

Amazon AWS-Developer Latest Test Online | Exam Dumps AWS-Developer Zip

P.S. Free 2026 Amazon AWS-Developer dumps are available on Google Drive shared by VerifiedDumps:
<https://drive.google.com/open?id=1BQscnNxgyYgcGQov73WCW8ARx5r0s-D>

But with proper planning, firm commitment, and complete AWS-Developer exam preparation will enable you to make this Amazon AWS-Developer easiest. Are you ready to accept this challenge? Looking for a simple, smart, and quick way of completing Amazon AWS-Developer Exam Preparation? If your answer is yes then you must try VerifiedDumps AWS-Developer Questions.

To let the clients have an understanding of their mastery degree of our AWS-Developer guide materials and get a well preparation for the test, we provide the test practice software to the clients. The test practice software of AWS-Developer practice guide is based on the real test questions and its interface is easy to use. The test practice software boosts the test scheme which stimulate the real test and boost multiple practice models, the historical records of the practice of AWS-Developer Training Materials and the self-evaluation function.

>> Amazon AWS-Developer Latest Test Online <<

100% Pass AWS-Developer - AWS Certified Developer Associate Exam (DVA-C02) Fantastic Latest Test Online

Please don't worry about the purchase process because it's really simple for you. The first step is to select the AWS-Developer test guide, choose your favorite version, the contents of different version of our AWS-Developer exam questions are the same, but different in their ways of using. We have three different versions for you to choose: PDF, Soft and APP versions. The second step: fill in with your email and make sure it is correct, because we send our AWS-Developer learn tool to you through the email. Later, if there is an update, our system will automatically send you the latest AWS-Developer version.

Amazon AWS-Developer Exam is a certification exam for individuals who want to become AWS Certified Developers - Associates. AWS-Developer exam is designed for candidates who have experience in developing and maintaining AWS-based applications, as well as a working knowledge of at least one high-level programming language. AWS Certified Developer Associate Exam (DVA-C02) certification validates the skills and knowledge needed to design, develop, and deploy cloud-based applications using AWS.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q126-Q131):

NEW QUESTION # 126

A bookstore has an ecommerce website that stores order information in an Amazon DynamoDB table named BookOrders. The DynamoDB table contains approximately one million records.

The table uses OrderID as a partition key. There are no other indexes.

A developer wants to build a new reporting feature to retrieve all records from the table for a specified customer, based on a CustomerID property.

- A. Create a DynamoDB local secondary index (LSI) on the table. Use CustomerID as the partition key. Use the specified

CustomerID value to run a query on the table.

- **B. Create a DynamoDB global secondary index (GSI) on the table. Use CustomerID as the partition key. Use the specified CustomerID value to run a query on the table.**
- C. Create a DynamoDB global secondary index (GSI) on the table. Use CustomerID as the sort key. Use a filter expression to perform a scan operation on the table to match on the specified CustomerID value.
- D. Create a DynamoDB local secondary index (LSI) on the table. Use CustomerID as the sort key. Run a PartiQL query on the table with a SELECT statement where CustomerID equals the specified CustomerID value.

Answer: B

Explanation:

Comprehensive and Detailed Step-by-Step Explanation:

The requirement is to query records by CustomerID, which is not the current partition key (OrderID). To achieve this efficiently:

* Option A: Create a GSI with CustomerID as the Partition Key:

* A Global Secondary Index (GSI) allows developers to create a different partition key and optional sort key for querying the data.

* By creating a GSI with CustomerID as the partition key, the developer can query the table efficiently using CustomerID as the primary lookup key.

* This avoids scanning the entire table and matches the requirement.

* Why Other Options Are Incorrect:

* Option B: Using CustomerID as a sort key for the GSI and performing a scan operation is inefficient. Queries are optimized, but scans are not.

* Option C and D: Local Secondary Indexes (LSI) are only valid when the partition key remains the same as the base table. Since OrderID is the base table's partition key, using CustomerID as the partition key or sort key in an LSI is not valid.

NEW QUESTION # 127

A serverless application uses an API Gateway and AWS Lambda. Where should the Lambda function store its session information across function calls?

- A. In an Amazon SQS queue
- B. In the local filesystem
- **C. In an Amazon DynamoDB table**
- D. In an SQLite session table using -DSQLITE_ENABLE_SESSION

Answer: C

NEW QUESTION # 128

A Developer is developing an application that manages financial transactions. To improve security, multi-factor authentication (MFA) will be required as part of the login protocol.

What services can the Developer use to meet these requirements?

- A. Amazon DynamoDB to store MFA session data, and Amazon SNS to send MFA codes
- B. AWS Directory Service
- **C. Amazon Cognito with MFA**
- D. AWS IAM with MFA enabled

Answer: C

Explanation:

Explanation

AWS documentation - Cognito MFA Managing Security

You can add multi-factor authentication (MFA) to a user pool to protect the identity of your users. MFA adds a second authentication method that doesn't rely solely on user name and password. You can choose to use SMS text messages, or time-based one-time (TOTP) passwords as second factors in signing in your users. You can also use adaptive authentication with its risk-based model to predict when you might need another authentication factor. It's part of the user pool advanced security features, which also include protections against compromised credentials.

NEW QUESTION # 129

Which of the following items are required to allow an application deployed on an EC2 instance to write data to a DynamoDB table? Assume that no security Keys are allowed to be stored on the EC2 instance. Choose 2 answers

- A. Add an IAM Role to a running EC2 instance.
- **B. Create an IAM Role that allows write access to the DynamoDB table.**
- **C. Launch an EC2 Instance with the IAM Role included in the launch configuration.**
- D. Add an IAM User to a running EC2 Instance.
- E. Launch an EC2 Instance with the IAM User included in the launch configuration.
- F. Create an IAM User that allows write access to the DynamoDB table.

Answer: B,C

NEW QUESTION # 130

An Amazon DynamoDB table uses a Global Secondary Index (GSI) to support read queries. The primary table is write-heavy, whereas the GSI is used for read operations. Looking at Amazon CloudWatch metrics, the Developer notices that write operations to the primary table are throttled frequently under heavy write activity. However, write capacity units to the primary table are available and not fully consumed.

Why is the table being throttled?

- **A. The GSI write capacity units are underprovisioned**
- B. A large write operation is being performed against another table
- C. There are not enough read capacity units on the primary table
- D. Amazon DynamoDB Streams is not enabled on the table

Answer: A

Explanation:

<https://stackoverflow.com/questions/39582752/do-global-secondary-index-gsi-in-dynamodb-impact-tables-provision-capacity>
