Sending alerts to external systems (e.g., SIEMs, ticketing systems, SOAR platforms).

Triggering actions based on specific incident rules.

Integrating with third-party solutions for remediation, escalation, or logging.

- A. Frequently change SOC vendors for the best deals.
- B. Use a single agent across all client networks.
- **C. Deploy a multi-tenancy SOC solution.**
- D. Set up individual SOC environments for each client.

Answer: C

NEW QUESTION # 45

Refer to the exhibit.

The service provider deployed FortiSIEM without a collector and added three customers on the supervisor. What mistake did the administrator make?

- A. Collectors must be deployed on all customer premises before they are added to organization on the supervisor.
- B. At least one collector must be deployed to collect logs from service provider infrastructure devices.
- C. Customer A and customer B have overlapping IP addresses.
- D. The number of workers on the FortiSIEM cluster must match the number of customers added

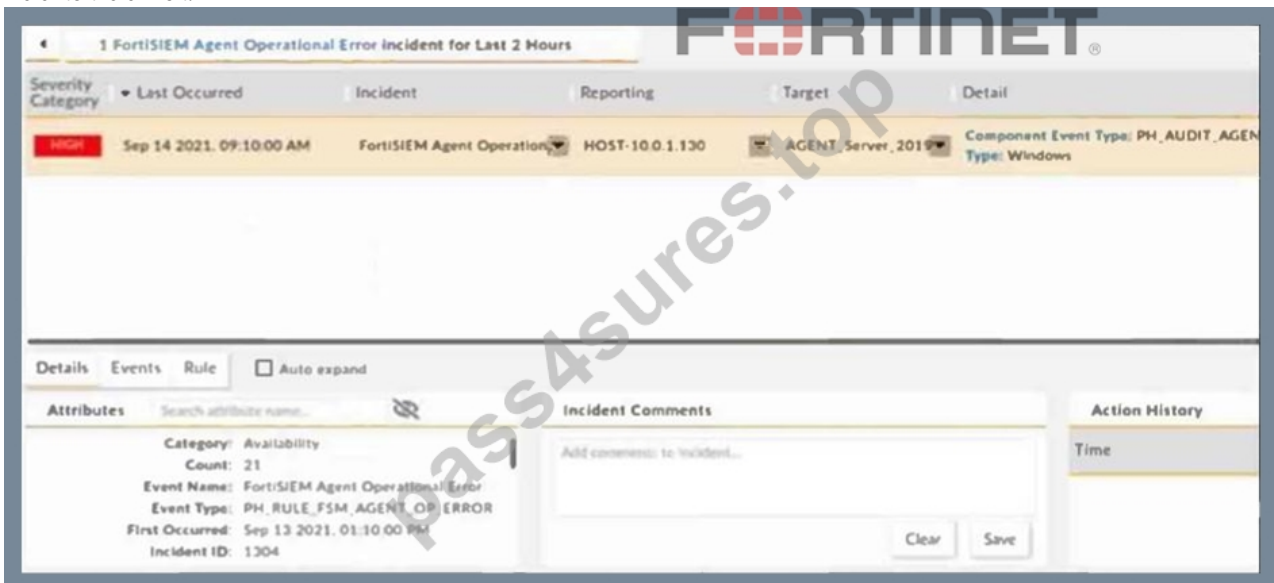

Answer: B

Explanation:

The administrator deployed FortiSIEM without a collector, meaning there is no dedicated system collecting logs from service provider infrastructure devices. Without a collector, the FortiSIEM supervisor and workers must directly ingest logs, which is not ideal for a multi-tenant service provider setup. A collector is necessary to efficiently gather logs before forwarding them to the FortiSIEM cluster.

Refer to the exhibit.

How long has the UEBA agent been operationally down?

- A. 21 Hours

- B. 20 Hours
- C. 9 Hours
- D. 2 Hours

Answer: B

Explanation:

Based on the provided exhibit, we can determine how long the UEBA agent has been operationally down by looking at the "First Occurred" and "Last Occurred" timestamps.

*First Occurred: Sep 13, 2021, at 01:10 PM
