

覆蓋全面的2V0-15.25認證資料|第一次嘗試輕鬆學習並通過考試和最佳的2V0-15.25更新

儘管當時在市場上有許多 VMware 方面的書籍，但沒有一本是百分之百介紹實際操作的。許多關於 VMware 配置方面的書也只包括配置的某些部分，並不提供足夠的信息使讀者能完整地建立和測試配置。而 NewDumps 的 2V0-15.25 考題助您一次輕鬆通過 VMware 考試。我們提供的 2V0-15.25 考古題含蓋了當前最新的真實考題，並且全部附有正確答案。如果您正在準備考試，它將是最佳的學習助手，是您通過考試取得 2V0-15.25 認證的捷徑。

VMware 2V0-15.25 考試大綱：

主題	簡介
主題 1	Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.
主題 2	Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.
主題 3	Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.
主題 4	IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.
主題 5	VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.

2V0-15.25認證考試題庫 - 最新最有效的2V0-15.25考試學習資料

NewDumps提供最新和準確的VMware 2V0-15.25題庫資源，是考生通過考試和獲得證書最佳的方式。2V0-15.25認證是加快您作為IT行業專業人士的職業發展的最佳選擇。我們為幫助考生通過他們第一次嘗試的2V0-15.25考試而感到自豪，在過去兩年里，2V0-15.25題庫的成功率絕對是令人驚嘆的，這是一個100%保證通過的學習資料。感謝我們的客戶，他們現在能夠在自己的職業生涯輝煌的發展，這些都歸功于NewDumps的考古題，值得信賴。

最新的 Professional Level Exams 2V0-15.25 免費考試真題 (Q29-Q34):

問題 #29

An administrator is automating the deployment of a new VMware Cloud Foundation (VCF) fleet using VCF Installer. The VCF fleet must include VCF Automation being deployed in a simple deployment model.

The administrator creates a JSON file, but during the installation attempt the VCF Installer returns an error indicating that the JSON validation has failed.

What is the cause of the errors?

- A. A separate distributed switch was defined for vSAN traffic.
- B. NSX Manager size was defined as large.
- **C. Second IP address for VCF Automation is not specified.**
- D. VCF components binaries are not downloaded.

答案: C

解題說明:

In VCF 9.0, when deploying VCF Automation using the VCF Installer in a Simple Deployment Model, the appliance requires two IP addresses:

* Primary IP- Management interface

* Secondary IP- Required for service separation and internal routing for Automation services VMware's JSON schema for VCF Installer enforces this requirement. If the second IP is missing, incorrectly formatted, or placed under the wrong JSON section, the installer validation will fail immediately with a JSON schema error before deployment begins.

This is one of the most common causes of validation failure for VCF Automation deployment.

Option A (component binaries missing) produces a bundle download error, not JSON schema failure.

Option C (NSX Manager size = large) is allowed and does not break JSON validation.

Option D (separate vDS for vSAN) is allowed if defined correctly and also does not cause JSON schema failure.

問題 #30

An administrator attempts to add a new user (provideradmin05) within the VMware Cloud Foundation (VCF) Automation Provider Management Portal, however provideradmin05 cannot be found for import.

The following information is provided:

* The existing VCF Fleet uses VMware Identity Broker (VIDB) for single sign-on.

* VIDB uses Active Directory as the identity provider.

* A group named VCFA_ProviderAdmins was created in Active Directory, populated with the appropriate user accounts and synchronized with VIDB.

* Five days later provideradmin05 was added to VCFA_ProviderAdmins.

What will resolve this issue?

- A. In VCF Operations, disable VCF SSO for VCF Automation.
- **B. In VCF Operations, manually resync the directory.**
- C. In the VCF Automation Provider Management Portal, enable the Advanced Rights Bundle Mode.
- D. In the VCF Automation Provider Management Portal, import provideradmin05 as an LDAP user.

答案: B

解題說明:

VMware Cloud Foundation (VCF) 9.x uses VMware Identity Broker (VIDB) as the central identity provider for the entire VCF fleet. VIDB synchronizes user and group metadata from the connected enterprise identity source, in this case Active Directory. When a user is added to an AD group after the group was already synced into VIDB, VIDB does not automatically resync group membership on demand unless a directory synchronization is performed.

In this scenario, the group VCFA_ProviderAdmins was synchronized five days earlier. When the new user provideradmin05 was later added to the AD group, VIDB-and therefore the VCF Automation Provider Management Portal-does not recognize that new user until a manual directory resynchronization occurs from VCF Operations.

This operation forces VIDB to:

* Requery Active Directory

* Update group membership information

* Repopulate available users for import into VCF Automation

Options B and D are incorrect because they do not influence Identity Broker directory synchronization. Option C (disable VCF SSO) would break authentication and is not a valid solution.

問題 #31

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The following information has been provided about the VCF fleet configuration:

- * The VCF fleet consists of a single VCF instance with a single management domain and a single workload domain.
- * VCF Automation has a single Organization for VM Apps configured with a VCF Cloud Account for the workload domain.

The administrator has been tasked with creating a new Organization for All Apps to support the developers need to deploy Kubernetes-based applications in a new region in a workload domain.

