## Fortinet FCP_FCT_AD-7.4 Valid Vce Dumps | FCP_FCT_AD-7.4 Exam Dumps Pdf

Our FCP_FCT_AD-7.4 practice questions attract users from all over the world because they really have their own charm. No product like our FCP_FCT_AD-7.4 study guide will seriously consider the needs of users in all aspects. From product content to system settings, we will give you what you want! Firstly, you definitely want to pass the exam for sure. Our FCP_FCT_AD-7.4 Exam Questions are high-effective with a high pass rate as 98% to 100%. So don't hesitate, just come and buy our FCP_FCT_AD-7.4 learning braindumps!

## Fortinet FCP - FortiClient EMS 7.4 Administrator Sample Questions (Q22-Q27):

**NEW QUESTION # 22**
Refer to the exhibit.

The zero trust network access (ZTNA) serial number on endpoint br-pc-1 is in a disabled state.
What is causing the problem? (Choose one answer)

- A. The ZTNA destinations endpoint profile is disabled.
- B. The ZTNA certificate has been revoked by administrator.
- C. The ZTNA is disabled due to FortiClient disconnected from FortiClient EMS.
- D. The ZTNA feature is not installed on FortiClient.

**Answer: A**

Explanation:
Based on theFortiClient EMS 7.2/7.4 Study Guidesand the visual evidence provided in the exhibit, here is the verified breakdown of why theZTNA Serial Numberis showing asDisabled:
1. Analysis of the Exhibit
* Operating System:The endpoint is runningLinux (Ubuntu 22.04.3 LTS).
* Connection Status:The endpoint status isOnlineandManaged by EMS. This immediately eliminates Option C, as the device is actively communicating with the EMS server.
* Features List:At the bottom right of the "Features" column, it explicitly states"ZTNA installed". This eliminatesOption A, confirming the software component is present on the endpoint.
* ZTNA Serial Number Field:The field is highlighted in red and shows"Disabled".
2. Identifying the Root Cause (Option B)
In the FortiClient EMS curriculum regardingZTNA (Zero Trust Network Access), the ZTNA Serial Number (also known as the ZTNA Tagging or Client Certificate UID) is generated and activated based on the assigned Endpoint Profile.
* Profile Dependency:For FortiClient to generate a ZTNA serial number/certificate and participate in ZTNA, the administrator must enable and configure theZTNA Destinations(or ZTNA Connection) profile within the EMS.
* Disabled State:If theZTNA Destinationsfeature is disabled in the profile assigned to that specific endpoint (or if the endpoint is assigned the "Default" profile where ZTNA is not configured), the
"ZTNA Serial Number" status on the EMS dashboard will reflect asDisabled.
* Linux Specifics:In FortiClient for Linux, ZTNA support is available but requires the profile to be explicitly pushed and active. If the profile is toggled off in the EMS GUI underEndpoint Profiles > ZTNA Destinations, the serial number functionality is suspended.
3. Why Other Options are Incorrect
* A. The ZTNA feature is not installed:The exhibit clearly shows "ZTNA installed" under the Features list.
* C. FortiClient disconnected from EMS:The exhibit shows the status as "Online" and "Managed by EMS" with a green checkmark.
* D. The ZTNA certificate has been revoked:If a certificate is revoked, the status typically shows as
"Revoked" or "Expired," or the serial number would still be present but marked as untrusted. A
"Disabled" state indicates the feature itself is turned off at the policy/profile level.

**NEW QUESTION # 23**
An administrator must add an authentication server on FortiClient EMS in a different security zone that cannot allow a direct connection.
Which solution can provide secure access between FortiClient EMS and the Active Directory server?

- A. Configure and deploy a FortiGate device between FortiClient EMS and the Active Directory server.
- B. Configure a slave FortiClient EMS on a virtual machine.
- C. Configure Active Directory and install FortiClient EMS on the same VM.

- D. Configure an Active Directory connector between FortiClient EMS and the Active Directory server.

**Answer: A**

Explanation:
* Requirement:
* The administrator needs to add an authentication server on FortiClient EMS in a different security zone that cannot allow a direct connection.
* Solution Analysis:
* The goal is to securely connect FortiClient EMS and the Active Directory server despite being in different security zones.
* Evaluating Options:
* Installing FortiClient EMS on the same VM as Active Directory (option B) is not practical due to security zone separation.
* Configuring a slave FortiClient EMS on a virtual machine (option C) does not address the need for secure communication.
* Configuring an Active Directory connector (option D) may not be sufficient without secure routing.
* Conclusion:
* Deploying a FortiGate device between FortiClient EMS and the Active Directory server ensures secure and controlled access between the two zones.
References:
FortiClient EMS and FortiGate configuration and deployment documentation from the study guides.

## NEW QUESTION # 24
Exhibit.

Based on the FortiClient logs shown in the exhibit, which endpoint profile policy is currently applied lo the ForliClient endpoint from the EMS server?

- A. Fortinet-Training
- B. Default
- C. Default configuration policy c
- D. Compliance rules default

**Answer: A**

Explanation:
* Observation of Logs:
* The logs show a policy named "Fortinet-Training" being applied to the endpoint.
* Evaluating Policies:
* The log entries indicate that the "Fortinet-Training" policy was received and applied.
* Conclusion:
* Based on the logs, the currently applied policy on the FortiClient endpoint is "Fortinet-Training".
References:
FortiClient EMS policy configuration and log analysis documentation from the study guides.

## NEW QUESTION # 25
Refer to the exhibit, which shows the endpoint summary information on FortiClient EMS.

What two conclusions can you make based on the Remote-Client status shown above? (Choose two.)

- A. The endpoint is configured to support FortiSandbox.
- B. The endpoint is classified as at risk.
- C. The endpoint is currently off-net.
- D. The endpoint has been assigned the Default endpoint policy.

**Answer: C,D**

Explanation:
Based on the Remote-Client status shown in the exhibit:
* Endpoint Policy:The "Policy" field shows "Default," indicating that the endpoint has been assigned the Default endpoint policy.
* Connection Status:The "Location" field shows "Off-Fabric," meaning that the endpoint is currently off the corporate network (off-net).
Therefore, the two conclusions that can be made are:
* The endpoint has been assigned the Default endpoint policy.
* The endpoint is currently off-net.

* FortiClient EMS 7.2 Study Guide, Endpoint Summary Information Section
* Fortinet Documentation on Endpoint Policies and Status Indicators

**NEW QUESTION # 26**
Which two VPNtypes can a FortiClientendpoint user inmate from the Windows command prompt? (Choose two)

- A. SSL VPN
- B. L2TP
- C. IPSec
- D. PPTP

**Answer: A,C**

Explanation:
FortiClient supports initiating the following VPN types from the Windows command prompt:
* IPSec VPN:FortiClient can establish IPSec VPN connections using command line instructions.
* SSL VPN:FortiClient also supports initiating SSL VPN connections from the Windows command prompt.
These two VPN types can be configured and initiated using specific command line parameters provided by FortiClient.
