最新的 Salesforce Consultant Analytics-Con-201 免費考試真題 (Q103-Q108):

問題 #103

A CRM Analytics consultant is asked to help a company report on its sales activity. The company wants to train some users to create dashboards. The company also wants one other specific team to be able to use the dashboards. What should the consultant do to address these requirements?

- A. configure a permission set license assignment with two different levels of access.
- B. Use a permission set license with two different levels of access.
- C. Clone the existing permission set with different system permissions.

答案：A

解題說明：

To meet the requirement of training some users to create dashboards while giving another team access to use (but not modify) those dashboards, the best approach is to configure a permission set license assignment with two different levels of access. You can assign

specific permissions for dashboard creation to one group of users and viewing permissions to the other. This ensures the appropriate level of access based on the role without the need for duplicating permission sets or licenses unnecessarily.

問題 #104

Universal Containers has a single dataset that contains the attainment and commission fields for all sales reps.

Each sales rep should be able view the attainment data for each rep in their division. Each rep should only be able to see their own commission data.

Which option should a CRM Analytics consultant use to enforce this requirement?

- A. Create separate datasets for attainment and commission, and apply security Predicates and/or sharing inheritance.
- B. Utilize a single dataset and apply security predicates and/or sharing inheritance.
- C. Add the sales organization to the attainment dataset access list to be able to view commission data.

答案: A

問題 #105

The CRM Analytics consultant at Cloud Kicks is asked to a dashboard displaying Opportunities data on the account's record page.

The dashboard should display only opportunity data related to the current account viewed.

How should the consultant accomplish this?

- A. Create the dashboard, insert in the account's record page, and apply a filter based on the opportunity's Id field.
- B. Create a dashboard, clone it and filter it for each account record, and embed them into the account's record pages accordingly.
- C. Create the dashboard, insert in the account's record page, and apply a filter based on the account's Id field.

答案: C

問題 #106

A CRM Analytics consultant is working on Sales dashboards with multiple datasets and advanced queries in the Sales Analytics app.

Sales managers in the organization have been given Editor/Manager access to the app, whereas sales reps have been given Viewer access.

Some dashboards that are in progress are not ready to be rolled out to sales reps and should only be viewable by sales managers.

How should the consultant accomplish this?

- A. Duplicate the dashboards and their respective datasets, and move the assets to a separate app for the sales rep.
- B. Leverage the CRM Analytics asset visibility feature to hide the assets from the users.
- C. Remove the dashboard from the 'Run App' navigation list so the sales reps cannot navigate to these dashboards.

答案: B

解題說明:

In CRM Analytics, you can control the visibility of dashboards and other assets using the asset visibility feature. This allows the consultant to restrict access to specific assets (like dashboards) for certain groups of users, such as sales reps, without needing to duplicate datasets or move dashboards to another app.

This is the most efficient way to manage access for dashboards in progress while allowing only sales managers to view the in-progress dashboards.

問題 #107

Universal Containers intends to use a custom Salesforce big object in its org and visualize the data using CRM Analytics. As the number of rows to be synced is quite large, the CRM Analytics consultant is looking to set up an incremental sync with additional filters added as part of the data sync to improve performance.

What should the consultant keep in mind while implementing this?

- A. Custom big objects are NOT supported by CRM Analytics.
- B. Only SOSL queries can be used as data sync filters.

- C. Incremental data syne Is NOT supported for big objects.

答案：C
