AZ-900 Training Tools | AZ-900 Online Exam

Immediately after you have made a purchase for our AZ-900 practice dumps, you can download our exam study materials to make preparations for the exams. It is universally acknowledged that time is a key factor in terms of the success of exams. The more time you spend in the preparation for AZ-900 Training Materials, the higher possibility you will pass the exam. As you can see, we have

invested big amount of money to give the most convinience for you to get our AZ-900 exam braindumps.

The AZ-900 Exam is a foundational-level exam, meaning that it is an entry-level certification that does not require any prior experience or prerequisites. AZ-900 exam consists of 40-60 multiple-choice questions, and candidates have 85 minutes to complete it. The cost of the exam is \$99 USD, and it can be taken at any Microsoft testing center or online through a remote proctoring service.

Microsoft Azure Fundamentals Sample Questions (Q87-Q92):

NEW QUESTION # 87

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
With a consumption-based plan, you pay a fixed rate for all data sent to or from virtual machines hosted in the cloud.	<input type="radio"/>	<input type="radio"/>
With a consumption-based plan, you reduce overall costs by paying only for extra capacity when it is required.	<input type="radio"/>	<input type="radio"/>
Serverless computing is an example of a consumption-based plan.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
With a consumption-based plan, you pay a fixed rate for all data sent to or from virtual machines hosted in the cloud.	<input type="radio"/>	<input checked="" type="radio"/>
With a consumption-based plan, you reduce overall costs by paying only for extra capacity when it is required.	<input checked="" type="radio"/>	<input type="radio"/>
Serverless computing is an example of a consumption-based plan.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Statements	Yes	No

With a consumption-based plan, you reduce overall costs by paying only for extra capacity when it is required.	<input checked="" type="radio"/>	<input type="radio"/>
Serverless computing is an example of a consumption-based plan.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION # 88

You plan to deploy several Azure virtual machines.

You need to control the ports that devices on the Internet can use to access the virtual machines.

What should you use?

- A. an Azure Active Directory group
- B. an Azure Active Directory (Azure AD) role
- C. a network security group (NSG)
- D. an Azure key vault

Answer: C

Explanation:

Section: Describe general security and network security features

Explanation:

A network security group works like a firewall. You can attach a network security group to a virtual network and/or individual subnets within the virtual network. You can also attach a network security group to a network interface assigned to a virtual machine. You can use multiple network security groups within a virtual network to restrict traffic between resources such as virtual machines and subnets.

You can filter network traffic to and from Azure resources in an Azure virtual network with a network security group. A network security group contains security rules that allow or deny inbound network traffic to, or outbound network traffic from, several types of Azure resources.

NEW QUESTION # 89

You plan to create an Azure virtual machine.

You need to identify which storage service must be used to store the data disks of the virtual machine.

What should you identify? To answer, select the appropriate service in the answer area.

Answer Area

The screenshot shows a grid of four storage service cards. The top-left card is for 'Blobs' (REST-based object storage for unstructured data). The top-right card is for 'Files' (File shares that use the standard SMB 3.0 protocol). The bottom-left card is for 'Tables' (Tabular data storage). The bottom-right card is for 'Queues' (Effectively scale apps according to traffic). Each card has a 'Learn more' link at the bottom.

Answer:

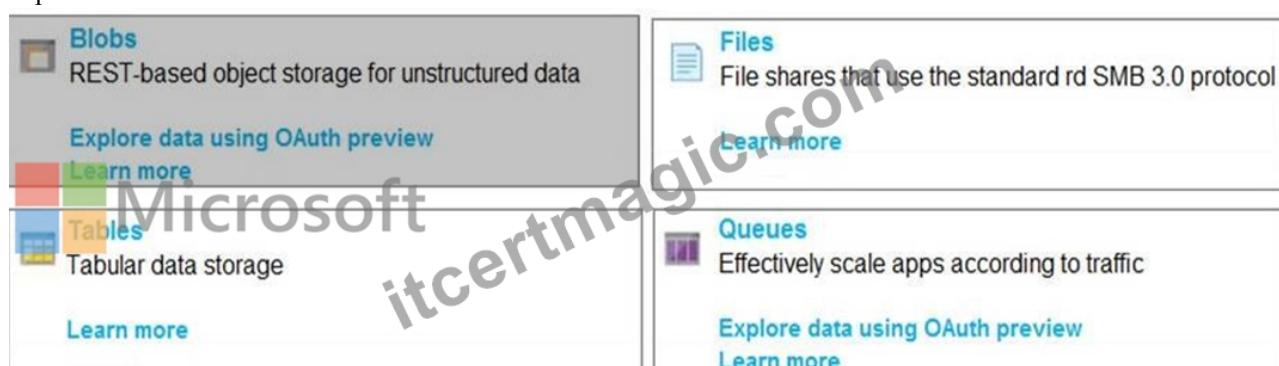

Explanation:

Answer Area

The screenshot shows the same storage service cards as the previous one, but with a green dashed box highlighting the 'Blobs' card. This indicates that 'Blobs' is the correct answer to the question.

Explanation

The screenshot shows detailed descriptions for each storage service. The 'Blobs' card is described as 'REST-based object storage for unstructured data' with links to 'Explore data using OAuth preview' and 'Learn more'. The 'Tables' card is described as 'Tabular data storage' with a 'Learn more' link. The 'Files' card is described as 'File shares that use the standard SMB 3.0 protocol' with a 'Learn more' link. The 'Queues' card is described as 'Effectively scale apps according to traffic' with links to 'Explore data using OAuth preview' and 'Learn more'.

NEW QUESTION # 90

Select the answer that correctly completes the sentence.

Answer Area

The screenshot shows a policy definition for a resource group. The 'Not Allowed Resource Type' is set to 'virtual networks'. A note states: 'You have an Azure virtual network named VNET1 in a resource group named RG1.' Below this, it says: 'You assign the Azure Policy definition of Not Allowed Resource Type and specify that virtual networks are not an allowed resource type in RG1. VNET1 is deleted automatically.' A red box highlights the word 'deleted'.

Answer:

Explanation:

Answer Area

You have an Azure virtual network named VNET1 in a resource group named RG1.

You assign the Azure Policy definition of Not Allowed Resource Type and specify that virtual networks are not an allowed resource type in RG1. VNET1

is deleted automatically.
is moved automatically to another resource group.
continues to function normally.
is now a read-only object.

Microsoft

NEW QUESTION # 91

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Availability zones can be implemented in all Azure regions.	<input type="radio"/>	<input type="radio"/>
Only virtual machines that run Windows Server can be created in availability zones.	<input type="radio"/>	<input type="radio"/>
Availability zones are used to replicate data and applications to multiple regions.	<input type="radio"/>	<input type="radio"/>

Microsoft
