Microsoft AZ-700최신 업데이트 덤프공부 - AZ-700시험패스 가능한 인증 공부

Microsoft인증 AZ-700시험을 준비하기 위해 잠도 설치하면서 많이 힘들죠? ITDumpsKR덤프가 고객님의 곁을 지켜드립니다. ITDumpsKR에서 제공해드리는Microsoft인증 AZ-700덤프는 실제Microsoft인증 AZ-700시험문제를 연구하여 만든 공부자료이기에 최고의 품질을 자랑합니다. ITDumpsKR덤프를 열심히 공부하여 멋진 IT전문가의 꿈을 이루세요.

AZ-700 시험은 Microsoft Certified: Azure Solutions Architect Expert 자격증의 일환입니다. 이 자격증은 Microsoft Azure에서 실행되는 솔루션을 설계하고 구현하는 전문가를 대상으로 합니다. 이 자격증을 취득하기 위한 후보자는 컴퓨팅, 스토리지, 네트워킹 및 보안을 포함한 Azure의 다양한 측면에 대한 전문 지식을 가지고 있어야합니다. AZ-700 시험은 이 자격증을 위한 필수 시험 중 하나이며, AZ-303 시험과 함께 수행해야합니다.

Azure 네트워킹 솔루션에 대한 전문 지식 수요를 충족시키기 위해, Microsoft는 AZ-700 시험: Microsoft Azure 네트워킹 솔루션 설계 및 구현을 도입했습니다. 이 시험은 Azure 네트워킹 솔루션에 능숙한 IT 전문가들을 대상으로 하며, 기술과 지식을 향상시키기를 원하는 네트워크 엔지니어, 아키텍트 및 관리자들이 Azure 네트워킹 솔루션 설계 및 구현 전문성을 강조하고자 할 때 이상적입니다.

최신 Microsoft Certified: Azure Network Engineer Associate AZ-700 무료샘플문제 (Q310-Q315):

질문 # 310

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure application gateway that has Azure Web Application Firewall (WAF) enabled.

You configure the application gateway to direct traffic to the URL of the application gateway.

You attempt to access the URL and receive an HTTP 403 error. You view the diagnostics log and discover the following error.

You need to ensure that the URL is accessible through the application gateway.

Solution: You create a WAF policy exclusion for request headers that contain 137.135.10.24.

Does this meet the goal?

- A. Yes
- B. No

정답: B

설명:

The parameter here should be RemoteAddr not Request header. <https://docs.microsoft.com/en-us/azure/web-application-firewall/ag/custom-waf-rules-overview#match-variable-required>

질문 # 311

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have two Azure virtual networks named Vnet1 and Vnet2.

You have a Windows 10 device named Client1 that connects to Vnet1 by using a Point-to-Site (P2S) IKEv2 VPN.

You implement virtual network peering between Vnet1 and Vnet2. Vnet1 allows gateway transit.

Vnet2 can use the remote gateway.

You discover that Client1 cannot communicate with Vnet2.

You need to ensure that Client1 can communicate with Vnet2.

Solution: You reset the gateway of Vnet1.

Does this meet the goal?

- A. Yes
- B. No

정답: B

설명:

About Point-to-Site VPN routing

If you make a change to the topology of your network and have Windows VPN clients, the VPN client package for Windows clients must be downloaded and installed again in order for the changes to be applied to the client.

질문 # 312

Task 4

You need to ensure that the owner of VNET3 receives an alert if an administrative operation is performed on the virtual network.

정답:

설명:

See the Explanation below for step by step instructions.

Explanation:

To ensure that the owner of VNET3 receives an alert whenever an administrative operation is performed on the virtual network, you can set up an Activity Log Alert in Azure Monitor. Here's how you can do it:

Step-by-Step Solution

Step 1: Create an Activity Log Alert

- * Navigate to the Azure Portal.
- * Search for "Monitor" and select it.
- * In the Monitor blade, select "Alerts" from the left-hand menu.
- * Click on "New alert rule".

Step 2: Configure the Alert Rule

- * Select the Scope:
 - * Click on "Select resource".
 - * Choose "Virtual Network" as the resource type.
 - * Select VNET3 from the list of virtual networks.
- * Define the Condition:
 - * Click on "Add condition".
 - * In the "Signal type" dropdown, select "Activity Log".
 - * Choose "Administrative" as the category.
 - * Select the specific operations you want to monitor (e.g., Microsoft.Network/virtualNetworks/write for any write operations on the virtual network).
- * Set the Alert Details:
 - * Enter a name for the alert rule (e.g., VNET3 Admin Operations Alert).
 - * Provide a description if needed.
- * Configure the Action Group:
 - * Click on "Add action group".
 - * Enter a name for the action group.
 - * Select the action type (e.g., Email/SMS/Push/Voice).
 - * Enter the details of the recipient (e.g., the email address of the owner of VNET3).
- * Review and Create:
 - * Review the alert rule settings.
 - * Click on "Create alert rule".

Explanation:

- * Activity Log Alerts: These alerts notify you when specific operations are performed on your Azure resources. By setting up an alert for administrative operations, you ensure that any changes to VNET3 are promptly reported.
- * Action Groups: These define the actions to take when an alert is triggered. You can configure notifications via email, SMS, or other methods to ensure the owner of VNET3 is informed immediately.
- * Administrative Operations: Monitoring these operations helps in tracking changes and maintaining the security and integrity of your virtual network.

By following these steps, you can ensure that the owner of VNET3 receives timely alerts for any administrative operations performed on the virtual network, helping to maintain oversight and security.

질문 # 313

You have two Azure subscriptions named Sub1 and Sub2 that contain the resources shown in the following table.

□ VNet1 and VNet2 are NOT connected.

You plan to create an Azure Private Link service named Link1 that will be used to connect VNet1 and VNet2.

You need to ensure that Link1 meets the following requirements:

- * Ensures that VM1 can connect only to a web app hosted on VM2
 - * Prevents VM1 from connecting to the other resources that are connected to VNet2
- Which additional resources should you create for each virtual network? To answer, drag the appropriate resources to the correct virtual networks. Each resource may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

□

정답:

설명:

□ Explanation:

□

질문 # 314

You configure a route table named RT1 that has the routes shown in the following table.

□ You have an Azure virtual network named Vnet1 that has the subnets shown in the following table.

□ You have the resources shown in the following table.

* 10.0.0.0/16

정답:
