The HP HPE7-A01 certification exam always gives a tough time to their candidates. So you have to plan well and prepare yourself as per the recommended HP HPE7-A01 exam study material. For the quick and complete HPE7-A01 exam preparation the PassSureExam HP HPE7-A01 Practice Test questions are the ideal selection. With the PassSureExam HP HPE7-A01 PDF Questions and practice test software, you will get everything that you need to learn, prepare and pass the difficult HPE7-A01 exam with good scores.

To pass the HP HPE7-A01 Exam, candidates need to have a solid understanding of networking concepts, protocols, and technologies. They should also have experience working with Aruba wireless and wired networks. Candidates can prepare for the exam by taking Aruba training courses, studying Aruba documentation, and practicing with sample exam questions. Passing the exam leads to the Aruba Certified Campus Access Professional certification, which is recognized by IT organizations worldwide.

Earning the Aruba Certified Campus Access Professional certification can open up new career opportunities in the field of IT networking. Aruba Certified Campus Access Professional Exam certification is recognized worldwide and demonstrates a level of expertise and proficiency in Aruba technologies. Additionally, certified professionals are eligible for advanced training and career advancement opportunities within their organizations.

HPE7-A01 Relevant Answers - Test HPE7-A01 Simulator

All HPE7-A01 exam questions are available at an affordable cost and fulfill all your training needs. PassSureExam knows that applicants of the HP HPE7-A01 examination are different from each other. Each candidate has different study styles and that's why we offer our HP HPE7-A01 product in three formats. These formats are HPE7-A01 PDF, desktop practice test software, and web-based practice exam.

HP HPE7-A01 exam, also known as the Aruba Certified Campus Access Professional exam, is a certification test designed for IT professionals who specialize in wireless networking technologies. HPE7-A01 exam focuses on testing the candidates' knowledge and skills in various areas, including ArubaOS switches, WLAN design and implementation, authentication and security, and troubleshooting. Passing HPE7-A01 Exam demonstrates that the candidate has a high level of proficiency in designing and deploying Aruba wireless networks, configuring network access controls, and troubleshooting complex network issues.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q169-Q174):

NEW QUESTION # 169

By default, Best Effort is higher priority than which priority traffic type?

- A. Internet Control
- B. All queues
- C. Background
- D. Network Control

Answer: C

Explanation:

Explanation

This is because Best Effort traffic is all other kinds of non-detrimental traffic that are not sensitive to Quality of Service metrics (jitter, packet loss, latency). A typical example would be peer-to-peer and email applications². Background traffic is a type of traffic that is used for system maintenance or backup purposes and does not affect the performance or availability of the network³.

Therefore, Best Effort traffic has a higher priority than Background traffic in terms of network resources allocation and management.

NEW QUESTION # 170

Review the exhibit. You are troubleshooting an issue with a 10.102.39.0/24 subnet which is also VLAN 1000 used for wireless clients on a pair of Aruba CX 8360 switches. The subnet SVI is configured on the 8360 pair, and the DHCP server is a Microsoft Windows Server 2022 Standard with an IP address of 10.200.1.100. The 10.102.250.0/24 subnet is used for switch management. A large number of DHCP requests are failing. You are observing sporadic DHCP behavior across clients attached to the CX 6100 switch.

Which action may help fix the issue?

- A.
- B.
- C.
- D.

Answer: A

Explanation:

Option C is the only action that configures the DHCP relay on the SVI of VLAN 1000 on the CX

8360 switches. DHCP relay is a feature that allows a switch to forward DHCP requests from clients in one subnet to a DHCP server in another subnet. DHCP relay is required when the DHCP server and the clients are not in the same broadcast domain.

Option C uses the following commands:

interface vlan 1000: This command enters the interface configuration mode for the SVI of VLAN

1000, which has an IP address of 10.102.39.1/24 and is used for wireless clients. ip helper-address vrf default 10.200.1.100: This command configures the IP address of the DHCP server as a helper address for the SVI, which means that the switch will forward DHCP requests from clients on VLAN 1000 to this address. The vrf default parameter indicates that the SVI and the DHCP server are in the same VRF.

NEW QUESTION # 171

With Aruba CX 6300, how do you configure ip address 10 10 10 1 for the interface in default state for interface 1/1/1?

- A. int 1/1/1, routing, ip address 10.10.10 1/24
- B. int 1/1/1, no switching, ip address 10 10 10.1/24
- C. int 1/1/1, switching, ip address 10 10 10 1/24
- D. int 1/1/1, ip address 10.10.10.1/24

Answer: B

Explanation:

Explanation

To configure an IP address for an interface in default state for interface 1/1/1 on Aruba CX 6300 switch, you need to disable switching on the interface first with the command `no switching`. Then you can assign an IP address with the command `ip address`. The other options are incorrect because they either do not disable switching or use invalid keywords such as `switching` or `routing`.

NEW QUESTION # 172

You are deploying Aruba CX 6300's with the customers requirement to only allow one (1) VoIP phone and one (1) device.

The following local role gets assigned to the phone port-access role VoIP device-traffic-class voice What set of commands best fits this requirement?

- A. interface 1/1/1
aaa authentication port-access client-limit multi-domain 2
aaa authentication port-access auth-mode multi-domain
- B. interface 1/1/1
aaa authentication port-access auth-mode multi-domain
- C. interface 1/1/1
aaa authentication port-access client-limit 2
aaa authentication port-access auth-mode client-mode
- D. interface 1/1/1
aaa authentication port-access client-limit 1
aaa authentication port-access auth-mode device-mode

Answer: A

Explanation:

Aruba CX 6300 switches support various features to control the port access for different types of devices, such as client mode, device mode, and multidomain mode. These features can help limit the number of clients that can connect to a port and prevent unauthorized devices from accessing the network.

This is because option C shows how to configure the client limit and the auth-mode for a specific port using the interface command and the aaa authentication port-access command. The client limit specifies the maximum number of clients that can connect to a port. The auth-mode specifies the authentication mode for the port. In this case, option C sets both parameters to multi-domain mode, which allows only one voice device and one data device to be authenticated on a port.

NEW QUESTION # 173

By default, Best Effort is higher priority than which priority traffic type?

- A. Internet Control
- B. All queues
- C. Background
- D. Network Control

Answer: C
