With ITIL-4-Practitioner-Release-Management guide torrent, you may only need to spend half of your time that you will need if you didn't use our products successfully passing a professional qualification exam. In this way, you will have more time to travel, go to parties and even prepare for another exam. The benefits of ITIL-4-Practitioner-Release-Management Study Guide for you are far from being measured by money. ITIL-4-Practitioner-Release-Management guide torrent has a first-rate team of experts, advanced learning concepts and a complete learning model. You give us a trust and we reward you for a better future.

Peoplecert ITIL-4-Practitioner-Release-Management Exam Syllabus Topics:

Topic	Details
Topic 1	Change: This section of the exam measures the skills of DevOps Engineers and focuses on how to manage and control changes within IT environments. It includes planning, executing, monitoring, and communicating changes to ensure minimal disruption while keeping stakeholders informed about the progress and impact of changes.
Topic 2	Service Design: This section of the exam measures the skills of IT Release Managers and covers the principles and practices involved in designing services and products that are practical, useful, and aligned with stakeholder expectations. It focuses on ensuring that services are designed in a way that they can be effectively delivered and supported by the organization and its partners.
Topic 3	AI and Automation: This section of the exam measures the skills of IT Operations Managers and addresses the use of AI and automation in delivering IT systems and applications that align with user needs. It ensures that software releases meet quality standards, are delivered on time, and stay within budget, using modern tools and intelligent technologies.

Exam ITIL-4-Practitioner-Release-Management Quizzes - ITIL-4-Practitioner-Release-Management New Braindumps Questions

It is similar to the ITIL-4-Practitioner-Release-Management desktop-based software, with all the elements of the desktop practice exam. This ITIL-4-Practitioner-Release-Management exam can be accessed from any browser and does not require installation. The ITIL-4-Practitioner-Release-Management questions in the mock test are the same as those in the real exam. And candidates

will be able to take the web-based ITIL-4-Practitioner-Release-Management Practice Test immediately through any operating system and browsers.

Peoplecert ITIL 4 Practitioner: Release Management Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20

A service provider is reviewing its release management practice. It has been found that most releases meet their objectives and are delivered on time. However, teams and organizations using the service provider's services are complaining that sometimes software updates interrupt their work during peak business hours.

What should the service provider do to improve the release management practice by applying the 'collaborate and promote visibility' guiding principle?

- A. Review the effectiveness of release models
- **B. Ensure an excellent user experience**
- C. Do not overcomplicate the practice
- D. Optimize the practice for the value streams

Answer: B

Explanation:

The 'collaborate and promote visibility' guiding principle in ITIL 4 emphasizes working with stakeholders to ensure transparency and alignment with their needs. The ITIL 4 Practitioner: Release Management document advises: "Applying the 'collaborate and promote visibility' principle involves working closely with stakeholders, such as service consumers, to understand their needs and ensure releases do not disrupt their operations, thereby ensuring an excellent user experience" (Section 5.1).

* The issue is that updates interrupt work during peak hours, indicating a lack of collaboration with users to understand their schedules and needs.

* Option A (Ensure an excellent user experience) directly addresses this by implying collaboration with users to schedule releases at non-disruptive times, aligning with the principle.

* Option B (Review the effectiveness of release models) is an internal activity and doesn't directly involve collaboration with stakeholders.

* Option C (Optimize the practice for the value streams) focuses on value stream efficiency but doesn't specifically address user collaboration.

* Option D (Do not overcomplicate the practice) is unrelated to the collaboration principle.

The correct answer is A, as ensuring an excellent user experience through collaboration directly applies the principle to address the issue.

NEW QUESTION # 21

A retail organization is hiring a new release manager. The vacancy description indicates that successful candidates should have good knowledge of technologies and platforms used by the organization, good knowledge of ITIL and DevOps, and experience in retail. What other skill is important to the release management role?

- A. Knowledge of service management frameworks
- B. Understanding of the organization's business
- C. Technical expertise
- **D. Project planning and coordination**

Answer: D

Explanation:

The release management role in ITIL 4 requires a range of competencies to ensure effective coordination and execution of releases. The ITIL 4 Practitioner: Release Management document states: "A release manager must have strong project planning and coordination skills to manage the scheduling, communication, and execution of releases, ensuring alignment with organizational goals and minimal disruption" (Section 3.3).

