

CloudSec-Pro Latest Test Online | CloudSec-Pro Valid Braindumps Free

In this cut-throat competitive world of Palo Alto Networks, the Palo Alto Networks CloudSec-Pro certification is the most desired one. But what creates an obstacle in the way of the aspirants of the Palo Alto Networks Cloud Security Professional (CloudSec-Pro) certificate is their failure to find up-to-date, unique, and reliable Palo Alto Networks Cloud Security Professional (CloudSec-Pro) practice material to succeed in passing the Palo Alto Networks CloudSec-Pro certification exam.

Once the user has used our CloudSec-Pro test prep for a mock exercise, the product's system automatically remembers and analyzes all the user's actual operations. The user must complete the test within the time specified by the simulation system, and there is a timer on the right side of the screen, as long as the user begins the practice of CloudSec-Pro Quiz guide, the timer will run automatic and start counting. The transfer can be based on the CloudSec-Pro valid practice questions report to develop a learning plan that meets your requirements. As long as you study with our CloudSec-Pro exam questions, you will pass the exam.

CloudSec-Pro Valid Braindumps Free & Exam CloudSec-Pro Practice

TroytecDumps's Palo Alto Networks CloudSec-Pro Exam Training materials allows candidates to learn in the case of mock examinations. You can control the kinds of questions and some of the problems and the time of each test. In the site of TroytecDumps, you can prepare for the exam without stress and anxiety. At the same time, you also can avoid some common mistakes. So you will gain confidence and be able to repeat your experience in the actual test to help you to pass the exam successfully.

Palo Alto Networks Cloud Security Professional Sample Questions (Q209-Q214):

NEW QUESTION # 209

An administrator wants to install the Defenders to a Kubernetes cluster. This cluster is running the console on the default service endpoint and will be exporting to YAML.

Console Address: \$CONSOLE_ADDRESS Websocket Address: \$WEBSOCKET_ADDRESS User: \$ADMIN_USER

Which command generates the YAML file for Defender install?

- A. `<PLATFORM>/twistcli defender export kubernetes --address $CONSOLE_ADDRESS --user $ADMIN_USER --cluster-address $WEBSOCKET_ADDRESS`
- B. `<PLATFORM>/twistcli defender --address $CONSOLE_ADDRESS --user $ADMIN_USER -- cluster-address $CONSOLE_ADDRESS`
- C. `<PLATFORM>/twistcli defender YAML kubernetes --address $CONSOLE_ADDRESS --user $ADMIN_USER --cluster-address $WEBSOCKET_ADDRESS`
- D. `<PLATFORM>/twistcli defender export kubernetes --address $WEBSOCKET_ADDRESS --user $ADMIN_USER --cluster-address $CONSOLE_ADDRESS`

Answer: A

Explanation:

The correct command to generate the YAML file for Defender install in a Kubernetes cluster, considering the console and websocket addresses, as well as the admin user, would typically involve specifying the addresses and user details. The option D seems most aligned with standard practices for such commands, where you export the Defender configuration for Kubernetes, specifying the console and websocket addresses along with the user details.

NEW QUESTION # 210

A customer wants to monitor the company's AWS accounts via Prisma Cloud, but only needs the resource configuration to be monitored for now.

Which two pieces of information do you need to onboard this account? (Choose two.)

- A. External ID
- B. Subscription ID
- C. Active Directory ID
- **D. Cloudtrail**
- **E. Role ARN**

Answer: D,E

Explanation:

To onboard an AWS account into Prisma Cloud for the purpose of monitoring resource configurations, the necessary information includes the Role ARN (Amazon Resource Name) and CloudTrail setup. The Role ARN (Option E) is crucial because Prisma Cloud requires permission to access and monitor resources within the AWS account, which is facilitated through an IAM role that Prisma Cloud can assume. This IAM role must have the necessary permissions to access AWS services and resources that Prisma Cloud needs to monitor. CloudTrail (Option A) is essential for auditing and monitoring API calls within the AWS environment, including those related to resource configurations. It provides visibility into user and resource activity by recording API calls made on the account. CloudTrail logs are used by Prisma Cloud to detect changes in resource configurations and ensure compliance with security policies. Subscription ID (Option B) and Active Directory ID (Option C) are more relevant to Azure cloud environments, not AWS. External ID (Option D) is used in a cross-account role trust relationship to prevent the "confused deputy" problem, but it's not specifically required just to onboard the account for resource configuration monitoring.

NEW QUESTION # 211

Which policy type should be used to detect and alert on cryptominer network activity?

- A. Config-build
- **B. Anomaly**
- C. Audit event
- D. Config-run

Answer: B

Explanation:

To detect and alert on cryptominer network activity, the policy type that should be used is an Anomaly policy.

Anomaly policies in Prisma Cloud are designed to identify unusual and potentially malicious activities, including the network patterns typical of cryptomining operations. These policies leverage behavioral analytics to spot deviations from normal operations, making Option B the correct answer.

Suspicious network actors-Exposes suspicious connections by inspecting the network traffic to and from your cloud environment and correlating it with AutoFocus, Palo Alto Networks threat intelligence feed.

AutoFocus identifies IP addresses involved in suspicious or malicious activity and classifies them into one of eighteen categories.

Some examples of the categories are Backdoor, Botnet, Cryptominer, DDoS, Ransomware, Rootkit, and Worm. There are thirty-six policies, two for each of the eighteen categories- internal and external. <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/prisma-cloud-policies/anomaly-policies>

NEW QUESTION # 212

Which statement about build and run policies is true?

- A. Every type of policy has auto-remediation enabled by default.
- B. The four main types of policies are: Audit Events, Build, Network, and Run.
- **C. Build policies enable you to check for security misconfigurations in the IaC templates.**
- D. Run policies monitor network activities in the environment and check for potential issues during runtime.

Answer: C

Explanation:

A true statement about build and run policies is A. Build policies enable you to check for security misconfigurations in the IaC templates. This capability is crucial for identifying potential security issues early in the development process, allowing for proactive mitigation before deployment, thereby enhancing the overall security posture of the applications and infrastructure being developed.

NEW QUESTION # 213

How many CLI remediation commands can be added in a custom policy sequence?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

You can define up to 5 CLI commands in a sequence for a multi-step automatic remediation workflow. Add the commands in the sequence you want them to execute and separate the commands with a semi colon. If any CLI command included in the sequence fails, the execution stops at that point.

The Prisma Cloud platform allows administrators to define up to 5 CLI commands in a sequence for a multi- step automatic remediation workflow. These commands should be added in the order they are intended to be executed and must be separated by a semicolon. If any CLI command in the sequence fails during execution, the process stops at that point. This feature enables administrators to automate the remediation process efficiently and effectively, ensuring that actions are taken in a specific order to address alerts or compliance issues.

This capability is detailed in the Prisma Cloud documentation under the section for configuring Prisma Cloud to automatically remediate alerts. It's an important feature for maintaining security and compliance in cloud environments, as it allows for quick and automated responses to identified issues.

NEW QUESTION # 214

.....

The price for CloudSec-Pro training materials are reasonable, and no matter you are an employee in the company or a student at school, you can afford it. Besides CloudSec-Pro exam materials are high quality and accuracy, therefore, you can pass the exam just one time. In order to strengthen your confidence for CloudSec-Pro Exam Braindumps, we are pass guarantee and money back guarantee. We will give you full refund if you fail to pass the exam. We offer you free update for one year for CloudSec-Pro training materials, and the update version will be sent to your email address automatically.
