## Authorized C\_TS462\_2023 Test Dumps & Testking C\_TS462\_2023 Exam Questions

If you want to get a better job and relieve your employment pressure, it is essential for you to get the C\_TS462\_2023 certification. However, due to the severe employment situation, more and more people have been crazy for passing the C\_TS462\_2023 exam by taking examinations, the exam has also been more and more difficult to pass. Our C\_TS462\_2023 test guide has become more and more popular in the world. Of course, if you decide to buy our C\_TS462\_2023 latest question, we can make sure that it will be very easy for you to pass C\_TS462\_2023 exam torrent that you can learn and practice it. Then you just need 20-30 hours to practice our study materials that you can attend your exam. It is really spend your little time and energy.

### SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Sales Sample Questions (Q53-Q58):

#### NEW QUESTION # 53

In your pricing procedure you have several condition types for a price such as PROO, PR02, PN00 and HM00. Only one of these prices is taken into account Which setting causes this behavior?

- A. Condition function
- **B. Exclusion indicator**
- C. Condition class
- D. Header condition

**Answer: B**

Explanation:

In SAP S/4HANA, apricing proceduredetermines how pricing conditions (e.g., PROO, PR02, PN00, HM00) are applied to calculate the final price in a sales document, such as a sales order. The question states that only one of several condition types for a price is taken into account, meaning that only one price condition is selected or applied, while the others are ignored. This behavior is controlled by theExclusion indicatorin the pricing procedure configuration.

Let's break down the question and analyze each option to understand why theExclusion indicatoris the correct choice:

Understanding Pricing in SAP S/4HANA

\* Apricing procedureis a sequence of steps that determines how prices, discounts, surcharges, and taxes are calculated in a sales document.

\* Condition types(e.g., PROO, PR02, PN00, HM00) represent individual pricing elements, such as base prices, promotional prices, or net prices. Each condition type has specific settings that control its behavior.

\* When multiple condition types for prices exist in a pricing procedure (e.g., multiple price conditions), SAP allows configuration to ensure only one price is applied to avoid conflicts or double pricing.

\* The question implies that the system selects only one price condition from PROO, PR02, PN00, or HM00, which suggests a mechanism is in place to exclude the others.

Analysis of Options

\* A. Condition function:

\* TheCondition functionis not a standard term in SAP S/4HANA pricing configuration. It may refer to the role of a condition type (e.g., price, discount, surcharge), but it is not a specific setting that controls whether only one condition is applied. Instead, the condition function is determined by settings like thecondition classandcalculation type, which define the purpose and calculation logic of a condition type.

\* Why incorrect: There is no "Condition function" setting that directly causes only one price condition to be selected among multiple price conditions.

\* B. Exclusion indicator:

- \* The Exclusion indicator is a setting in the pricing procedure configuration that controls condition type exclusivity. It is used to define condition exclusion groups, which determine which condition types are mutually exclusive. If multiple price condition types (e.g., PROO, PR02, PN00, HM00) are assigned to an exclusion group, the system applies a rule (e.g., selecting the condition with the best price, most specific condition, or first valid condition) to ensure only one condition is active.
- \* In SAP, condition exclusion is configured via condition exclusion groups (transaction V/08 or SPRO > Sales and Distribution > Basic Functions > Pricing > Condition Exclusion). For example:
  - \* You create an exclusion group and assign condition types PROO, PR02, PN00, and HM00 to it.
  - \* You define an exclusion rule, such as "select the condition with the lowest price" or "select the first valid condition."
  - \* During pricing, the system evaluates the conditions in the exclusion group and applies only one based on the rule, deactivating the others.
  - \* This mechanism perfectly explains the behavior described in the question, where only one price condition is taken into account.
  - \* Why correct: The Exclusion indicator (via condition exclusion groups) ensures that only one of the price condition types is applied, based on the defined exclusion rule.
- \* C. Condition class:
  - \* The Condition class is a setting in the condition type configuration (transaction V/06) that categorizes the condition type's purpose, such as:
    - \* B: Prices (e.g., PROO, PR02 for base prices).
    - \* A: Discounts or surcharges.
    - \* C: Taxes, etc.
  - \* While the condition class determines whether a condition is treated as a price, discount, or tax, it does not control whether multiple price conditions are mutually exclusive. For example, multiple condition types can have the condition class "B" (Prices) and still coexist unless an exclusion rule is applied.
  - \* Why incorrect: The Condition class defines the type of condition but does not enforce the selection of only one price condition among multiple price conditions.
- \* D. Header condition:
  - \* A Header condition is a setting in the condition type configuration that determines whether a condition is applied at the header level (affecting the entire document) or the item level (affecting specific items). For example, a header condition might apply a flat surcharge to the entire sales order, while item conditions like PROO or PR02 apply to specific materials.
  - \* While header conditions affect how a condition is applied, they do not control whether only one price condition is selected from multiple price conditions at the item level.
  - \* Why incorrect: The Header condition setting is unrelated to ensuring that only one price condition (e.g., PROO, PR02, PN00, or HM00) is applied.

