NEW QUESTION # 312

You have an Azure subscription that contains the resources shown in the following table.

You need to manage outbound traffic from VNET1 by using Firewall1.

What should you do first?

- A. Create an Azure Network Watcher.
- B. Configure the Hybrid Connection Manager.
- C. Upgrade ASP1 to the Premium SKU.
- **D. Create a route table.**

Answer: D

Explanation:

When you create a virtual network, Azure automatically creates a default route table for each of its subnets and adds system default routes to the table. In this step, you create a user-defined route table that routes all traffic to the firewall, and then associate it with the App Service subnet in the integrated virtual network.

Section3 in document.

NEW QUESTION # 313

You have an Azure web app named App1.

You need to monitor the availability of App1 by using a multi-step web test.

What should you use in Azure Monitor?
