Splunk SPLK-1002下載 & 最新SPLK-1002題庫資源

Splunk 提供的認證具有一種震撼力，業界人士都知道，擁有 SPLK-1002 認證指南，將意味著在全球範圍內可獲得一個令人羨慕的工作和豐厚的優惠待遇。而 PDFExamDumps 的 SPLK-1002 權威考試題庫軟體是 Splunk 認證廠商的授權產品，可以保證考生第一次參加 SPLK-1002 考試的考生即可順利通過，否則承諾全額退款。

最新的 Splunk Core Certified Power User SPLK-1002 免費考試真題 (Q119-

Q124):

問題 #119

Which of the following statements describe the Common Information Model (CIM)? (select all that apply)

- A. CIM can correlate data from different sources.
- B. CIM is an app that can coexist with other apps on a single Splunk deployment.
- C. CIM is a methodology for normalizing data.
- D. The Knowledge Manager uses the CIM to create knowledge objects.

答案: A,C,D

解題說明:

Reference:<https://docs.splunk.com/Documentation/CIM/4.15.0/User/Overview>

The Common Information Model (CIM) is a methodology for normalizing data from different sources and making it easier to analyze and report on it³. The CIM defines a common set of fields and tags for various domains such as Alerts, Email, Database, Network Traffic, Web and more³. One of the statements that describe the CIM is that it is a methodology for normalizing data, which means that it provides a standard way to name and structure data from different sources so that they can be compared and correlated³. Therefore, option A is correct. Another statement that describes the CIM is that it can correlate data from different sources, which means that it enables you to run searches and reports across data from different sources that share common fields and tags³. Therefore, option B is correct. Another statement that describes the CIM is that the Knowledge Manager uses the CIM to create knowledge objects, which means that the person who is responsible for creating and managing knowledge objects such as data models, field aliases, tags and event types can use the CIM as a guide to make their knowledge objects consistent and compatible with other apps and add-ons³. Therefore, option C is correct. Option D is incorrect because it does not describe the CIM but rather one of its components.

問題 #120

If there are fields in the data with values that are "" or empty but not null, which of the following would add a value?

- A. | eval notNULL = if(isnull(notNULL), "0")
- B. | eval notNULL = if(isnull(notNULL), "0" notNULL)
- C. | eval notNULL = "" fillnull value=0 notNULL
- D. | eval notNULL = "" | nullfill value=0 notNULL

答案: C

解題說明:

The correct answer is D. | eval notNULL = "" fillnull value=0 notNULL

Option A is incorrect because it is missing a comma between the "0" and the notNULL in the if function. The correct syntax for the if function is if(condition, true_value, false_value).

Option B is incorrect because it is missing the false_value argument in the if function. The correct syntax for the if function is if(condition, true_value, false_value).

Option C is incorrect because it uses the nullfill command, which only replaces null values, not empty strings. The nullfill command is equivalent to fillnull value=null.

Option D is correct because it uses the eval command to assign an empty string to the notNULL field, and then uses the fillnull command to replace the empty string with a zero. The fillnull command can replace any value with a specified replacement, not just null values.

問題 #121

There are several ways to access the field extractor.

Which option automatically identifies the data type, source type, and sample event?

- A. Settings > Field Extractions > New Field Extraction
- B. Event Actions > Extract Fields
- C. Fields sidebar > Extract New Fields
- D. Settings > Field Extractions > Open Field Extractor

答案： B

解題說明：

Explanation/Reference: <https://docs.splunk.com/Documentation/Splunk/8.0.4/Knowledge/Managesearch-timefieldextractions>

問題 #122

Which knowledge object is used to normalize field names to comply with the Splunk Common Information Model (CIM)?

- A. Tags
- B. Event types
- C. Field alias
- D. Search workflow action

答案： C

解題說明：

The correct answer is

A) Field alias¹²³.

In Splunk, a field alias is a knowledge object that you can use to assign an alternate name to a field³. This can be particularly useful when you want to normalize your data to comply with the Splunk Common Information Model (CIM)¹².

The CIM provides a methodology for normalizing values to a common field name¹. It acts as a search-time schema to define relationships in the event data while leaving the raw machine data intact². By using field aliases, you can map vendor fields to common fields that are the same for each data source in a given domain⁴. This allows you to correlate events from different source types by normalizing these different occurrences to a common structure and naming convention¹.

問題 #123

Which of the following can be used with the eval command tostring function? (Choose all that apply.)

- A. "duration"
- B. "decimal"
- C. "hex"
- D. "commas"

答案： A,C,D

解題說明：
