To pass the exam, candidates must score a minimum of 68%.

## Salesforce Certified B2C Commerce Architect Sample Questions (Q11-Q16):

### NEW QUESTION # 11

An Order Management System (OMS) handles orders from multiple brandspecific sites, as part of the processing, the OMS sends the processing detail to be added at notes to the orders in B2C Commerce. These processing details are captured temporarily in custom objects, and are later processed by a batch Job that:

- \* Processes the custom object to extract the orderid and note data.
- \* Tries to load the order.
- \* If the order is not found, it deletes the custom object and moves on.
- \* If the order is found, it updates notes In the Order, upon successful update of this order, it deletes the custom object.

There is an Issue reported that the job is constantly failing and custom objects are growing in number. On investigating the production look the message below is being logged on each failure:

```
Processing of custom object 1xoskncjdw697769 failed for order 500000001 and has an associated replacement order 100000001. Exception details:
com.demandware.core.quota.QuotaLimitExceededException: Limit for quota 'object.OrderPO.relation.notes' exceeded. Limit is 1000, actual is 1001. at
com.demandware.core.quota.QuotaExceededException.throwLimitExceed(QuotaExceededException.java:21) at
com.demandware.core.quota.QuotaImpl.handleHardLimitViolation(QuotaImpl.java:333) at
```

What are three solution The Architect can take to fix this issue without losing meaningful data?

Choose 3 answers

- A. Using BM site import/export, softenthe<quota id="object.orderPo.relation.notes"> <custom- action>warn<custom- action> </quot>to make sure that neither order notes are lost and custom object is processed.
- B. Engage B2C Commerce Support Team to soften the quota limit for "object.OrderPO.relation.notes"
- C. Take the backup of the Order as XML and delete the Order to ensure on the next job run, the custom objects are getting processed.
- D. Take the backup of the Order as XML and delete the notes from Order to ensure on the next jobrun the custom objects are getting processed.
- E. Take the backup of the custom object and delete the custom object to ensure on the next job run the custom objects are getting processed.

**Answer: B,D,E**

Explanation:

When facing an issue with a growing number of custom objects due to the exceeded quota limit for order notes, effective solutions include:

\* Option C (Take the backup of the custom object and delete the custom object): This ensures that the data is preserved while freeing up space for new processes and reducing the load, allowing the job to continue running without the impediment of quota limits.

\* Option D (Engage B2C Commerce Support Team to soften the quota limit for 'object.OrderPO.relation.notes'): Increasing the quota limit can resolve the root cause of the issue by accommodating the actual business needs without compromising the integrity of order processing and note addition.

\* Option E (Take the backup of the Order as XML and delete the notes from Order): This allows the job to process the custom objects as intended in subsequent runs by clearing out space while ensuring the order data remains intact for business needs. These steps address the quota limit issue effectively without losing valuable order or note data, ensuring continuity and integrity of business operations.

### NEW QUESTION # 12

During discovery, the customer required a feature that is not included in the standard Storefront Reference Architecture (SFRA). In order to save budget, the Architect needs to find the quickest way to implement this feature.

What is the primary resource the Architect should use to search for an existing community implementation of the requested feature?

- A. Salesforce B2C Commerce Documentation
- **B. Salesforce Commerce Cloud GitHub repository**
- C. Salesforce Trailblazer Portal
- D. Salesforce Commerce Cloud Trailblazer community

**Answer: B**

Explanation:

When seeking a community implementation of a feature not included in the standard Storefront Reference Architecture (SFRA), the primary resource should be the Salesforce Commerce Cloud GitHub repository (Answer A). This repository often contains projects and code samples contributed by other developers in the community, which might include custom implementations that could be adapted to meet the customer's requirements. This approach not only leverages existing solutions that have been shared publicly but also can significantly save time and resources in development.

### NEW QUESTION # 13

Northern Trail Outfitters (NTO) wants to use Salesforce as a front end for creating accounts using the lead-to-opportunity process. When an opportunity is closed or won, an order must be created in the ERP, which manages orders. The organization has an Enterprise Service Bus (ESB) that supports the CometD protocol.

Which two integration approaches or steps should a Solution Architect recommend for this scenario?

Choose 2 answers

- **A. Enable ESB to publish to the platform event using the CometD protocol and notify the back-end ERP system to create the order synchronously.**
- B. Define a new platform event in Salesforce and then create a Process Builder process to publish a platform event when the opportunity status changes to Closed-Won.
- **C. Enable ESB to subscribe to the platform event using the CometD protocol and notify the back-end ERP system to create the order asynchronously.**
- D. Define a new platform event in the back-end system for the order details and then create a Process Builder process to initiate the platform event when the opportunity status changes to Closed-Won.

**Answer: A,C**

### NEW QUESTION # 14

The Client has implemented a different category/search layout for mobile and desktop. The code uses a session attribute called deviceType to choose the corresponding layout. This attribute is populated from the browser user agent. After this implementation they have run into these problems:

\* Sometimes desktop pages are being served to both desktop and mobile customers.

\* Sometimes mobile pages are being served to both desktop and mobile customers.

The page has caching implemented that depends on promotions. SEC is very important and the site traffic is high.

Which solution should the Architect select to resolve the issue without impacting the existing requirements?

- **A. Change the URL structure to include desktop and mobile as URL parameters to ensure different cached versions of the page**
- B. Disable caching for these pages to ensure that the correct template is used to render the mobile and desktop pages.
- C. Create customer groups for desktop and mobile users and use remote includes based on these groups to render the mobile and desktop pages
- D. Create customer groups for desktop and mobile users and empty promotions linked to these groups to ensure different cached versions of the page.

**Answer: A**

Explanation:

To resolve the issue of incorrect page versions being served across different devices, changing the URL structure to include device-specific parameters can be highly effective. By adding parameters such as 'desktop' or 'mobile' to the URLs:

The caching mechanism can differentiate between the content for different device types, thus caching and serving the correct version of the page according to the device type specified in the URL.

This method allows for maintaining existing caching strategies linked to promotions and ensures that SEO is not adversely affected since the content remains the same per device type but is merely served through different URLs.

This approach addresses the core issue without requiring disabling of caching or reengineering existing promotional structures, hence preserving site performance and user experience.

### NEW QUESTION # 15

A new project for a Client will involve a few different Integrations to their middleware system resulting in four different web services. All will use the same credentials to the middleware. Each will have the same timeout, but will require a separate log file prefix. How should the Architect set this up with the Service framework using a minimal set of configuration?

- A. Four Service Configurations, Four Service Profiles, One Service Credential
- B. One Service Configuration, Four Service Profiles, One Service Credential.
- **C. Four Service Configurations, One Service Profile, One Service Credential.**
- D. Four Service Configurations, Four Service Profiles, Four Service Credentials

**Answer: C**
