

# Real Databricks Databricks-Generative-AI-Engineer-Associate Exam Questions: Ensure Your Success

Our professions endeavor to provide you with the newest information on our Databricks-Generative-AI-Engineer-Associate exam questions with dedication on a daily basis to ensure that you can catch up with the slight changes of the Databricks-Generative-AI-Engineer-Associate exam. Therefore, our customers are able to enjoy the high-productive and high-efficient users' experience. In this circumstance, as long as your propose and demand on Databricks-Generative-AI-Engineer-Associate Guide quiz are rational, we have the duty to guarantee that you can enjoy the one-year updating system for free.

The ActualCollection offers three formats of study materials for the Databricks Certified Generative AI Engineer Associate (Databricks-Generative-AI-Engineer-Associate) certification exam preparation. Our product is designed by experts in their respective fields, ensuring that our customers receive the most up-to-date and accurate Databricks Databricks-Generative-AI-Engineer-Associate Exam Questions.

## Training Databricks-Generative-AI-Engineer-Associate Material & Databricks-Generative-AI-Engineer-Associate Valid Test Tips

The reality is often cruel. What do we take to compete with other people? More useful certifications like Databricks-Generative-AI-Engineer-Associate certificate? In this era of surging talent, why should we stand out among the tens of thousands of graduates and be hired by the company? Perhaps the few qualifications you have on your hands are your greatest asset, and the Databricks-Generative-AI-Engineer-Associate Test Prep is to give you that capital by passing exam fast and obtain certification soon. Don't doubt about it. More useful certifications mean more ways out. If you pass the Databricks-Generative-AI-Engineer-Associate exam, you will be welcome by all companies which have relating business with Databricks-Generative-AI-Engineer-Associate exam torrent.

## Databricks Certified Generative AI Engineer Associate Sample Questions (Q20-Q25):

### NEW QUESTION # 20

A Generative AI Engineer is building a RAG application that will rely on context retrieved from source documents that are currently in PDF format. These PDFs can contain both text and images. They want to develop a solution using the least amount of lines of code.

Which Python package should be used to extract the text from the source documents?

- A. flask
- B. unstructured

- C. beautifulsoup
- D. numpy

**Answer: B**

Explanation:

\* Problem Context: The engineer needs to extract text from PDF documents, which may contain both text and images. The goal is to find a Python package that simplifies this task using the least amount of code.

\* Explanation of Options:

\* Option A: flask: Flask is a web framework for Python, not suitable for processing or extracting content from PDFs.

\* Option B: beautifulsoup: Beautiful Soup is designed for parsing HTML and XML documents, not PDFs.

\* Option C: unstructured: This Python package is specifically designed to work with unstructured data, including extracting text from PDFs. It provides functionalities to handle various types of content in documents with minimal coding, making it ideal for the task.

\* Option D: numpy: Numpy is a powerful library for numerical computing in Python and does not provide any tools for text extraction from PDFs.

Given the requirement, Option C(unstructured) is the most appropriate as it directly addresses the need to efficiently extract text from PDF documents with minimal code.

**NEW QUESTION # 21**

A Generative AI Engineer is tasked with developing an application that is based on an open source large language model (LLM).

They need a foundation LLM with a large context window.

Which model fits this need?

- A. DistilBERT
- B. MPT-30B
- C. DBRX
- D. **Llama2-70B**

**Answer: D**

Explanation:

\* Problem Context: The engineer needs an open-source LLM with a large context window to develop an application.

\* Explanation of Options:

\* Option A: DistilBERT: While an efficient and smaller version of BERT, DistilBERT does not provide a particularly large context window.

\* Option B: MPT-30B: This model, while large, is not specified as being particularly notable for its context window capabilities.

\* Option C: Llama2-70B: Known for its large model size and extensive capabilities, including a large context window. It is also available as an open-source model, making it ideal for applications requiring extensive contextual understanding.

\* Option D: DBRX: This is not a recognized standard model in the context of large language models with extensive context windows.

Thus, Option C(Llama2-70B) is the best fit as it meets the criteria of having a large context window and being available for open-source use, suitable for developing robust language understanding applications.

**NEW QUESTION # 22**

A Generative AI Engineer is designing a chatbot for a gaming company that aims to engage users on its platform while its users play online video games.

Which metric would help them increase user engagement and retention for their platform?

