### **EXIN EPI Certified Information Technology Manager Sample Questions (Q12-Q17):**

#### **NEW QUESTION # 12**

Your organization considers a job rotation program. What is the main objective?

- A. Allow staff a diversity in their daily responsibilities
- **B. Support the long-term continuity of the organization**
- C. Train staff on a range of activities common in daily operations
- D. Increase staff job satisfaction

**Answer: B**

Explanation:

The main objective of a job rotation program in an IT organization is to support the long-term continuity of the organization (A). Job rotation ensures that multiple staff members are trained across various roles and tasks, reducing dependency on specific individuals and mitigating risks associated with staff turnover or absences. This approach enhances organizational resilience by creating a flexible, cross-trained workforce capable of maintaining operations, aligning with IT organization principles for workforce planning and business continuity.

\* Train staff on a range of activities (B): While training is a benefit, it is a means to achieve continuity, not the primary objective.

\* Increase staff job satisfaction (C): Job satisfaction may be a secondary benefit, but it's not the main goal in an IT context.

\* Allow staff a diversity in responsibilities (D): Diversity in tasks is a byproduct, not the primary focus, which is organizational continuity.

According to human resource management frameworks, job rotation is a strategic tool for ensuring operational stability, particularly in IT environments where specialized skills are critical.

Reference: EPI CITM study guide, under IT Organization, likely discusses workforce planning and job rotation for continuity. Check sections on human resource management or organizational resilience.

#### **NEW QUESTION # 13**

The project brief/project charter is created. Which of the following is not part of it?

- A. High-level risk
- B. Quality expectations
- **C. Detailed planning**
- D. Summary budget

**Answer: C**

Explanation:

The project charter (or project brief) is a high-level document created during the initiation phase of a project, as defined by PMBOK (Project Management Body of Knowledge). It outlines the project's purpose, objectives, scope, and key elements but

does not include detailed planning (A), which occurs during the planning phase after the charter is approved. The charter typically includes:

- \* High-level risks (B): Identifies major risks to provide early awareness.
- \* Summary budget (C): Provides an initial cost estimate for approval.
- \* Quality expectations (D): Defines high-level quality requirements or standards.

Detailed planning, such as creating a detailed Work Breakdown Structure (WBS) or schedule, is part of the project management plan developed later, not the charter.

Reference: EPI CITM study guide, under Project Management, likely references PMBOK's project initiation processes, detailing the components of a project charter. Refer to sections on project initiation or project charter development.

#### NEW QUESTION # 14

Whilst creating the budget for the project, stakeholders demand that the project manager submits a budget proposal as accurate as possible, supported by a Work/Product Breakdown Structure (WBS/PBS). What is the preferred budget estimation?

- A. Bottom-up estimate
- B. Rough Order of Magnitude (ROM)
- C. Analogous estimate
- D. Budget estimate

#### Answer: A

Explanation:

For a budget proposal that must be as accurate as possible and supported by a Work Breakdown Structure (WBS) or Product Breakdown Structure (PBS), the bottom-up estimate (A) is preferred. This method involves estimating costs for each task or deliverable in the WBS/PBS, then aggregating them to calculate the total budget. According to PMBOK, bottom-up estimation leverages detailed data, ensuring high accuracy, especially when a WBS is available.

\* Rough Order of Magnitude (ROM) (B): A high-level estimate with low accuracy ( $\pm 50\%$ ), used early in projects, not suitable for detailed budgeting.

\* Analogous estimate (C): Relies on historical data from similar projects, less accurate than bottom-up when detailed WBS data exists.

\* Budget estimate (D): A general term, not a specific technique, and less precise than bottom-up.

Reference: EPI CITM study guide, under Project Management, likely references PMBOK's cost estimation techniques, emphasizing bottom-up for accurate budgeting. Refer to sections on project cost management or budgeting.

#### NEW QUESTION # 15

To further reduce fraud cases in the transfer of land titles, the government introduces a new system which, in the back-end, makes use of blockchain technology. Key functionality of the system is speed of transmission and privacy. Which type of blockchain is most preferred for this type of application?

- A. Community blockchain
- B. Private blockchain
- C. Consortium blockchain
- D. Public blockchain

#### Answer: B

Explanation:

For a government system handling land title transfers, the key requirements are speed of transmission and privacy. A private blockchain is most suitable because it restricts access to authorized participants, ensuring privacy and confidentiality of sensitive data such as land ownership records. Private blockchains are controlled by a single organization or a limited group, allowing faster transaction processing compared to public blockchains, which require consensus from a large, decentralized network. This aligns with the need for quick and secure transactions in a controlled environment.

Public blockchains (B) are open to anyone, which compromises privacy for sensitive government data.

Community blockchain (A) is not a standard term in blockchain technology, and consortium blockchains (D), while involving multiple organizations, are less suitable for a single government entity needing full control.

Reference: EPI CITM study guide likely covers blockchain applications under IT Strategy, emphasizing private blockchains for secure, controlled environments like government systems. Refer to sections on emerging technologies or IT strategy frameworks for detailed blockchain categorizations.

## NEW QUESTION # 16

For one of the mission-critical applications in a financial institution, data must be made instantly available at two locations. Which replication mode do you recommend?

- A. Instant replication
- B. Asynchronous replication
- **C. Synchronous replication**
- D. Semi-synchronous replication

**Answer: C**

Explanation:

For a mission-critical application in a financial institution requiring data to be instantly available at two locations, synchronous replication (B) is recommended. Synchronous replication ensures that data is written to both the primary and secondary locations simultaneously, guaranteeing no data loss and immediate availability at both sites. This is critical for financial applications where data integrity and zero recovery point objective (RPO) are essential, as per business continuity and disaster recovery frameworks like ISO 22301.

\* Instant replication (A): Not a standard term in replication strategies; likely a distractor.

\* Asynchronous replication (C): Data is replicated with a delay, risking data loss in case of failure, unsuitable for instant availability.

\* Semi-synchronous replication (D): A compromise where the primary site continues after the secondary acknowledges receipt, but it may not guarantee instant availability.

Synchronous replication ensures real-time data consistency, critical for financial systems.

Reference: EPI CITM study guide, under Business Continuity Management, likely discusses data replication strategies for disaster recovery. Check sections on disaster recovery planning or data availability.
