

Fire-Inspector-II퍼펙트공부문제 - Fire-Inspector-II시험 패스인증덤프문제

Fire Inspector Practice Exam Questions and Answers Already Graded A

Which of the following is NOT considered to be a model code organization?

- A. National Fire Protection Association
- B. National Fire Academy
- C. International Code Council
- D. American Society of Mechanical Engineers ✓✓B. National Fire Academy

A prescriptive code does which of the following?

- A. List the specific details the installation or construction must meet
- B. Requires equipment to be installed for protection against a hazard
- C. Is interpreted locally
- D. Is a national standard ✓✓A. List the specific details the installation or construction must meet

What type of tanker typically transport 6,000 to 10,000 gallons of flammable and combustible materials?

Fire-Inspector-II 시험패스 인증덤프문제, Fire-Inspector-II퍼펙트 덤프 최신문제

일반적으로 Fire-Inspector-II 인증 시험은 IT업계 전문가들이 끊임없는 노력과 지금까지의 경험으로 연구하여 만들어

낸 제일 정확한 시험문제와 답들이니. 마침 우리Itcertkr 의 문제와 답들은 모두 이러한 과정을 거쳐서 만들어진 아주 완벽한 시험대비문제집들입니다. 우리의 문제집으로 여러분은 충분히 안전이 시험을 패스하실 수 있습니다. 우리 Itcertkr 의 문제집들은 모두 100%보장 도를 자랑하며 만약 우리Itcertkr의 제품을 구매하였다면International Code Council Fire-Inspector-II관련 시험패스와 자격증취득은 근심하지 않으셔도 됩니다. 여러분은 IT업계에서 또 한층 업그레이드 될것입니다.

최신 Fire Inspector Fire-Inspector-II 무료샘플문제 (Q62-Q67):

질문 # 62

Platforms used for access to aboveground tanks storing flammable or combustible liquids shall be:

- A. built of nonferrous, nonsparking metal.
- B. at least 4 ft. wide.
- C. built of noncombustible construction.
- D. located no closer than 3 ft. to the side of the tank.

정답: C

설명:

Platforms used for access to aboveground tanks storing flammable or combustible liquids are regulated by 2021 IFC, Section 5704 - Storage of Flammable and Combustible Liquids.

IFC 5704.2.7.4 - Access to Aboveground Tanks:

"Platforms, ladders, and stairways providing access to aboveground tanks storing flammable or combustible liquids shall be of noncombustible construction." This ensures that in case of fire, the access structures do not contribute to the spread of flames.

Why Other Options Are Incorrect?

A: At least 4 ft. wide. - The IFC does not specify a required width for platforms.

C: Built of nonferrous, nonsparking metal. - While important in hazardous areas, this is not a general requirement for platforms accessing aboveground tanks.

D: Located no closer than 3 ft. to the side of the tank. - There is no specific 3-ft. clearance requirement in the IFC for platforms.

질문 # 63

Incineration operations must comply with which of the following requirements?

- A. Incineration which creates an odor when burning requires a fire permit
- B. Operators must be at least 21 years of age
- C. Fuel-fired incinerators must be preheated for at least 20 minutes before use
- D. Incineration operations must stop if the fire code official determines that the odor is offensive to nearby residents

정답: D

설명:

IFC allows fire code officials to enforce odor control, requiring operations to stop if odors are offensive (D), aligning with public safety. Options A, B, and C are not standard requirements, with age limits (A) not specified, permits (B) not universally required for odors, and preheating time (C) not mandated. This fits the study guide's incineration regulations.

질문 # 64

Evidence of a fire inspection report being written and delivered to the person in charge of the property:

- A. must be retained by the code official for a minimum of three years.
- B. must be copied to the city manager or mayor's office.
- C. must be copied to the building code official.
- D. forms the basis for any legal action.