Why Exclusion Indicator is the Correct Choice

- \* The Exclusion indicator is part of the condition exclusion configuration in the pricing procedure. It is used to manage scenarios where multiple price condition types (e.g., PROO for standard price, PR02 for promotional price, PN00 for net price, HM00 for manual price) are defined, but only one should be applied to avoid conflicting prices.
- \* For example:
  - \* In the pricing procedure (transaction V/08), you define a condition exclusion group and assign PROO, PR02, PN00, and HM00 to it.
  - \* You set an exclusion rule, such as:
    - \* Rule A: Select the condition with the lowest price.
    - \* Rule B: Select the condition with the highest price.
    - \* Rule C: Select the first valid condition in the sequence.
  - \* During sales order processing, the system evaluates the conditions in the exclusion group, applies the rule, and deactivates all other conditions in the group, ensuring only one price is used.
  - \* This is a common setup in SAP S/4HANA to handle scenarios with multiple price conditions, such as standard prices, promotional prices, or customer-specific prices, ensuring clarity and consistency in pricing.

Practical Context

- \* In the SAP system, condition exclusion is configured in the following path:
  - \* SPRO > Sales and Distribution > Basic Functions > Pricing > Condition Exclusion > Condition Exclusion for Groups of Conditions.
  - \* Alternatively, use transaction VOK8 to maintain condition exclusion groups and assign condition types.
  - \* During sales order creation, the system checks the pricing procedure, identifies the exclusion group, and applies the exclusion rule to select one condition type (e.g., PROO) while deactivating others (e.g., PR02, PN00, HM00).
  - \* For example, if PROO has a price of \$100, PR02 has \$90, and the exclusion rule is "select the lowest price," the system will apply PR02 and exclude the others.

Why Other Options Don't Fit

- \* Condition function: Not a standard SAP term or setting for controlling exclusivity.
- \* Condition class: Defines the type of condition (e.g., price vs. discount) but doesn't manage exclusivity between multiple price conditions.
- \* Header condition: Controls the level of application (header vs. item) but doesn't determine which price condition is selected.

#### NEW QUESTION # 54

When performing backorder processing, which confirmation strategies can you select? Note: There are 3 correct answers to this question.

- A. Gain
- B. Drop
- C. Fill
- D. Redistribute
- E. Obtain

**Answer: A,C,D**

Explanation:

Sales Process and Analytics

#### NEW QUESTION # 55

You are configuring the organizational structure in your system. Which assignments are possible? Note: There are 3 correct answers to this question.

- A. Assign a shipping point to multiple plants.
- B. Assign multiple plants to one company code.
- C. Assign multiple distribution channels to one company code.
- D. Assign a plant to multiple sales organizations/distribution channels.
- E. Assign multiple loading points to a plant.

**Answer: A,B,E**

Explanation:

Possible organizational structure assignments include:

B . Assign multiple loading points to a plant: A plant can have several loading points, which are places within the plant from where goods are loaded for shipping.

C . Assign multiple plants to one company code: Multiple plants can operate under the same company code, representing legal and accounting entities.

E . Assign a shipping point to multiple plants: A shipping point, the place where goods are shipped from, can serve multiple plants, facilitating centralized distribution.

#### NEW QUESTION # 56

When you create a sales order with reference to a quotation, you want to ensure the entire quotation is always included in the order. Where do you make this setting?

- A. Order item category
- B. Quotation type
- C. Copying control
- D. Order type

**Answer: C**

Explanation:

Shipping Process and Customizing

#### NEW QUESTION # 57

How does the system determine the warehouse number in an order-to-cash process?

- A. It is linked to a combination of plant and distribution channel.
- B. It is linked to a combination of sales area and plant.
- C. It is linked to a combination of plant and shipping point.

- D. It is linked to a combination of plant and storage location.

Answer: D

## NEW QUESTION # 58

.....

The SAP C\_TS462\_2023 practice questions come with three easy-to-use and install formats. The certification for the SAP C\_TS462\_2023 exam is a valuable, well-recognized professional credential. You can develop your skills and become a recognized specialist with the SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Sales C\_TS462\_2023 Certification in addition to learning about new technology requirements.
