300-720 Study Tool - 300-720 Test Torrent & Securing Email with Cisco Email Security Appliance Guide Torrent

We know that time is really important to you. So that as long as we receive you email or online questions about our 300-720 study materials, then we will give you information as soon as possible. If you do not receive our email from us, you can contact our online customer service right away for we offer 24/7 services on our 300-720 learning guide. We will solve your problem immediately and let you have 300-720 exam questions in the least time for you to study.

Cisco Securing Email with Cisco Email Security Appliance Sample Questions (Q103-Q108):

NEW QUESTION # 103

Email encryption is configured on a Cisco ESA that uses CRES.
Which action is taken on a message when CRES is unavailable?

- A. It is requeued.
- B. It is encrypted by a Cisco encryption appliance.
- C. It is dropped and an error message is sent to the sender.
- D. It is sent in clear text.

Answer: A

Explanation:

Overview of Cisco Email Encryption

AsyncOS supports using encryption to secure inbound and outbound email. To use this feature, you create an encryption profile that specifies characteristics of the encrypted message and connectivity information for the key server. The key server may either be:

- The Cisco Registered Envelope Service (managed service), or
- An Cisco Encryption appliance (locally managed server)

Next, you create content filters, message filters, and Data Loss Prevention policies to determine which messages to encrypt.

1. An outgoing message that meets the filter condition is placed in a queue on the Email Security appliance for encryption processing.
2. Once the message is encrypted, the key used to encrypt it is stored on the key server specified in the encryption profile and the encrypted message is queued for delivery.
3. If a temporary condition exists that prohibits the encryption of emails in the queue (i.e., temporary C-Series busyness or CRES unavailability), messages are re-queued and retried at a later time.

NEW QUESTION # 104

Spreadsheets containing credit card numbers are being allowed to bypass the Cisco ESA.

Which outgoing mail policy feature should be configured to catch this content before it leaves the network?

- A. outbreak filtering
- B. file analysis
- C. data loss prevention
- D. file reputation filtering

Answer: A

NEW QUESTION # 105

Refer to the exhibits. What must be done to enforce end user authentication before accessing quarantine?

- A. Change the end user quarantine access from None authentication to SAAS.
- B. Enable SPAM notification and use LDAP for authentication.
- C. Change the end user quarantine access setting from None authentication to Mailbox.
- D. Enable SPAM Quarantine Notification and add the %quarantine_url% variable.

Answer: C

Explanation:

Reference:

Changing the end user quarantine access setting from None authentication to Mailbox is the correct way to enforce end user authentication before accessing quarantine. This setting requires the end users to enter their email address and password in order to access their personal quarantine on the Cisco ESA.

The other options are not valid ways to enforce end user authentication before accessing quarantine, because they do not affect the end user quarantine access setting.

NEW QUESTION # 106

Which feature utilizes sensor information obtained from Talos intelligence to filter email servers connecting into the Cisco ESA?

- A. Talos Reputation Filtering
- B. Connection Reputation Filtering
- **C. SenderBase Reputation Filtering**
- D. SpamCop Reputation Filtering

Answer: C

NEW QUESTION # 107

Which feature must be configured before an administrator can use the outbreak filter for nonviral threats?

- A. antivirus
- B. data loss prevention
- C. quarantine threat level
- **D. antispam**

Answer: D

Explanation:

The feature that must be configured before an administrator can use the outbreak filter for nonviral threats is antispam. The outbreak filter relies on the antispam engine to detect and block nonviral threats, such as phishing, malware, or spam campaigns. You need to enable antispam scanning and configure the antispam settings before you can use the outbreak filter.
