The PrepAwayETE is a leading and reliable platform that has been offering real, valid, and updated Implementation Engineer - Data Protection Exam (NS0-528) exam practice test questions for many years. Over this long time period thousands of candidates have passed their dream Implementation Engineer - Data Protection Exam (NS0-528) certification exam. And the one thing has come in their success that was the usage of top-notch NS0-528 Exam Practice test questions. So you can also get help from PrepAwayETE practice test questions and make the Network Appliance NS0-528 exam preparation simple, smart and quick.

Network Appliance NS0-528 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> NetApp ONTAP Business Continuity Solutions: This section of the exam measures the skills of Disaster Recovery Specialists and covers advanced business continuity technologies. This includes the configuration and operation of SnapMirror active sync for continuous data replication and the execution of SVM-DR (Storage Virtual Machine Disaster Recovery) operations to ensure high availability.
Topic 2	<ul style="list-style-type: none"> NetApp Data Protection Software: This section of the exam measures the skills of DevOps Engineers and focuses on the deployment and administration of NetApp's proprietary data protection software. A key part of this domain involves applying these solutions to protect modern containerized applications running in Kubernetes environments.
Topic 3	<ul style="list-style-type: none"> Troubleshooting and Testing: This section of the exam measures the skills of Support Engineers and focuses on the practical skills needed to maintain data integrity. It involves troubleshooting common data protection configuration issues, executing well-defined Disaster Recovery (DR) procedures, and performing data restore operations to recover from data loss.
Topic 4	<ul style="list-style-type: none"> Data Protection Solutions: This section of the exam measures the skills of Storage Architects and covers the foundational principles of designing data protection solutions. It focuses on creating comprehensive design documentation, understanding the various components involved, and identifying all critical solution dependencies to ensure a robust and reliable data protection strategy.
Topic 5	<ul style="list-style-type: none"> NetApp ONTAP Core Data Protection Features: This section of the exam measures the skills of Systems Administrators and validates core knowledge of data protection and redundancy within the ONTAP environment. It encompasses understanding how data efficiencies impact protection strategies and the practical knowledge required to deploy these data protection solutions effectively in a hybrid cloud infrastructure.

Training NS0-528 Tools & NS0-528 Exam Cram Questions

PrepAwayETE has designed PrepAwayETE which has actual exam Dumps questions, especially for the students who are willing to pass the Network Appliance NS0-528 exam for the betterment of their future. The study material is available in three different formats. Network Appliance NS0-528 Practice Exam are also available so the students can test their preparation with unlimited tries and pass Implementation Engineer - Data Protection Exam (NS0-528) certification exam on the first try.

Network Appliance Implementation Engineer - Data Protection Exam Sample Questions (Q237-Q242):

NEW QUESTION # 237

You have a FAS9000 with 10 TBNL-SAS drives that is replicating to a FAS8200 with 4 TB NL-SAS drives. An 80 TB source volume on the FAS9000 is showing 50% storage efficiency. After that volume mirror is initialized, the FAS8200 destination volume is showing only 10% storage efficiency.

In this scenario, why is storage efficiency reduced after replication?

- A. The different sized drives use different efficiency methods.
- B. The source volume has inline deduplication enabled.
- C. The different controller models require logical replication.
- D. The destination volume has post process compression enabled.

Answer: A

NEW QUESTION # 238

You are at a customer site and assisting with testing a sudden site disaster scenario with their MetroCluster solution. All the equipment at the production site is suddenly powered off, and the command metrocluster switchover -forced-on-disaster true is issued. After the switchover to the disaster site is complete, the customer notices that one of their database applications is offline. All other data is accessible from the disaster site. You notice the following in the volume show output:

What can you do to help bring the application online while in switchover?

- A. Increase the available space using the volume size command.
- B. Modify the -in-nvfailed-state option using the volume modify command.
- C. Reboot the NetApp nodes with the -ignore-strict-sync-warnings true option.
- D. Advise the customer to reboot their application server.

Answer: B

Explanation:

The in-nvfailed-state: true indicates that the volume is in Nonvolatile RAM (NVRAM) failed state, which happens when write operations could not be committed properly during a disaster event. This causes the volume to go into a read-only protected mode to avoid data corruption.

To restore access, you must manually override this state with:

volume modify -vserver SVM1-mc -volume APP02_DB -in-nvfailed-state false This will bring the volume out of failed state and allow the database application to function again during the switchover.

NEW QUESTION # 239

Due to legal compliance requirements, a financial institution needs to store and commit files to a non-erasable, non-rewritable state either forever or for a designated retention period.

In this scenario, which ONTAP feature will satisfy these requirements?

- A. SnapLock
- B. Snapshot
- C. FlexClone
- D. SnapDiff

Answer: A

NEW QUESTION # 240

You are asked to perform a NetApp Snapshot copy single-file restore on a corrupted thin-provisioned LUN that is 10 GB in size and is currently at 80% full.

How much additional free space do you need in the volume to perform this operation?

- **A. 10 GB**
- B. 16 GB
- C. 20 GB
- D. 8 GB

Answer: A

NEW QUESTION # 241

What NetApp tool helps you with the configuration for the cluster switches, when you are expanding an existing 4-node MetroCluster IP setup?

- A. Active IQ Upgrade Advisor
- B. Active IQ Config Advisor
- **C. RCF generator**
- D. Interoperability Matrix Tool

Answer: C

Explanation:

The RCF (Reference Configuration File) generator is the NetApp tool used to create the appropriate switch configuration files for MetroCluster IP setups. When expanding a MetroCluster IP configuration (e.g., from 4 nodes to more), you use the RCF generator to ensure the cluster and interconnect switches are properly configured.

NEW QUESTION # 242

.....

In general PrepAwayETE NS0-528 exam simulator questions are practical, knowledge points are clear. According to candidates' replying, our exam questions contain most of real original test questions. You will not need to waste too much time on useless learning. NS0-528 Exam Simulator questions can help you understand key knowledge points and prepare easily and accordingly. Candidates should grasp this good opportunity to run into success clearly.