정답: D

설명:

Fire Inspection Report as Legal Documentation

A fire inspection report serves as an official record of inspection findings, compliance violations, and corrective actions required.

It provides documented evidence that can be used in legal proceedings if enforcement actions are necessary.

2. Legal Basis and ICC Reference

According to the International Fire Code (IFC) and NFPA Standards, a properly documented inspection report ensures that violations are enforceable in court.

The ICC Fire Inspector Study Guide (2021) emphasizes that an inspection report is a critical legal document that supports the fire department or authority having jurisdiction (AHJ) in case of disputes or appeals.

3. Retention of Reports (Why Other Options Are Incorrect)

Option B (must be copied to the building code official) - Not necessarily required unless local jurisdiction mandates coordination between fire and building code officials.

Option C (must be copied to the city manager or mayor's office) - Fire inspection reports are not typically sent to city administration unless they involve significant violations or policy concerns.

Option D (must be retained by the code official for a minimum of three years) - While record retention is required, the period varies by jurisdiction (some require 3 years, others more), making this an incomplete and less universally correct answer.

질문 # 65

All new building construction must have installed an approved water supply for fire protection which provides a minimum of:

- A. 250 gal. per minute at the fire-access outlet.
- B. a static pressure of 60 psi at each hydrant.
- C. a static pressure of 40 psi at each hydrant.
- **D. the required fire flow for fire protection.**

정답: D

설명:

All new building construction must have an approved water supply that meets the minimum fire flow requirements necessary for fire protection. The exact fire flow depends on factors such as building size, occupancy type, construction materials, and hazard levels.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 507.1 (Required Water Supply) IFC 507.1 states that an approved water supply capable of providing the required fire flow must be installed in all new construction projects.

The required fire flow varies based on building classification and must be determined by the authority having jurisdiction (AHJ).

2. 2021 IFC - Appendix B (Fire-Flow Requirements for Buildings)

Table B105.1(2) provides fire flow requirements based on construction type and building area.

Fire flow must be calculated according to the ISO (Insurance Services Office) Fire Suppression Rating Schedule.

Detailed Explanation of Answer Choices:

Option A (Correct): The fire flow requirement is determined based on the building and fire protection needs, making this the correct answer.

Option B (Incorrect): A static pressure of 40 psi at each hydrant is not a universal requirement, as fire flow is the primary factor.

Option C (Incorrect): A static pressure of 60 psi is not the fire code's general requirement; fire flow is the priority.

Option D (Incorrect): 250 gallons per minute (GPM) at a fire-access outlet is not an overall fire code requirement for all buildings-it depends on the structure's classification.

Thus, the correct and verified answer is: A. The required fire flow for fire protection.

질문 # 66

Which of the following situations requires securing of an operational permit from the code official prior to commencing the related activity?

- **A. Storing 85,000 bd. ft. of lumber.**
- B. Fruit ripening operations using carbon dioxide gas.
- C. Inside storage of 100 cu. ft. of baled cotton.
- D. Organic coating production facility producing 2 gallons per day.

정답: A

설명:

IFC Section 105.6 lists activities requiring operational permits. For A, lumber storage exceeding 100,000 board feet (bd. ft.) indoors or outdoors requires a permit (Section 105.6.28, Lumber Yards), but local thresholds may be lower-85,000 bd. ft. is close to this limit and likely exceeds typical exempt amounts, triggering a permit in many jurisdictions. For B, IFC Table 3206.2 allows small quantities of combustible commodities like baled cotton (100 cu. ft. is minimal) without a permit unless part of a larger high-piled storage operation. For C, fruit ripening with CO₂ (Section 105.6.13) requires a permit only for specific flammable gases, not CO₂ alone, which is nonflammable. For D, organic coating production (Section 105.6.33) requires a permit only above 1 gallon per day, but 2 gallons is still small-scale and context-dependent-lumber storage is the clearer permit trigger here. Thus, A is the best answer.

질문 # 67
