NEW QUESTION # 23
How does an implementation consultant support customer experts during Fit-to-Standard workshops? Note:
There are 2 correct answers to this question

- A. Conduct end-user training on active scope items.
- B. Determine set up instructions for customer-driven integrations.
- C. Demonstrate SAP Best Practice business processes in the starter system.
- D. Highlight areas that require configuration or customization decisions.

Answer: C,D

Explanation:
During the Fit-to-Standard workshops, an implementation consultant supports customer experts by doing the following:
* Demonstrate SAP Best Practice business processes in the starter system. The consultant shows the customer experts how the standard processes work in SAP S/4HANA Cloud Public Edition and how they fit their business needs1.
* Highlight areas that require configuration or customization decisions. The consultant identifies and documents the gaps between the standard processes and the customer requirements, and proposes solutions that are aligned with the cloud mindset1.
The other options are not the correct ways to support customer experts during the Fit-to-Standard workshops. Determining set up instructions for customer-driven integrations is done in the integration phase, after the Fit-to-Standard workshops are completed2. Conducting end-user training on active scope items is done in the deploy phase, before the go-live of the system3. NEW QUESTION # 24
Which of the following actions does the lead configuration expert carry out during the content deployment phase in the SAP

S/4HANA Cloud starter system? Note: There are 3 correct answers to this question.

- A. Create two projects
- B. Confirm primary logistics settings
- C. Define the scope
- D. Confirm primary HCM settings
- E. Confirm primary finance settings

Answer: A,B,C

Explanation:
For implementing SAP S/4HANA Cloud Public Edition for a customer, the following systems are commonly used:
* Sandbox system: This system is used in the very early stages of the project for exploration and trying out different configurations without affecting the development or production environments. It's a safe space for experimentation.
* Development system: This system is where the initial setup and customizations are made. Configuration changes, custom development, and extensions are carried out here before being moved to the test system for further testing.
* Test system: After configurations and developments are done in the development system, they are transported to the test system. This environment is used for rigorous testing to ensure that everything works as expected and to identify any issues before moving to the production environment.
These systems play crucial roles in the implementation process, allowing for a structured and phased approach to setting up, customizing, testing, and finally deploying SAP S/4HANA Cloud Public Edition.
