Newest IAPP Detail Explanation – the Best Accurate Exam CIPT Review

The IAPP CIPT desktop practice exam software simulates a real test environment and familiarizes you with the actual test format. This IAPP CIPT practice exam software tracks your progress and performance, allowing you to see how much you've improved over time. We frequently update the IAPP CIPT Practice Exam software with the latest IAPP CIPT DUMPS PDF.

IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q238-Q243):

NEW QUESTION # 238

Which is NOT a drawback to using a biometric recognition system?

- A. It can be more expensive than other systems
- B. It can require more maintenance and support.
- C. It is difficult for people to use.
- D. It has limited compatibility across systems.

Answer: C

Explanation:

Biometric recognition systems can face several challenges, but user difficulty is not generally considered a significant drawback. The main drawbacks typically include higher costs, increased maintenance and support requirements, and limited compatibility across different systems. Biometrics can sometimes also raise privacy concerns and require substantial infrastructure to support effectively. However, ease of use is often seen as a benefit of biometric systems since they can be more intuitive than traditional passwords or PINs.

NEW QUESTION # 239

Which of the following would best improve an organization's system of limiting data use?

- A. Confirming implied consent for any secondary use of data.
- B. Applying audit trails to resources to monitor company personnel.
- C. Implementing digital rights management technology.
- D. Instituting a system of user authentication for company personnel.

Answer: B

NEW QUESTION # 240

SCENARIO

Please use the following to answer next question:

EnsureClaim is developing a mobile app platform for managing data used for assessing car accident insurance claims. Individuals use the app to take pictures at the crash site, eliminating the need for a built-in vehicle camera. EnsureClaim uses a third-party hosting provider to store data collected by the app. EnsureClaim customer service employees also receive and review app data before sharing with insurance claim adjusters.

The app collects the following information:

First and last name

Date of birth (DOB)

Mailing address

Email address

Car VIN number

Car model

License plate

Insurance card number

Photo

Vehicle diagnostics

Geolocation

The app is designed to collect and transmit geolocation data. How can data collection best be limited to the necessary minimum?

- A. Present a clear and explicit explanation about need for the geolocation data.
- B. Allow user to opt-out geolocation data collection at any time.
- C. Obtain consent and capture geolocation data at all times after consent is received.
- D. Allow access and sharing of geolocation data only after an accident occurs.

Answer: D

Explanation:

To ensure that data collection is limited to the necessary minimum, the app should only collect geolocation data when it is essential for its primary function, which in this case is assessing car accident insurance claims.

By allowing access and sharing of geolocation data only after an accident occurs, EnsureClaim minimizes the collection of potentially sensitive location data, adhering to the principle of data minimization. This approach ensures that geolocation data is only collected when it is directly relevant to the purpose of the app, thus protecting user privacy.

NEW QUESTION # 241

What risk is mitigated when routing video traffic through a company's application servers, rather than sending the video traffic directly from one user to another?

- A. The user is protected against phishing attacks.
- **B. The user's approximate physical location is hidden from the other user.**
- C. The user is assured that stronger authentication methods have been used.
- D. The user's identity is protected from the other user.

Answer: B

Explanation:

* Option A: Phishing attacks are typically related to email or messaging security rather than direct video traffic.

* Option B: While identity protection can be a factor, routing through company servers primarily obfuscates the user's IP address and other metadata, which reveals physical location rather than identity specifics.

* Option C: Routing video traffic through a company's servers hides the users' IP addresses from each other, which prevents them from determining each other's physical location.

* Option D: Stronger authentication methods are related to access control but not necessarily to the routing of video traffic.

* IAPP CIPT Study Guide

* Network security principles related to traffic routing

NEW QUESTION # 242

Which activity best supports the principle of data quality from a privacy perspective?

- A. Ensuring the data is classified.
- B. Ensuring the data is available for use.
- **C. Protecting the data against unauthorized changes.**
- D. Protecting the data against unauthorized access.

Answer: C

Explanation:

protecting data against unauthorized changes best supports the principle of data quality from a privacy perspective. This helps ensure that the data remains accurate and reliable.

NEW QUESTION # 243

.....

With three versions of products, our CIPT learning questions can satisfy different taste and preference of customers with different use: PDF & Software & APP versions. Without ambiguous points of questions make you confused, our CIPT practice materials can convey the essence of the content suitable for your exam. With the most scientific content and professional materials CIPT Preparation materials are indispensable helps for your success. Such a valuable acquisition priced reasonably is offered before your eyes, you can feel assured to take good advantage of.
