

Avail Fantastic CIS-DF Latest Materials to Pass CIS-DF on the First Attempt

DOWNLOAD the newest PremiumVCEDump CIS-DF PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1mJRqtuWUDrxwDgqk1IAXffB WJeLXPk>

Standing out among all competitors and taking the top spot is difficult but we made it by our CIS-DF preparation materials. They are honored for their outstanding quality and accuracy so they are prestigious products. Our CIS-DF exam questions beat other highly competitive companies on a global scale. They provide a high pass rate for our customers as 98% to 100% as a pass guarantee. And as long as you follow with the CIS-DF Study Guide with 20 to 30 hours, you will be ready to pass the exam.

ServiceNow CIS-DF Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• CSDM Fundamentals: This domain establishes Common Services Data Model knowledge including stakeholder collaboration for CI classification, CSDM methodology adherence, and understanding implementation benefits.
Topic 2	<ul style="list-style-type: none">• Govern: This domain focuses on CMDB quality management through health metrics, Data Manager policies, governance frameworks, stakeholder roles, duplicate remediation, operationalization, and lifecycle management.
Topic 3	<ul style="list-style-type: none">• Configuration: This domain covers CMDB technical setup including CI Class Manager for table hierarchies, IRE for data accuracy, and CMDB 360• multisource configuration for comprehensive CI views.
Topic 4	<ul style="list-style-type: none">• Ingest: This domain addresses data ingestion methods, CI relationship management, automation tools, upgrade compatibility, handling non-discoverable CIs and attributes, compliance tracking, and Asset-CI alignment.
Topic 5	<ul style="list-style-type: none">• Insight: This domain covers extracting value from CMDB data using Natural Language Query, custom reports, dependency views, product integrations, and Foundation Dashboards for actionable insights.

Latest CIS-DF Test Questions | CIS-DF Exam Preview

We are well-known for our wonderful performance on pushing more and more candidates to pass their CIS-DF exams and achieve their dreaming certifications. There is no exaggeration to say that with our CIS-DF study materials for 20 to 30 hours, you will be ready to pass your CIS-DF Exam. Since our CIS-DF exam torrent is designed on the purpose to be understood by our customers

all over the world, it is compiled into the simplest language to save time and efforts.

ServiceNow Certified Implementation Specialist - Data Foundations (CMDB and CSDM) Sample Questions (Q85-Q90):

NEW QUESTION # 85

Drag and drop the CMDB Health Dashboard metric to the correct description.

Answer:

Explanation:

Explanation:

The CMDB Health Dashboard organizes data quality into practical, action-oriented metrics:

- Audits validate correctness by comparing CI values against defined expectations (rules, policies, certifications).
- Duplicate CIs represent redundant records and should be reduced to improve trust and reporting accuracy.
- Orphan CIs lack required relationships or key context, limiting impact analysis and service visibility.
- Recommended fields are not mandatory but add diagnostic value during incidents and problem investigations.
- Required fields are enforced by the platform and closely tied to Identification & Reconciliation remediation.
- Stale CIs signal aging data that no longer reflects the current environment.

This mapping aligns with CMDB Data Foundations best practices and how the Health Dashboard is designed to guide prioritization and remediation.

NEW QUESTION # 86

A Service Owner is using Unified Map to understand the composition of a service but wants to filter irrelevant information. Which options are available to the Service Owner from the filter panel? (Choose 2 options)

- A. Managed by group
- B. Discovery source
- C. Business criticality
- D. CI type

Answer: C,D

Explanation:

The Unified Map in ServiceNow provides a consolidated view of services and their underlying components, integrating Discovery and Service Mapping data. To make this view actionable, Service Owners can apply filters to focus on relevant elements and reduce visual noise.

Filtering by CI type (Option A) is a core capability. It allows the Service Owner to show or hide categories such as servers, databases, load balancers, or applications—making it easier to analyze specific layers of the service.