- A. Randomness
- B. **Diversity of responses**
- C. Repetition of responses
- D. Lack of relevance

**Answer: B**

Explanation:

In the context of designing a chatbot to engage users on a gaming platform, diversity of responses(option B) is a key metric to increase user engagement and retention. Here's why:

\* Diverse and Engaging Interactions: A chatbot that provides varied and interesting responses will keep users engaged, especially in

an interactive environment like a gaming platform. Gamers typically enjoy dynamic and evolving conversations, and diversity of responses helps prevent monotony, encouraging users to interact more frequently with the bot.

\* Increasing Retention: By offering different types of responses to similar queries, the chatbot can create a sense of novelty and excitement, which enhances the user's experience and makes them more likely to return to the platform.

\* Why Other Options Are Less Effective:

\* A (Randomness): Random responses can be confusing or irrelevant, leading to frustration and reducing engagement.

\* C (Lack of Relevance): If responses are not relevant to the user's queries, this will degrade the user experience and lead to disengagement.

\* D (Repetition of Responses): Repetitive responses can quickly bore users, making the chatbot feel uninteresting and reducing the likelihood of continued interaction.

Thus, diversity of responses (option B) is the most effective way to keep users engaged and retain them on the platform.

## NEW QUESTION # 23

A Generative AI Engineer needs to design an LLM pipeline to conduct multi-stage reasoning that leverages external tools. To be effective at this, the LLM will need to plan and adapt actions while performing complex reasoning tasks.

Which approach will do this?

- A. Use a Chain-of-Thought (CoT) prompting technique to guide the LLM through a series of reasoning steps, then manually input the results from external tools for the final answer.
- B. **Implement a framework like ReAct which allows the LLM to generate reasoning traces and perform task-specific actions that leverage external tools if necessary.**
- C. Train the LLM to generate a single, comprehensive response without interacting with any external tools, relying solely on its pre-trained knowledge.
- D. Encourage the LLM to make multiple API calls in sequence without planning or structuring the calls, allowing the LLM to decide when and how to use external tools spontaneously.

### Answer: B

Explanation:

The task requires an LLM pipeline for multi-stage reasoning with external tools, necessitating planning, adaptability, and complex reasoning. Let's evaluate the options based on Databricks' recommendations for advanced LLM workflows.

\* Option A: Train the LLM to generate a single, comprehensive response without interacting with any external tools, relying solely on its pre-trained knowledge

\* This approach limits the LLM to its static knowledge base, excluding external tools and multi-stage reasoning. It can't adapt or plan actions dynamically, failing the requirements.

\* Databricks Reference: "External tools enhance LLM capabilities beyond pre-trained knowledge" ("Building LLM Applications with Databricks," 2023).

\* Option B: Implement a framework like ReAct which allows the LLM to generate reasoning traces and perform task-specific actions that leverage external tools if necessary

\* ReAct (Reasoning + Acting) combines reasoning traces (step-by-step logic) with actions (e.g., tool calls), enabling the LLM to plan, adapt, and execute complex tasks iteratively. This meets all requirements: multi-stage reasoning, tool use, and adaptability.

\* Databricks Reference: "Frameworks like ReAct enable LLMs to interleave reasoning and external tool interactions for complex problem-solving" ("Generative AI Cookbook," 2023).

\* Option C: Encourage the LLM to make multiple API calls in sequence without planning or structuring the calls, allowing the LLM to decide when and how to use external tools spontaneously

\* Unstructured, spontaneous API calls lack planning and may lead to inefficient or incorrect tool usage. This doesn't ensure effective multi-stage reasoning or adaptability.

\* Databricks Reference: Structured frameworks are preferred. "Ad-hoc tool calls can reduce reliability in complex tasks" ("Building LLM-Powered Applications").

\* Option D: Use a Chain-of-Thought (CoT) prompting technique to guide the LLM through a series of reasoning steps, then manually input the results from external tools for the final answer

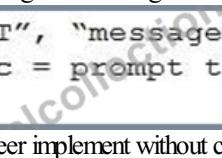

\* CoT improves reasoning but relies on manual tool interaction, breaking automation and adaptability. It's not a scalable pipeline solution.

\* Databricks Reference: "Manual intervention is impractical for production LLM pipelines" ("Databricks Generative AI Engineer Guide").

