Free PDF Quiz 2026 Juniper Authoritative JN0-253: Latest Mist AI, Associate (JNCIA-MistAI) Exam Format

They make an effort to find reliable and current Juniper JN0-253 practice questions for the difficult Juniper JN0-253 exam. More challenging than just passing the Juniper JN0-253 Certification are the intense anxiety and heavy workload that the candidate must endure to be eligible for the Juniper JN0-253 certification.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q89-Q94):

NEW QUESTION # 89

In the context of Juniper Mist, which two statements describe a bad user minute? (Choose two.)

- A. A metric that tracks how many minutes a user is connected to a network.
- B. The number of minutes a device is down multiplied by the number of users affected.
- C. The number of affected users multiplied by the number of minutes they are affected.
- D. A way to normalize a user's negative network experience.

Answer: C,D

Explanation:

In Juniper Mist AI, the concept of a Bad User Minute (BUM) is a core metric used within Service Level Expectations (SLEs) and the AI-driven analytics engine to quantify negative user experience.

According to the Juniper Mist AI Operations and SLE Analytics Guide, a "bad user minute" is defined as:

"A normalized measure that represents one minute of degraded user experience for one user." Mist AI calculates this by multiplying the number of affected users by the number of minutes they experience poor performance. This allows administrators to understand the impact of network issues not just in duration, but in terms of total user experience degradation.

For example, if ten users experience poor connectivity for one minute, the system records 10 bad user minutes.

This normalization helps Juniper Mist prioritize incidents based on impact, rather than duration alone, allowing administrators to focus on issues that affect the greatest number of users.

Therefore:

* B is correct - it's a way to normalize a user's negative experience.

* D is correct - it's calculated as number of affected users × number of minutes affected.

NEW QUESTION # 90

By default, how long does an Installer role have access to a site for initial configuration before expiration?

- A. unlimited
- B. 7 days
- C. 24 hours
- D. 48 hours

Answer: B

NEW QUESTION # 91

At which two configuration levels are WLAN objects created? (Choose two.)

- A. site level
- B. user level
- C. device level
- D. org level

Answer: A,D

Explanation:

Site Level: WLAN objects can be created at the site level, allowing specific configurations for different locations within an organization. This helps in customizing WLAN settings based on the unique requirements of each site.

Org Level: WLAN objects can also be created at the organization level, which provides a standardized configuration that can be applied across multiple sites. This ensures consistency in WLAN settings throughout the entire organization.

NEW QUESTION # 92

You are asked to create a real time visualization dashboard which displays clients on a map. Which two Juniper Mist functions would you use in this scenario? (Choose two.)

- A. WebSocket
- B. webhooks
- C. Live View
- D. RESTful API

Answer: A,C

Explanation:

To create a real-time visualization dashboard that displays clients on a map, use Live View and WebSocket APIs. The "Live View" feature in Juniper Mist provides a graphical, interactive map view of clients (devices) and assets as they move through a site, with location data updated in real time. The Juniper Mist WebSocket API enables developers and integrators to subscribe to client location topics and stream position data directly to custom dashboards. According to the documentation: "WebSockets open a bidirectional communication session for sending and receiving real-time event-driven responses... Useful in circumstances where you want to avoid browser refreshes and display real-time location data." Combining these allows you to build a dashboard showing live client positioning, as seen in sample dashboards and integration guides for Mist.

NEW QUESTION # 93

What is the maximum number of Mist Edge devices supported for high availability?

- A. A maximum of 16 Mist Edge devices are supported.
- B. An unlimited number of Mist Edge devices are supported.
- C. A maximum of three Mist Edge devices are supported.
- D. A maximum of two Mist Edge devices are supported.

Answer: D

Explanation:

The maximum number of Mist Edge devices supported for high availability is two. This ensures that there is a backup device in place to take over in case the primary device fails, providing redundancy and maintaining network stability.

NEW QUESTION # 94

.....

There are three versions of our JN0-253 exam questions: the PDF, Software and APP online. Now I want to introduce the online version of our JN0-253 learning guide to you. The most advantage of the online version is that this version can support all electronica equipment. If you choose the online version of our JN0-253 Study Materials, you can use our products by your any electronica equipment. We believe it will be very convenient for you, such as IPAD, phone and laptop.
