Exam Salesforce Data-Architect Practice - Data-Architect Latest Exam Simulator

The committed team of the Prep4sureExam is always striving hard to resolve any confusion among its users. The similarity between our Salesforce Data-Architect exam questions and the real Salesforce Data-Architect certification exam will amaze you. The similarity between the Prep4sureExam Data-Architect pdf questions and the actual Data-Architect certification exam will help you succeed in obtaining the highly desired Salesforce Certified Data Architect (Data-Architect) certification on the first go. You will

notice the above features in the Salesforce Data-Architect Web-based format too. There is no need to go through time-taking installations or agitating plugins to use this format.

Salesforce Certified Data Architect Sample Questions (Q36-Q41):

NEW QUESTION # 36

Northern Trail Outfitters (NTO) has recently implemented Salesforce to track opportunities across all their regions. NTO sales teams across all regions have historically managed their sales process in Microsoft Excel. NTO sales teams are complaining that their data from the Excel files were not migrated as part of the implementation and NTO is now facing low Salesforce adoption. What should a data architect recommend to increase Salesforce adoption?

- A. Create a chatter group and upload all Excel files to the group.
- **B. Define a standard mapping and train sales users to import opportunity data.**
- C. Use the Excel connector to Salesforce to sync data from individual Excel files.
- D. Load data in external database and provide access to database to sales users.

Answer: B

NEW QUESTION # 37

Universal Containers (UC) is migrating data from legacy system to Salesforce. During data analysis it was discovered that data types of fields being migrated do not match with Salesforce data types.

Which solution should a data architect use to ensure successful data migrations?

- A. Export legacy data into the staging database and leverage stored procedures to transform data types before loading into Salesforce.
- **B. Migrate the legacy data leveraging an ETL tool to transform data types and load data into Salesforce.**
- C. Migrate legacy data to a staging database for mapping then leverage an ETL tool to transform the data and load into Salesforce.
- D. Export legacy data into CSV files and leverage data loader to load data into Salesforce.

Answer: B

NEW QUESTION # 38

Universal Containers has a large volume of Contact data going into Salesforce.com. There are 100,000 existing contact records. 200,000 new contacts will be loaded. The Contact object has an external ID field that is unique and must be populated for all existing records. What should the architect recommend to reduce data load processing time?

- A. Load all records via the Upsert operation to determine new records vs. existing records.
- **B. Load new records via the Insert operation and existing records via the Update operation.**
- C. Delete all existing records, and then load all records together via the Insert operation.
- D. Load Contact records together using the Streaming API via the Upsert operation.

Answer: B

Explanation:

Loading new records via the Insert operation and existing records via the Update operation will allow using the external ID field as a unique identifier and avoid any duplication or overwriting of records. This is faster and safer than deleting all existing records or using the Upsert operation, which might cause conflicts or errors

.

NEW QUESTION # 39

A national nonprofit organization is using Salesforce to recruit members. The recruitment process requires a member to be matched with a volunteer opportunity. Given the following:

1. A record is created in Project__c and used to track the project through completion.
2. The member may then start volunteering and is required to track their volunteer hours, which is stored in VTOTime__c object related to the project.
3. Ability to view or edit the VTOTime__c object needs to be the same as the Project__c record.

4. Managers must see total hours volunteered while viewing the Project__c record.

Which data relationship should the data architect use to support this requirement when creating the custom VTOTime__c object?

- A. Lookup field on VTOTime__c to Project__c with formula field on Project__c showing Sum of hours from VTOTime__c records.
- **B. Master Detail Field on VTOTime__c to Project__c with rollup summary field on Project__c showing sum of hours from VTOTime__c records.**
- C. Master Detail field on Project__c to VTOTime__c showing a list of VTOTime__c Records in a related list.
- D. Lookup Field on Project__c to VTOTime__c displaying a list of VTOTime__c in a related list.

Answer: B

NEW QUESTION # 40

Universal Containers is setting up an external Business Intelligence (BI) system and wants to extract 1,000,000 Contact records. What should be recommended to avoid timeouts during the export process?

- A. Schedule a Batch Apex job to export the data.
- **B. Use GZIP compression to export the data.**
- C. Utilize the Bulk API to export the data.
- D. Use the SOAP API to export data.

Answer: B

Explanation:

According to the exam guide, one of the objectives is to "describe the use cases and considerations for using various tools and techniques for data migration (for example, Data Loader, Bulk API)". This implies that option B is the correct way to extract large volumes of data from Salesforce. The Bulk API is designed to handle large-scale data operations and avoid timeouts. Option A is not correct because the SOAP API is not optimized for large data sets and may encounter limits. Option C is not correct because GZIP compression does not prevent timeouts, but rather reduces the size of the data transferred. Option D is not correct because Batch Apex is used to process records asynchronously in Salesforce, not to export data to an external system.

NEW QUESTION # 41

.....

We are determined to give hand to the candidates who want to pass their Data-Architect exam smoothly and with ease by their first try. Our professional experts have compiled the most visual version of our Data-Architect practice materials: the PDF version, which owns the advantage of convenient to be printed on the paper. Besides, you can take notes on it whenever you think of something important. The PDF version of our Data-Architect study quiz will provide you the most flexible study experience to success.