Conclusion: Option B (ReAct) is the best approach, as it integrates reasoning and tool use in a structured, adaptive framework, aligning with Databricks' guidance for complex LLM workflows.

## NEW QUESTION # 24

After changing the response generating LLM in a RAG pipeline from GPT-4 to a model with a shorter context length that the company self-hosts, the Generative AI Engineer is getting the following error:

```
{"error_code": "BAD_REQUEST", "message": "Bad request: rpc error: code = InvalidArgument desc = prompt token count (4595) cannot exceed 4096..."}
```

What TWO solutions should the Generative AI Engineer implement without changing the response generating model? (Choose two.)

- A. Reduce the maximum output tokens of the new model
- B. Retrain the response generating model using ALiBi
- C. Decrease the chunk size of embedded documents
- D. Use a smaller embedding model to generate
- E. Reduce the number of records retrieved from the vector database

**Answer: C,E**

Explanation:

\* Problem Context: After switching to a model with a shorter context length, the error message indicating that the prompt token count has exceeded the limit suggests that the input to the model is too large.

\* Explanation of Options:

\* Option A: Use a smaller embedding model to generate- This wouldn't necessarily address the issue of prompt size exceeding the model's token limit.

\* Option B: Reduce the maximum output tokens of the new model- This option affects the output length, not the size of the input being too large.

\* Option C: Decrease the chunk size of embedded documents- This would help reduce the size of each document chunk fed into the model, ensuring that the input remains within the model's context length limitations.

\* Option D: Reduce the number of records retrieved from the vector database- By retrieving fewer records, the total input size to the model can be managed more effectively, keeping it within the allowable token limits.

\* Option E: Retrain the response generating model using ALiBi- Retraining the model is contrary to the stipulation not to change the response generating model.

Options C and E are the most effective solutions to manage the model's shorter context length without changing the model itself, by adjusting the input size both in terms of individual document size and total documents retrieved.

## NEW QUESTION # 25

.....

On one hand, our Databricks-Generative-AI-Engineer-Associate study questions can help you increase the efficiency of your work. In the capital market, you are more efficient and you are more favored. Entrepreneurs will definitely hire someone who can do more for him. On the other hand, our Databricks-Generative-AI-Engineer-Associate Exam Materials can help you pass the exam with 100% guarantee and obtain the certification. As we all know, an international Databricks-Generative-AI-Engineer-Associate certificate will speak louder to prove your skills.

**Training Databricks-Generative-AI-Engineer-Associate Material:** <https://www.actualcollection.com/Databricks-Generative-AI-Engineer-Associate-exam-questions.html>

You just need to spend about twenty to thirty hours before taking the real Databricks-Generative-AI-Engineer-Associate exam. Especially for those time-sensitive and busy candidates, all three versions of Databricks-Generative-AI-Engineer-Associate practice materials can be chosen based on your preference. You get awareness about the Databricks-Generative-AI-Engineer-Associate real exam environment because the Databricks-Generative-AI-Engineer-Associate practice exam has an actual exam-like pattern. These Databricks-Generative-AI-Engineer-Associate exam questions remove the need for you to spend time on unnecessary or irrelevant material, allowing you to complete your Databricks-Generative-AI-Engineer-Associate certification exam preparation swiftly.

But why can't the 'Employee' class simply provide a 'compareTo' Databricks-Generative-AI-Engineer-Associate method without implementing the 'Comparable' interface, You'll never look at your TV the same way again.

You just need to spend about twenty to thirty hours before taking the Real Databricks-Generative-AI-Engineer-Associate Exam. Especially for those time-sensitive and busy candidates, all three versions of Databricks-Generative-AI-Engineer-Associate practice materials can be chosen based on your preference.

# **Databricks-Generative-AI-Engineer-Associate Unlimited Exam Practice Free PDF | High Pass-Rate Training Databricks-Generative-AI-Engineer-Associate Material: Databricks Certified Generative AI Engineer Associate**

You get awareness about the Databricks Databricks-Generative-AI-Engineer-Associate real exam environment because the Databricks-Generative-AI-Engineer-Associate practice exam has an actual exam-like pattern. These Databricks Databricks-Generative-AI-Engineer-Associate exam questions remove the need for you to spend time on unnecessary or irrelevant material, allowing you to complete your Databricks-Generative-AI-Engineer-Associate certification exam preparation swiftly.
