CompTIA 220-1101 Reliable Test Online - Clear 220-1101 Exam

Once you ensure your grasp on the 220-1101 Questions and answers, evaluate your learning solving the 220-1101 practice tests provided by our testing engine. This innovative facility provides you a number of practice questions and answers and highlights the weak points in your learning. You can improve the weak areas before taking the actual test and thus brighten your chances of passing the exam with an excellent score. Moreover, doing these practice tests will impart you knowledge of the actual exam format and develop your command over it.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q515-Q520):

NEW QUESTION # 515

A technician is configuring a desktop RAID to allow for the best I/O performance and the most storage capacity possible. Which of the following RAID types should the technician use?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

RAID 0 is a disk array configuration that splits data across two or more disks without parity or mirroring. RAID 0 provides the best I/O performance because it allows parallel read and write operations on multiple disks. RAID 0 also provides the most storage capacity possible because it does not use any disk space for redundancy. However, RAID 0 does not provide any fault tolerance and increases the risk of data loss if any disk fails.

NEW QUESTION # 516

A user reports that a computer has a virus on it. Which of the following is the FIRST step the technician should take?

- A. Make a backup of the user's data on an external drive.
- B. Ask the user about the symptoms the computer is experiencing.
- C. Determine a plan of action to resolve the problem.
- D. Run antivirus software to remove the virus from the computer.

Answer: B

Explanation:

Asking the user about the symptoms the computer is experiencing is the first step the technician should take when a user reports that a computer has a virus on it. This step helps the technician to gather information and identify the problem before determining a plan of action to resolve it.

Running antivirus software, making a backup of the user's data, or determining a plan of action are not the first steps, but possible actions that can be taken after identifying the problem.

NEW QUESTION # 517

A technician is configuring a workstation to be used as a VM host. After installing the necessary software, the technician is unable to create any VMs. Which of the following actions should be performed?

- A. Disable the BIOS password.
- B. Enable multithreading.
- C. Enable TPM.
- D. Enable Fast Startup.

Answer: B

Explanation:

In order to have a VM running on a system, the system needs to have hyperthreading and/or multicore processing. Multithreading is a feature that allows CPUs the ability to run multiple instruction processes simultaneously by creating virtual cores that will typically run instruction threads in parallel. If VMs are unable to load, you will have to enable multithreading. This might look like enabling "HT" in the BIOS. In VM lingo, this is also known as hyperthreading. I've discussed this question with several IT professionals and CompTIA instructors, and we all agree on this answer.

NEW QUESTION # 518

A technician is installing a USB Wi-Fi card. Which of the following would be the MOST appropriate way for the technician to receive the latest official drivers for the device?

- A. Allow the OS to install the drivers automatically.
- B. Run the autoinstall CD.
- C. Download the drivers from the vendor's website.
- D. Utilize a third-party, non-OEM driver.

Answer: C

Explanation:

Explanation

The most appropriate way for the technician to receive the latest official drivers for a USB Wi-Fi card is to download them from the vendor's website. This ensures that the drivers are compatible, updated, and secure.

Allowing the OS to install the drivers automatically may not provide the latest or best drivers for the device.

Utilizing a third-party, non-OEM driver could cause compatibility or security issues. Running the autoinstall CD could install outdated or unnecessary software along with the drivers

NEW QUESTION # 519

Which of the following network services is used to assign an IP address to a network host?

- A. LDAP
- B. SMTP
- C. DNS
- D. DHCP

Answer: D

Explanation:

DHCP (Dynamic Host Configuration Protocol) is the service used to automatically assign IP addresses to network hosts. It dynamically manages the distribution of IP addresses and configuration details (like subnet mask, gateway, and DNS servers), ensuring no two devices are assigned the same address on the network.

Option B (DNS): Incorrect. DNS translates domain names into IP addresses but does not assign them.

Option C (LDAP): Incorrect. LDAP is a protocol used for accessing and maintaining directory services, such as user information and permissions.

Option D (SMTP): Incorrect. SMTP is used for sending and receiving email, not for IP address assignment.

Reference:

CompTIA A+ Core 1 Objectives: 2.5 (Network configuration)

NEW QUESTION # 520

.....

If you do not know how to pass the exam more effectively, I'll give you a suggestion is to choose a good training site. This can play a multiplier effect. Exams4sures site has always been committed to provide candidates with a real CompTIA 220-1101 Certification Exam training materials. The Exams4sures CompTIA 220-1101 Certification Exam software are authorized products by vendors, it is wide coverage, and can save you a lot of time and effort.