* Option A (Knowledge of service management frameworks) is already covered by the requirement of ITIL knowledge in the vacancy description, so it's not an additional skill.

* Option B (Project planning and coordination) is a critical skill for release managers, as they need to orchestrate complex release activities, manage timelines, and coordinate with stakeholders, which isn't explicitly covered by the listed requirements.

* Option C (Technical expertise) is implied by the requirement for knowledge of technologies and platforms, so it's not an additional skill.

* Option D (Understanding of the organization's business) is important but less specific to release management compared to project planning, and the retail experience requirement already covers business context.
The correct answer is B, as project planning and coordination is a key additional skill for effective release management.

NEW QUESTION # 22

What is a description of a release?

- A. All updated service versions that are mandatory for users
- B. The repeated building and testing of code leading to deployment
- C. A set of new service features that will benefit users
- D. The guidelines for collating two or more changes

Answer: C

Explanation:

In ITIL 4, a release is defined as the output of the release management practice that is made available to users.

The ITIL 4 Practitioner: Release Management document states: "A release is a version of a service or a set of service components that is made available for use. It often includes new or changed features that deliver value to users" (Section 2.2).

* Option A (A set of new service features that will benefit users) aligns with the definition, as a release typically includes new or changed features intended to provide value to users.

* Option B (The repeated building and testing of code) describes a development process (e.g., continuous integration), not the release itself.

* Option C (All updated service versions that are mandatory for users) is incorrect because releases are not always mandatory; ITIL 4 allows for push or pull approaches.

* Option D (Guidelines for collating changes) describes a process or policy, not the release itself.

The correct description of a release is a set of features or components made available for use, making A the correct answer.

NEW QUESTION # 23

A release manager is considering the involvement of third parties in the release management practice. Which release management activity is likely to have a dependency on third parties?

- A. Verifying a release according to the release plan
- B. Release management alignment with other practices
- C. Performing a release according to an agreed model
- D. Identifying an applicable model for a release instance

Answer: C

Explanation:

Third parties, such as suppliers or vendors, often play a role in the execution of releases, especially when they provide components or services involved in the release. The ITIL 4 Practitioner: Release Management document states: "Performing a release according to an agreed model often involves dependencies on third parties, such as suppliers providing software updates, infrastructure, or support services, which need to be integrated during the release execution" (Section 3.4).

* Option A (Release management alignment with other practices) is an internal coordination activity, less likely to directly involve third parties.

* Option B (Identifying an applicable model) is a planning activity typically handled internally by the release manager.

* Option C (Performing a release according to an agreed model) directly involves executing the release, which often requires third-party components or services, creating a dependency.

* Option D (Verifying a release) may involve third-party tools but is less dependent on their active participation compared to execution.

The correct answer is C, as performing the release is the activity most likely to depend on third parties.

NEW QUESTION # 24

A release manager has noticed that the organization has many standardized services provided to international organizations. Which aspect of release management will this situation directly affect?

- A. The release plans

- B. Continuous integration
- **C. The release models**
- D. Continuous delivery

Answer: C

Explanation:

Standardized services provided to international organizations imply a need for consistency and scalability in how releases are managed across diverse contexts. The ITIL 4 Practitioner: Release Management document explains that release models are used to standardize the approach to releases: "Release models define the structure, contents, and schedule of releases... They ensure consistent and repeatable processes, which is particularly important for organizations with standardized services" (Section 3.2.2).

* Option A (The release plans) refers to specific plans for individual releases, which may be affected indirectly but are not the primary aspect impacted by standardization needs.

* Option B (Continuous integration) and Option C (Continuous delivery) are development practices that may interact with release management but are not directly affected by the need for standardization across international services.

* Option D (The release models) is directly affected, as standardized services require well-defined release models to ensure consistency, repeatability, and scalability across international contexts.

The situation directly impacts the design and application of release models to accommodate standardized services globally. Thus, the correct answer is D.

NEW QUESTION # 25

.....

The software keeps track of the previous ITIL 4 Practitioner: Release Management Exam (ITIL-4-Practitioner-Release-Management) practice exam attempts and shows the changes of each attempt. You don't need to wait days or weeks to get your performance report. The software displays the result of the ITIL 4 Practitioner: Release Management Exam (ITIL-4-Practitioner-Release-Management) practice test immediately, which is an excellent way to understand which area needs more attention.
