Success in the Developing Solutions for Microsoft Azure (AZ-204) certification exam helps people update their skills. Many aspirants don't find updated Microsoft AZ-204 practice test questions and fail the final test. This failure in the Microsoft AZ-204 Exam leads to a loss of money and time. If you are also planning to attempt the Developing Solutions for Microsoft Azure (AZ-204) exam and are confused about where to prepare yourself for it then you are at the right place.

All our team of experts and service staff are waiting for your mail on the AZ-204 exam questions all the time. As long as you encounter obstacles in the learning process on our AZ-204 training guide, send us an email and we will solve it for you at the first time. Please believe that AZ-204 Learning Materials will be your strongest backing from the time you buy our AZ-204 practice braindumps to the day you pass the exam.

Real AZ-204 Dumps Free, Reliable AZ-204 Test Questions

As a prestigious platform offering practice material for all the IT candidates, BootcampPDF experts try their best to research the best valid and useful Microsoft AZ-204 exam dumps to ensure you 100% pass. The contents of AZ-204 exam training material cover all the important points in the AZ-204 Actual Test, which can ensure the high hit rate. You can instantly download the Microsoft AZ-204 practice dumps and concentrate on your study immediately.

Skills Tested in AZ-204

AZ-204 covers different topics that come in form of the following objectives:

1. **Consume and connect to Azure and 3rd-Party Services** — managing the questions under this domain, the candidate will demonstrate advanced skills and knowledge when it comes to:
 - *App service logic development* – it is concerned with the creation of Logic App, custom connector, and custom template for logic apps.

- *API Management implementation* – it covers APIM instance, the configuration of API authentication, and defining policies for API
 - *Event-based solutions development* – this deals with the implementing solutions that use Azure Notification Hubs, Azure Event Grid, and Azure Event Hub.
 - *Message-based solutions development* – the main focus of this subtopic is implementing solutions that utilize Azure Queue Storage and Azure Service Bus.
2. **Troubleshoot, optimize, and monitor Azure solutions** — this section aims at giving the candidates a top-notch understanding of how to make Microsoft Azure very efficient and effective. There are two subdomains that are as follows:
- *Integration of content delivery and caching within solutions* – the learner will be equipped with the profound skills and knowledge to write code that implements CDNs in solutions as well as configuring cache and policies of expiration for CDNs, FrontDoor, etc.
 - *Supporting logging and monitoring through instrument solutions* – the main focus of this subsection is to enlighten the candidate with knowledge of the configuration of instrumentation using Application Insights, implementing Application Insights Web Alerts and tests as well as developing an algorithm that catches errors or handles transient faults.
3. **Implement Azure security** — this domain is majorly concerned enlightening the applicants with better techniques to secure the Microsoft Azure web platform. The main areas covered are:
- *Implementing user authorization and authentication* – implementation of OAuth2 authentication, shared access signatures, and role-based access controls are some of the important concepts here
 - *Implementation of secure cloud solutions* – this involves securing the application data using KeyVault API and App configuration as well as implementing identities for Azure resources.
4. **Develop for Azure storage** — this domain focuses on blob storage as well as Cosmos DB. It majorly focuses on the appropriate data techniques that aim at reducing data redundancies through server-side programming. It also extends to developing solutions for archiving and restoring data.
5. **Design Azure compute solutions** — this section covers the implementation of Azure functions, IaaS solutions, and working with Azure App Service Web Apps. The candidate will have to prove extensive knowledge and skills in the provision and configuration of virtual machines for Azure. The concepts under this domain extend to designing long lasting Azure functions using timers, data operations, and webhooks.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q155-Q160):

NEW QUESTION # 155

You need to ensure that network security policies are met.

How should you configure network security? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Technology Value

SSL certificate

	▼
Valid root certificate	
Self-signed certificate	

Proxy type

	▼
nginx	
Azure Application Gateway	

Answer:

Explanation:

Technology	Value						
SSL certificate	<table border="1"> <tr> <td></td> <td>▼</td> </tr> <tr> <td colspan="2">Valid root certificate</td> </tr> <tr> <td colspan="2">Self-signed certificate</td> </tr> </table>		▼	Valid root certificate		Self-signed certificate	
	▼						
Valid root certificate							
Self-signed certificate							
Proxy type	<table border="1"> <tr> <td></td> <td>▼</td> </tr> <tr> <td colspan="2">nginx</td> </tr> <tr> <td colspan="2">Azure Application Gateway</td> </tr> </table>		▼	nginx		Azure Application Gateway	
	▼						
nginx							
Azure Application Gateway

NEW QUESTION # 156

QUESTION 1

You need to correct the RequestUserApproval Function app error.

What should you do?

- A. Update the function to be stateful by using Durable Functions to process the request payload.
- B. Update line RA13 to use the async keyword and return an HttpRequest object value.
- C. Update the functionTimeout property of the host.json project file to 15 minutes.
- D. Configure the Function app to use an App Service hosting plan. Enable the Always On setting of the hosting plan.

