is False because you do not need a separate `NavigationStack` at every level. Apple describes `NavigationStack` as the container that manages a stack of views, and `NavigationLink` pushes additional destinations onto that stack. Nested destinations can keep navigating within the same stack.

### 質問 # 17

Complete the code by selecting the correct option from each drop-down list to create the following screen.

Note: You will receive partial credit for each correct answer.

正解:

解説:

### 質問 # 18

Which code correctly creates a size 300 rectangular Image View with rounded corners that displays the entire image, regardless of size?

- A.
- B.
- C.
- D.

正解: A

解説:

This question belongs to View Building with SwiftUI , specifically the objective on positioning and laying out a single SwiftUI view with standard views and modifiers.

The correct answer is D because it uses the right combination of SwiftUI image modifiers for all three requirements:

- \* the image is made resizable with `.resizable()`
- \* it is given rounded corners with `.clipShape(RoundedRectangle(cornerRadius: 50))`
- \* it displays the entire image with `.aspectRatio(contentMode: .fit)`
- \* it is sized with `.frame(width: 300)`

The key part is `.aspectRatio(contentMode: .fit)` . In SwiftUI, `.fit` scales the image so the whole image remains visible inside the available frame. That matches the requirement "displays the entire image, regardless of size." By contrast, `.fill` may crop part of the image, so options using `.fill` do not satisfy the requirement.

Why the others are wrong:

- \* Option A uses `.fill`, so the full image may not remain visible.
- \* Option B uses invalid modifiers such as `.sizabl()` and `.size(width: 300)`, and also uses `Rectangle (cornerRadius: 50)`, which is not the correct rounded-rectangle shape syntax.
- \* Option C also uses invalid syntax and `.fill`, which can crop the image.
- \* Option D uses valid SwiftUI syntax and the correct content mode.

So the correct choice is D , because it is the only option that correctly creates a 300-width image with rounded corners while ensuring the entire image is shown.

### 質問 # 19

Review the code snippet and then predict the output.

□

- A. Total count: 9
- B. Total count: 10
- C. Total count: 11
- D. Total count: 20

正解: B

解説:

This question belongs to Swift Programming Language , especially the domains covering control flow , loops , logical operators , and guard . The loop runs through `0.. < max`, and since `max = 101`, the values of `num` are 0 through 100. Inside the loop, the guard statement keeps only values that satisfy both conditions:

- \* `num % 5 == 0` # the number must be divisible by 5
- \* `num % 2 != 0` # the number must be odd

So the code counts numbers from 0 to 100 that are odd multiples of 5 . Those values are:

5, 15, 25, 35, 45, 55, 65, 75, 85, 95

That gives a total of 10 numbers. Therefore count becomes 10, and the printed output is:

Total count: 10

The key Swift concept here is that `guard ... else { continue }` skips any loop iteration that does not meet the required condition. Only matching values reach `count += 1`. This is a standard use of `guard` for early exit and of the remainder operator `%` for divisibility checks. Therefore, the correct answer is B .

### 質問 # 20

.....

成功の楽園にどうやって行きますか。ショートカットは一つしかありません。それは CertJuken の Apple の App-Development-with-Swift-Certified-User 試験トレーニング資料を利用することです。これは全ての IT 認証試験を受ける受験生のアドバイスです。CertJuken のトレーニング資料を手に入れたら、あなたは成功への鍵を握るようになります。