Filtering by Business Criticality (Option D) is also available and highly valuable. This enables Service Owners to prioritize views around high-impact components, ensuring attention is focused on CIs that pose the greatest risk to service delivery.

Option B (Discovery source) is not typically exposed as a Unified Map filter because the map focuses on operational and service context, not ingestion provenance. Option C (Managed by group) is a governance attribute and is not a standard visual filter within the Unified Map.

Thus, the correct filter options are A - CI type and D - Business criticality.

NEW QUESTION # 87

Drag and Drop Question

ACMDB Administrator seeks to understand the available tools for preventing, addressing, and remediating duplicate CIs. Drag and drop each feature with the corresponding outcome. Some options may not apply.

Answer:

Explanation:

Explanation:

In ServiceNow, duplicate CI management spans detection, insight, and remediation:

The CMDB Health Dashboard Correctness surfaces where duplicates exist and their impact, providing visibility and prioritization.

Certification Tasks support governed resolution, allowing assignment to individuals or groups to validate and correct data.

De-duplication Templates enable bulk remediation, ideal when standardized merge rules can be applied across many duplicates.

The Duplicate CI Remediator offers a guided, record-by-record wizard, preserving relationships and history for safer individual resolutions.

De-duplication Tasks are the work items generated by these processes, but they do not themselves represent an outcome--hence not applicable.

This mapping aligns with CMDB Data Foundations best practices, ensuring duplicates are identified, prioritized, and remediated efficiently and safely.

NEW QUESTION # 88

The Configuration Management team wants to confirm that all servers in the CMDB actually exist in the data center. Which CMDB Data Manager policy type would the team create? (Choose 1 option)

- A. Attestation
- B. Retire
- C. Delete
- D. Archive
- E. Certification

Answer: A

Explanation:

Within ServiceNow Data Foundations, CMDB Data Manager provides multiple policy types to support governance, data quality, and lifecycle management of configuration items (CIs). The scenario described--confirming that servers recorded in the CMDB physically exist in the data center--is a classic example of existence validation and ownership confirmation, which is exactly the purpose of an Attestation policy.

An Attestation policy is designed to request a human validation from a responsible individual or group (such as a data center manager, platform owner, or infrastructure team). The policy generates attestation tasks that require reviewers to explicitly confirm whether a CI is valid, accurate, and still exists. This aligns directly with CMDB governance best practices and ITIL 4 Service Configuration Management, where periodic verification ensures trust in the CMDB as a system of record.

NEW QUESTION # 89

A CMDB Administrator needs to set up CMDB 360/Multisource CMDB Drag and drop the system property to the functionality Some options may not apply.

Answer:

Explanation:

Explanation:

In ServiceNow, CMDB 360 / Multisource CMDB extends the Identification and Reconciliation Engine (IRE) to support multi-source visibility, reconciliation, and confidence scoring. Configuration is controlled through system properties, each enabling a specific capability.

`glide.identification_engine.multisource_enabled` is the master switch that activates CMDB 360 functionality.

`glide.identification_engine.multisource_cmdb_ci_enabled` allows CMDB 360 to collect and evaluate data specifically from CMDB CI classes.

`glide.cmdb.logger.source.cmdb_multisource` enables detailed logging for troubleshooting multisource ingestion and reconciliation.

`glide.identification_engine.multisource_recompute.max_ci_limit` protects performance by limiting how many CIs can be processed during a recompute operation.

Capturing CMDB 360 data from non-CMDB classes is not supported, which is why no property applies to that option.

This mapping aligns with Data Foundations and CMDB governance best practices, ensuring CMDB 360 is enabled safely, transparently, and at scale.

NEW QUESTION # 90

.....

Certification CIS-DF exam on the first attempt. The demand of the Certified Implementation Specialist - Data Foundations (CMDB and CSDM) exam is growing at a rapid pace day by day and almost everyone is planning to pass it so that they can improve

themselves for better futures in the PremiumVCEDump sector. CIS-DF has tried its best to make this learning material the most user-friendly so the applicants don't face excessive issues.