Answer: A

Explanation:

Async operation tracking

The HTTP response mentioned previously is designed to help implement long-running HTTP async APIs with Durable Functions.

This pattern is sometimes referred to as the polling consumer pattern.

Both the client and server implementations of this pattern are built into the Durable Functions HTTP APIs.

Function app

You perform local testing for the RequestUserApproval function. The following error message displays:

'Timeout value of 00:10:00 exceeded by function: RequestUserApproval'

The same error message displays when you test the function in an Azure development environment when you run the following Kusto query:

FunctionAppLogs

| where FunctionName == "RequestUserApproval"

Reference:

<https://docs.microsoft.com/en-us/azure/azure-functions/durable/durable-functions-http-features>

NEW QUESTION # 157

You are implementing a software as a service (SaaS) ASP.NET Core web service that will run as an Azure Web App. The web service will use an on-premises SQL Server database for storage. The web service also includes a WebJob that processes data updates. Four customers will use the web service.

* Each instance of the WebJob processes data for a single customer and must run as a singleton instance.

* Each deployment must be tested by using deployment slots prior to serving production data.

* Azure costs must be minimized.

* Azure resources must be located in an isolated network.

You need to configure the App Service plan for the Web App.

How should you configure the App Service plan? To answer, select the appropriate settings in the answer area.

NOTE: Each correct selection is worth one point.

App service plan setting	Value
Number of VM instances	2
Pricing tier	Isolated

Answer:

Explanation:

App service plan setting

Value

Number of VM instances

▼
2
4
8
16

Pricing tier

▼
Isolated
Standard
Premium
Consumption

Explanation:

App service plan setting

Value

Number of VM instances

▼
2
4
8
16

Pricing tier

▼
Isolated
Standard
Premium
Consumption

Number of VM instances: 4

You are not charged extra for deployment slots.

Pricing tier: Isolated

The App Service Environment (ASE) is a powerful feature offering of the Azure App Service that gives network isolation and improved scale capabilities. It is essentially a deployment of the Azure App Service into a subnet of a customer's Azure Virtual Network (VNet).

NEW QUESTION # 158

You develop a gateway solution for a public facing news API.

The news API back end is implemented as a RESTful service and hosted in an Azure App Service instance.

You need to configure back-end authentication for the API Management service instance.

Which target and gateway credential type should you use? To answer, drag the appropriate values to the correct parameters. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Values	Answer Area
	Configuration parameter
Azure Resource	Target
HTTP(s) endpoint	Gateway credentials
Basic	
Client cert	

Answer:

Explanation:

Values	Answer Area
	Configuration parameter
Azure Resource	Target
HTTP(s) endpoint	Gateway credentials
Basic	
Client cert

NEW QUESTION # 159

You need to add code at line AM09 to ensure that users can review content using ContentAnalysisService.

How should you complete the code? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐ "allowPublicClient": true ☐ "oauth2Permissions": ["login"] ☐ "oauth2AllowUrlPathMatching": true ☐ "oauth2AllowIdTokenImplicitFlow": true
☐ "oauth2AllowImplicitFlow": true ☐ "oauth2RequiredPostResponse": true ☐ "preAuthorizedApplications": ["SPA"] ☐ "knownClientApplications": ["ContentAnalysisService"]

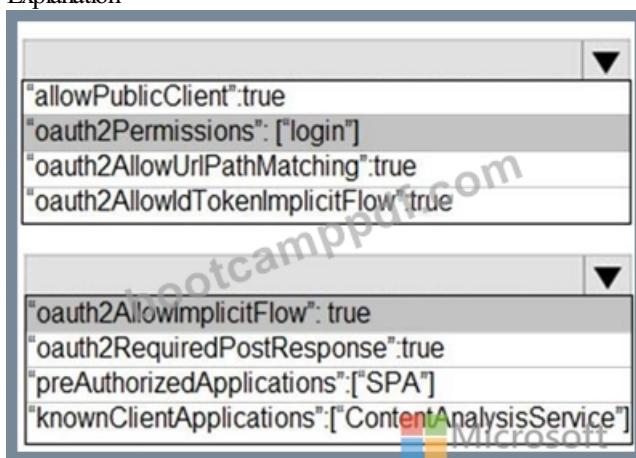

Answer:

Explanation:

```
"allowPublicClient":true
"oauth2Permissions":["login"]
"oauth2AllowUrlPathMatching":true
"oauth2AllowIdTokenImplicitFlow":true
```

```
"oauth2AllowImplicitFlow": true
"oauth2RequiredPostResponse":true
"preAuthorizedApplications":["SPA"]
"knownClientApplications":["ContentAnalysisService"]
```

Explanation

Box 1: "oauth2Permissions": ["login"]

oauth2Permissions specifies the collection of OAuth 2.0 permission scopes that the web API (resource) app exposes to client apps. These permission scopes may be granted to client apps during consent.

Box 2: "oauth2AllowImplicitFlow":true

For applications (Angular, Ember.js, React.js, and so on), Microsoft identity platform supports the OAuth 2.0 Implicit Grant flow.
