SPLK-2002 Study Demo & New SPLK-2002 Test Discount
Our SPLK-2002 Research materials design three different versions for all customers. These three different versions include PDF version, software version and online version, they can help customers solve any problems in use, meet all their needs. Although the three major versions of our SPLK-2002 Learning Materials provide a demo of the same content for all customers, they will meet different unique requirements from a variety of users based on specific functionality.

As for candidates who will attend the exam, choosing the practicing materials may be a difficult choice. Then just trying SPLK-2002 learning materials of us, with the pass rate is 98.95%, we help the candidates to pass the exam successfully. Many candidates have sent their thanks to us for helping them to pass the exam by using the SPLK-2002 Learning Materials. The reason why we gain popularity in the customers is the high-quality of SPLK-2002 exam dumps. In addition, we provide you with free update for one year after purchasing. Our system will send the latest version to you email address automatically.

Pass Guaranteed 2026 SPLK-2002: Authoritative Splunk Enterprise Certified Architect Study Demo

Customizable Splunk SPLK-2002 practice exams (desktop and web-based) of PDFBraindumps are designed to give you the best learning experience. You can attempt these SPLK-2002 practice tests multiple times till the best preparation for the Splunk Enterprise Certified Architect (SPLK-2002) test. On every take, our Splunk SPLK-2002 practice tests save your progress so you can view it to see and strengthen your weak concepts easily.

Splunk Enterprise Certified Architect Sample Questions (Q127-Q132):

NEW QUESTION # 127
Which of the following is true regarding Splunk Enterprise performance? (Select all that apply.)

- A. Adding RAM to an existing search heads provides additional search capacity.
- B. Adding search peers increases the maximum size of search results.
- C. Adding search heads provides additional CPU cores to run more concurrent searches.
- D. Adding search peers increases the search throughput as search load increases.

Answer: A,C

Explanation:
Explanation/Reference: https://docs.splunk.com/Documentation/Splunk/7.3.2/Capacity/HowsavedsearchesaffectSplunkEnterpriseperformance

NEW QUESTION # 128
The master node distributes configuration bundles to peer nodes. Which directory peer nodes receive the bundles?

- A. deployment-apps
- B. apps
- C. slave-apps
- D. master-apps

Answer: C

Explanation:
The master node distributes configuration bundles to peer nodes in the slave-apps directory under $SPLUNK_HOME/etc. The configuration bundle method is the only supported method for managing common configurations and app deployment across the set of peers. It ensures that all peers use the same versions of these files1. Bundles typically contain a subset of files (configuration files and assets) from $SPLUNK_HOME/etc/system, $SPLUNK_HOME/etc/apps, and $SPLUNK_HOME/etc/users2. The process of distributing knowledge bundles means that peers by default receive nearly the entire contents of the search head's apps3.

NEW QUESTION # 129
A monitored log file is changing on the forwarder. However, Splunk searches are not finding any new data that has been added. What are possible causes? (select all that apply)

- A. The first 256 bytes of the monitored file are not changing.
- B. The last 256 bytes of the monitored file are not changing.
- C. An admin ran splunk clean eventdata -index <indexname> on the indexer.
- D. An admin has removed the Splunk fishbucket on the forwarder.

Answer: B,D

Explanation:
A monitored log file is changing on the forwarder, but Splunk searches are not finding any new data that has been added. This could be caused by two possible reasons:
B: An admin has removed the Splunk fishbucket on the forwarder.
C: The last 256 bytes of the monitored file are not changing. Option B is correct because the Splunk fishbucket is a directory that stores information about the files that have been monitored by Splunk, such as the file name, size, modification time, and CRC checksum. If an admin removes the fishbucket, Splunk will lose track of the files that have been previously indexed and will not index any new data from those files. Option C is correct because Splunk uses the CRC checksum of the last 256 bytes of a monitored file to determine if the file has changed since the last time it was read. If the last 256 bytes of the file are not changing, Splunk will assume that the file is unchanged and will not index any new data from it. Option A is incorrect because running the splunk clean eventdata -index <indexname> command on the indexer will delete all the data from the specified index, but it will not affect the forwarder's ability to send new data to the indexer. Option D is incorrect because Splunk does not use the first 256 bytes of a monitored file to determine if the file has changed12

NEW QUESTION # 130
Consider a use case involving firewall data. There is no Splunk-supported Technical Add-On, but the vendor has built one. What are the items that must be evaluated before installing the add-on? (Select all that apply.)

- A. Identify number of scheduled or real-time searches.
- B. Verify if Technical Add-On needs to be installed onto both a search head or indexer.
- C. Validate if this Technical Add-On enables event data for a data model.
- D. Identify the maximum number of forwarders Technical Add-On can support.

Answer: A,C

Explanation:
A Technical Add-On (TA) is a Splunk app that contains configurations for data collection, parsing, and enrichment. It can also enable event data for a data model, which is useful for creating dashboards and reports.

Therefore, before installing a TA, it is important to identify the number of scheduled or real-time searches that will use the data model, and to validate if the TA enables event data for a data model. The number of forwarders that the TA can support is not relevant, as the TA is installed on the indexer or search head, not on the forwarder. The installation location of the TA depends on the type of data and the use case, so it is not a fixed requirement

NEW QUESTION # 131

Which of the following server. conf stanzas indicates the Indexer Discovery feature has not been fully configured (restart pending) on the Master Node?

- A. □
- B. □
- C. □
- D. □

Answer: C

Explanation:
The Indexer Discovery feature enables forwarders to dynamically connect to the available peer nodes in an indexer cluster. To use this feature, the manager node must be configured with the [indexer_discovery] stanza and a pass4SymmKey value. The forwarders must also be configured with the same pass4SymmKey value and the master_uri of the manager node. The pass4SymmKey value must be encrypted using the splunk
_encrypt command. Therefore, option A indicates that the Indexer Discovery feature has not been fully configured on the manager node, because the pass4SymmKey value is not encrypted. The other options are not related to the Indexer Discovery feature. Option B shows the configuration of a forwarder that is part of an indexer cluster. Option C shows the configuration of a manager node that is part of an indexer cluster. Option D shows an invalid configuration of the [indexer_discovery] stanza, because the pass4SymmKey value is not encrypted and does not match the forwarders' pass4SymmKey value12
