USGBC LEED-Green-Associate Sure Pass & New LEED-Green-Associate Braindumps

Are you worried about how to pass the terrible USGBC LEED-Green-Associate exam? Do not worry, With PrepPDF's USGBC LEED-Green-Associate exam training materials in hand, any IT certification exam will become very easy. PrepPDF's USGBC LEED-Green-Associate Exam Training materials is a pioneer in the USGBC LEED-Green-Associate exam certification preparation.

USGBC LEED Green Associate Exam Sample Questions (Q360-Q365):

NEW QUESTION # 360

ASHRAE standards are applicable to which of the following LEED categories?

- A. Sustainable Sites and Energy and Atmosphere
- B. Water Efficiency and Indoor Environmental Quality
- C. Materials and Resources and Sustainable Sites
- D. Energy and Atmosphere and Indoor Environmental Quality

Answer: D

NEW QUESTION # 361

LEED considers products to be environmentally preferable materials when they are

- A. transported by air rather than rail
- B. cost effective
- C. materials with more life-cycle impact
- **D. locally extracted, manufactured and purchased**

Answer: D

Explanation:

LEED considers products to be environmentally preferable when they are locally extracted, manufactured, and purchased. This is because local sourcing reduces the environmental impact associated with transportation, supports local economies, and can often ensure that the materials are suitable for the local climate and conditions. Reference: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

NEW QUESTION # 362

in the triple bottom line which of the following capital resources represents the costs and benefits of a project for all the stakeholders?

- A. Economic
- **B. Social**
- C. Natural
- D. Community

Answer: B

NEW QUESTION # 363

The project team for a new office building would like to achieve Materials and Resources Credit, Construction and Demolition Waste Management. Which strategy contributes to achieving this goal?

- A. Providing a centralized location in the building for recycling office products
- B. Providing an off-site location for all waste and construction debris
- **C. Providing an on-site location for all waste to be sorted**
- D. Purchasing Renewable Energy Certificates (RECs)

Answer: C

Explanation:

LEED's MR Credit: Construction and Demolition Waste Management encourages diverting construction waste from landfills. Sorting waste on-site improves tracking accuracy and diversion rates.

"Divert at least 50% of the total construction and demolition material... using on-site separation."

- LEED v4 BD+C Reference Guide, MR Credit: Construction and Demolition Waste Management

NEW QUESTION # 364

Which of the following sites is most appropriate to encourage a walkable street design?

- A. A development that uses many culs-de-sac in the street design
- B. A project in an area designed with streets to facilitate increased speed limits
- **C. A neighborhood that includes a diversity of use**
- D. An area with a decreased building-height-to-street-width ratio

Answer: C

Explanation:

A neighborhood that includes a diversity of uses is most appropriate to encourage a walkable street design. A diversity of uses means that different types of activities and functions are located within walking distance of each other, such as residential, commercial, retail, educational, recreational, cultural, and civic uses. A diversity of uses creates a vibrant and lively neighborhood

that attracts pedestrians and supports social interaction. A walkable street design also incorporates elements such as sidewalks, crosswalks, street trees, lighting, benches, bike lanes, public transit stops, and reduced vehicle speeds to enhance pedestrian safety and comfort. The other options are not appropriate to encourage a walkable street design. An area with a decreased building-height-to-street-width ratio creates a wide and open street that exposes pedestrians to more sun and wind, reducing their comfort level. A development that uses many culs-de-sac in the street design creates a disconnected and irregular street network that limits pedestrian access and mobility. A project in an area designed with streets to facilitate increased speed limits prioritizes vehicle movement over pedestrian safety and comfort.
