## SPLK-1004 Pdf Dumps, SPLK-1004 Exam Dumps Free

According to the survey, the average pass rate of our candidates has reached 99%. High passing rate must be the key factor for choosing, which is also one of the advantages of our SPLK-1004 real study dumps. Our SPLK-1004 exam questions have been widely acclaimed among our customers, and the good reputation in industry prove that choosing our study materials would be the best way for you, and help you gain the SPLK-1004 Certification successfully. With about ten years' research and development we still keep updating our SPLK-1004 prep guide, thus your study process would targeted and efficient.

Splunk SPLK-1004 Certification is an advanced-level certification that is designed to test the proficiency of individuals in using Splunk tools and features. Splunk Core Certified Advanced Power User certification is intended for advanced users of Splunk who want to demonstrate their knowledge and skills in the area of Splunk Core. Splunk Core Certified Advanced Power User certification is a globally recognized credential that is highly valued in the industry.

## Splunk Core Certified Advanced Power User Sample Questions (Q52-Q57):

### NEW QUESTION # 52

Which of the following is accurate about cascading inputs?

- A. Inputs added to panels can not participate.
- B. Only the final input of the sequence can supply a token to searches.
- C. The final input has no impact on previous inputs.
- **D. They can be reset by an event handler.**

**Answer: D**

Explanation:

Cascading inputs in Splunk dashboards allow the selection in one input (like a dropdown, radio button, etc.) to determine the available options in the subsequent input, creating a dependent relationship between them. An event handler can be configured to reset subsequent inputs based on the selection made in a preceding input (Option A), ensuring that only relevant options are presented to the user as they make selections. This approach enhances the dashboard's usability by guiding the user through a logical flow of choices, where each selection refines the scope of the following options.

### NEW QUESTION # 53

What is the result of the xyseries command?

- **A. To transform a stats-like output into chart-like output.**
- B. To transform a chart-like output into a stats-like output.
- C. To transform a multi-series output into single series output.
- D. To transform single series output into a multi-series output.

**Answer: A**

Explanation:

The xyseries command in Splunk transforms a stats-like output into a chart-like output, making it easier to visualize complex relationships between multiple data points.

### NEW QUESTION # 54

Repeating JSON data structures within one event will be extracted as what type of fields?

- A. Single value
- B. Lexicographical
- C. Mvindex
- **D. Multivalue**

**Answer: D**

Explanation:

When Splunk encounters repeating JSON data structures in an event, they are extracted as multivalue fields.

These allow multiple values to be stored under a single field, which is common with arrays in JSON data.

When Splunk extracts repeating JSON data structures within a single event, it represents them as multivalue fields. A multivalue field is a field that contains multiple values, which can be iterated over or expanded using commands like `mvexpand` or `foreach`.

Here's why this works:

**JSON Data Extraction:** Splunk automatically parses JSON data into fields. If a JSON key has an array of values (e.g., "products": ["productA", "productB", "productC"]), Splunk creates a multivalue field for that key.

**Multivalue Fields:** These fields allow you to handle multiple values for the same key within a single event.

For example, if the JSON key `products` contains an array of product names, Splunk will store all the values in a single multivalue field named `products`.

```
{
  "event": "purchase ",
  "products": ["productA", "productB", "productC "]
}
```

### NEW QUESTION # 55

What is the correct hierarchy of XML elements in a dashboard panel?

- A. <dashboard><panel><row>
- B. <panel><dashboard><row>
- C. <panel><row><dashboard>
- D. <dashboard><row><panel>

**Answer: D**

Explanation:

The correct XML hierarchy for a dashboard panel is <dashboard><row><panel>. The <dashboard> element contains rows, and within each <row>, there are panels that hold visualizations or searches.

### NEW QUESTION # 56

Which element attribute is required for event annotation?

- A. <search style="annotation">
- B. <search type="annotation">
- C. <search type=\$annotation\$>
- D. <search type="event\_annotation">

**Answer: B**

Explanation:

In Splunk dashboards, event annotations require the attribute <search type="annotation"> to define an event annotation, which marks significant events on visualizations like timelines.
