많은 사이트에서ISACA 인증AAIA 인증시험대비자료를 제공하고 있습니다. 그중에서 Pass4Test를 선택한 분들은 ISACA 인증AAIA시험통과의 지름길에 오른 것과 같습니다. Pass4Test는 시험에서 불합격성적표를 받으시면 덤프비용을 환불하는 서비스를 제공해드려 아무런 걱정없이 시험에 도전하도록 힘이 되어드립니다. Pass4Test덤프를 사용하여 시험에서 통과하신 분이 전해주시는 희소식이 Pass4Test 덤프품질을 증명해드립니다.

ISACA AAIA 시험요강:

주제	소개
주제 1	• AI GOVERNANCE AND RISK: It encompasses understanding different AI models and their life cycles, guiding AI strategy, defining roles and policies, managing AI-related risks, overseeing data privacy and governance, and ensuring adherence to ethical practices, standards, and regulations.
주제 2	• AI Operations: It covers managing AI-specific data needs—including collection, quality, security, and classification—applying development lifecycle methodologies with privacy and security by design, change and incident management, testing AI solutions, identifying AI-related threats and vulnerabilities, and supervising AI deployments.
주제 3	• Auditing Tools and Techniques: This section of the exam measures the skills of AI auditors and centers on auditing AI systems using appropriate tools and methods. It includes audit planning and design, sampling methodologies specific to AI, collecting audit evidence, using data analytics for quality assurance, and producing AI audit outputs and reports, including follow-up and quality control measures.

최신 Advanced in AI Audit AAIA 무료 샘플문제 (Q135-Q140):

질문 # 135

When an IS auditor is reviewing results from an AI system, which of the following would cause the GREATEST risk?

- A. Inability to identify where an AI system is housed
- B. System output not being checked for inconsistencies
- C. Difficulty of documenting AI algorithm processes
- D. Cascading failures of AI system outputs

정답: B

질문 # 136

An IS auditor is evaluating an organization's incident management program to ensure it is sufficiently prepared to manage AI-related incidents. Which of the following is MOST important for the auditor to validate?

- A. The program includes processes to respond to AI model drift and data integrity attacks.
- B. The program mandates retraining AI systems after incidents are investigated.
- C. The program prioritizes incidents based on alignment with industry leading practices.
- D. The program uses past AI-related incidents and resolutions to categorize current incidents.

정답: A

질문 # 137

An IS auditor reviewing documentation for an AI model notes that the modeler utilized a K-means clustering algorithm, which clusters data into categories for correlations and analysis. Which of the following is the MOST important risk for the auditor to consider?

- A. K-means clustering requires the modeler to supervise the learning analysis, which can introduce bias.
- B. K-means clustering is not a common data clustering method due to its complexity and difficulty categorizing data correctly.
- C. K-means clustering determines the number of clusters for the modeler without supervision.
- D. K-means clustering algorithms are significantly sensitive to outliers and dependent on the similarity of units of measure.

정답: D

질문 # 138

An IS auditor notes that an AI model achieved significantly better results on training data than on test data.

Which of the following problems with the model has the IS auditor identified?

- A. Bias
- **B. Overfitting**
- C. Generalization
- D. Underfitting

정답: B

설명:

Overfitting occurs when a model performs very well on training data but poorly on unseen data, indicating that the model has learned patterns specific to the training set rather than generalizing effectively. The AAIA™ Study Guide identifies overfitting as a common problem that impacts model reliability.

"Overfitting limits the model's applicability to real-world scenarios. It reflects excessive tailoring to the training data and poor performance on new, diverse inputs." Underfitting (A) would result in poor performance on both training and test data.

Generalization (C) is the desired state, and bias (D) is a separate issue. Therefore, B is correct.

질문 # 139

An IS auditor is evaluating an organization's data governance controls for its AI system. Which of the following represents the GREATEST risk in this context?

- A. Limited frequency of AI system performance and data accuracy reviews
- B. Inconsistent data management practices
- **C. Inadequate controls over data accuracy and privacy compliance**
- D. Lack of procedures for automated data backup

정답: C

설명:

In AI systems, data accuracy and privacy are foundational to both performance and regulatory compliance.

Inadequate controls over data accuracy and privacy compliance (D) pose the greatest risk, as they can lead to incorrect decisions, legal violations, regulatory penalties, and significant reputational damage. AAIA emphasizes that data governance programs must ensure data is accurate, secure, lawfully processed, and appropriately protected throughout the AI life cycle.

Option A (inconsistent practices) is concerning but is often a symptom of underlying governance weaknesses; its impact is most severe when it affects accuracy and privacy. Option B focuses on backup procedures, which are important for availability and resilience, but not as central to AI decision quality and legal risk. Option C (limited performance and accuracy reviews) is serious but again narrower than outright inadequacy of key controls over accuracy and privacy.