The administrator attempts to create a new region through the VCF Automation Provider Portal but the VMware NSX manager for the workload domain does not appear on the list of available NSX managers.

What action must the administrator complete to resolve the issue?

- A. Deploy a new VCF workload domain.
- **B. Add the SDDC Manager integration for the VCF instance.**
- C. Deploy an additional VCF workload domain cluster.
- D. Trigger an inventory synch in VCF Operations fleet management.

答案: B

解題說明:

In VMware Cloud Foundation 9.0 Automation, the Provider Portal must have full visibility into the underlying VCF inventory-including NSX Managers, clusters, regions, vCenters, and SDDC Manager objects-before new regions can be created for Kubernetes-based deployments (All Apps Orgs).

The issue described:

"The NSX Manager for the workload domain does not appear in the list of available NSX Managers" occurs when SDDC Manager is not integrated into VCF Automation. Without this integration, VCF Automation cannot discover workload domains or their associated NSX Managers. As a result, when attempting to create a new region, the NSX Manager list is empty.

The required action is:

Add the SDDC Manager integration under VCF Automation # Provider Portal # Integrations.

This integration enables Automation to pull:

- * NSX Manager inventory
- * vCenter endpoints
- * Workload domain topology
- * Cluster details

Only after this integration is complete will the NSX Manager appear and allow region creation.

Option A and D (deploying new WLD or cluster) are unnecessary-inventory access is the problem, not resources.

Option B (triggering inventory sync) cannot work because no SDDC Manager integration exists.

問題 #32

An administrator is planning to apply updates to a VMware vCenter instance.

What two actions can the administrator take to confirm the status of the vCenter services? (Choose two.)

- A. Connect to the ESX DCUI where the vCenter Appliance is running and run the services.sh script.
- **B. Connect to the vCenter Server Management console and review the services statuses.**
- C. Connect to the vCenter appliance shell and run the vim-top command.
- **D. Connect to the vCenter appliance shell and run the services-control -status command.**
- E. Connect to the vSphere Client and review vCenter performance charts.

答案: B,D

解題說明:

Before applying updates to a vCenter Server Appliance (VCSA), an administrator must validate that all vCenter services are healthy. VMware provides two supported and documented methods for checking vCenter service status:

1. Using the vCenter Appliance Shell

Running the command:

services-control --status

This command displays the status of all vCenter-related services (vmldird, vmcad, vpxd, vsan-health, etc.). It is the authoritative diagnostic tool embedded in the appliance for confirming whether services are running, stopped, or in a degraded state. This method is explicitly documented in vSphere 9.0 service management procedures.

This matches Option B.

2. Using the vCenter Server Management Interface (VAMI)

Accessed at:

<https://<vcenter-fqdn>:5480>

The VAMI console provides a graphical interface under Services, showing the real-time health, status, and start/stop controls for all vCenter services. VMware documentation instructs administrators to review service status here before performing upgrades or maintenance operations.

This matches Option C.

Incorrect Options Explained

- * A. vSphere performance charts# These show workload data, not service health.
- * D. vim-top command# Displays vSphere hosts' runtime metrics, not vCenter services.
- * E. Running services.sh on ESXi DCUI# vCenter does not run ESXi services; this script is for ESXi hosts only.

問題 #33

An administrator has received reports of high CPU ready times on several Virtual Machines (VMs) running within a VMware Cloud Foundation (VCF) with error "F.ian and has been tasked with collecting detailed metrics for all running Virtual Machines from each ESX host. com.vmware.esx.settings_daemon.software.

scan_spec."

What is the cause of this error?

- A. A vendor add-on was not provided in the image.
- **B. A component was removed from the image.**
- C. A device driver is incompatible with the included firmware.
- D. The cluster was not assigned a default image.

答案: B

解題說明:

The error message com.vmware.esx.settings.daemon.software.scan_spec (reconstructed from the typo settings_daemon.software.scan_spec) is a specific failure generated by the vSphere Lifecycle Manager (vLCM) compliance engine on the ESXi host.

* Cause - Removed Component: This error is a documented known issue in vSphere 8.x/VCF 5.x+, specifically occurring when an administrator has removed a component from the Cluster Image that the system validates as "required" or "structural" for the host's hardware configuration (common with hosts using DPUs or specific OEM add-ons).

* The Scenario: The mention of "High CPU ready times" likely implies the administrator attempted to streamline the host image by removing a perceived "bloatware" component (like a vendor monitoring agent or unused driver) to improve performance.

* The Result: When vLCM attempts to build the "Scan Specification" (scan_spec) to validate the host against this modified image, the internal struct validation fails because the removed component creates an invalid dependency state, throwing the Invalid field software_spec... or scan_spec exception.

問題 #34

.....

NewDumpsの2V0-15.25考古題可以让你輕鬆地準備考試。另外，如果你是第一次參加考試，那麼你可以使用軟體版的考古題。因為這是一個完全模擬真實考試的氛圍和形式的軟體。你可以提前感受到真實的考試。這樣你在真實的考試中就不會感到緊張。用過了軟體版的考古題，你就可以在參加考試時以一種放鬆的心態來做題，有利於你正常發揮你的水準。
