Our SCP-NPM exam questions can meet your needs to the maximum extent, and our SCP-NPM learning materials are designed to the greatest extent from the customer's point of view. So you don't have to worry about the operational complexity. As soon as you enter the learning interface of our system and start practicing our SCP-NPM Learning Materials on our Windows software, you will find small buttons on the interface. It is very easy and convenient to use and find.

The SCP-NPM certification exam covers a wide range of topics related to network performance monitoring, including installation and configuration, device discovery, network mapping, performance monitoring, alerting and reporting, and troubleshooting. SCP-NPM exam is designed to be comprehensive, and successful candidates are expected to have a deep understanding of how to use SolarWinds NPM to monitor and optimize network performance. SolarWinds Network Performance Monitor (NPM) Exam certification exam is administered online, and candidates are given a set amount of time to complete the exam. Upon successful completion of the exam, candidates are awarded the SCP-NPM Certification, which is valid for three years.

SolarWinds NPM is a powerful tool that helps IT professionals monitor and manage network performance with ease. With NPM, IT teams can quickly identify performance issues, troubleshoot problems, and ensure that network devices and applications are running smoothly. The SCP-NPM certification exam is intended to help IT professionals gain a deeper knowledge of NPM and improve their skills in network performance monitoring.

Real Exam Questions & Answers - SolarWinds SCP-NPM Dump is Ready

All these three SCP-NPM exam questions formats are easy to use and compatible with all devices, operating systems, and web browsers. Just choose the best SCP-NPM exam questions format and start SolarWinds SCP-NPM exam preparation without wasting further time. As far as the price of SolarWinds Network Performance Monitor (NPM) Exam exam practice test questions is concerned, these exam practice test questions are being offered at a discounted price. Get benefits from SCP-NPM Exam Questions at discounted prices and download them quickly. Best of luck in SCP-NPM exam and career!!!

The SCP-NPM Certification Exam is designed for IT professionals who have experience with network performance monitoring and management. It is ideal for network administrators, network engineers, and IT managers who are responsible for managing and maintaining complex networks. To obtain this certification, candidates must pass a rigorous exam that tests their knowledge and skills in using the NPM tool to monitor and manage network performance.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q72-Q77):

NEW QUESTION # 72

You monitor three Cisco routers with NPM. NPM reports utilization statistics for two of the routers. NPM only shows Availability and Response Time statuses for the third router. Why do you not see utilization statistics on the third router?

- A. SNMP is not configured correctly on the third node
- B. The third node is monitored with the NPM agent
- C. The third node is monitored with SNMP instead of ICMP
- D. The third node is monitored with WMI instead of SNMP

Answer: A

Explanation:

NPM uses SNMP to collect utilization statistics from network devices, such as routers, switches, firewalls, etc. If NPM only shows Availability and Response Time statuses for a device, it means that SNMP is not configured correctly on that device or NPM cannot access the device via SNMP1. Some possible reasons for this are:

The device does not support SNMP or SNMP is disabled on the device

The device has a different SNMP version or community string than NPM

The device has a firewall or access control list that blocks SNMP traffic from NPM. The device has a misconfigured SNMP agent or MIB. To troubleshoot this issue, you can use the SNMP Test Tool in NPM to verify the SNMP settings and connectivity of the device2. You can also check the device logs and configuration to ensure that SNMP is enabled and properly configured3.

NEW QUESTION # 73

When a router monitored by NPM reboots, the interface indexes statuses change to unknown in NPM. What do you do after you remove the unknown interfaces?

- A. Update the NPM internal ID numbers
- B. Run a list of resources on that node and add the interfaces with the updated index IDs
- C. Run the Configuration Wizard to update the interface indexes
- D. Manually update the interface indexes

Answer: B

Explanation:

When a router monitored by NPM reboots, the interface indexes may change, causing the interface statuses to become unknown in NPM. This is because NPM uses the interface indexes to identify and poll the interfaces.

To resolve this issue, you need to remove the unknown interfaces from NPM and then run a list of resources on that node to discover the interfaces with the new index IDs. You can then add the interfaces back to NPM and resume monitoring them.

NEW QUESTION # 74

What is required to monitor tenants in your SDN environment with NPM Cisco ACI monitoring? (Choose all that apply.)

- A. Enable API polling on the APIC node
- B. Enable API polling on all ACI devices
- C. View your SDN environment in Orion Maps
- D. Add an APIC node to NPM

Answer: A,D

NEW QUESTION # 75

You configure an alert to send you an email when you have a high CPU load on your devices. Your NPM web console shows several devices have high CPU utilization, but you have not received any emails. What could be the issue?

- A. The alert threshold is set too high
- B. The hardware resources assigned to the system are too low
- C. SNMP is not configured on the devices
- D. The alerts are muted on the devices

Answer: D

NEW QUESTION # 76

You can display Palo Alto firewalls on Orion Maps.

- A. False
- B. True

Answer: B

Explanation:

Orion Maps 2.0 supports displaying Palo Alto firewalls as network devices, along with their interfaces, zones, policies, and traffic data. You can also view the firewall status, alerts, and events on the map. To add a Palo Alto firewall to an Orion Map, you need to have Network Insight for Palo Alto enabled in NPM, and discover the firewall using SNMP and API polling.
