### NEW QUESTION # 27

Which SAP Business AI solutions are used for automating business workflows? Note: There are 2 correct answers to this question.

- A. SAP SuccessFactors
- B. SAP Conversational AI
- C. SAP Intelligent Robotic Process Automation (RPA)
- D. SAP Extended Warehouse Management

**Answer: B,C**

Explanation:

SAP Business AI provides solutions to automate business workflows, streamlining repetitive tasks and enhancing process efficiency. The correct answers are SAP Intelligent Robotic Process Automation (RPA) and SAP Conversational AI, as these solutions are specifically designed to automate workflows using AI-driven capabilities.

SAP documentation states: "SAP Intelligent RPA automates repetitive business tasks such as data entry, document processing, and workflow execution by combining robotic process automation with AI capabilities." This enables organizations to streamline processes like invoice processing or order management, reducing manual effort. SAP Conversational AI, powered by Joule, supports workflow automation by "enabling natural language interactions to trigger and manage business processes." For example, Joule can "automate case classification and resolve customer inquiries" by integrating with workflow systems, enhancing efficiency in service and support processes.

The incorrect options-SAP Extended Warehouse Management and SAP SuccessFactors-are not focused on general workflow automation. SAP Extended Warehouse Management is tailored to logistics and inventory management, not broad workflow automation. SAP SuccessFactors focuses on HR processes, such as recruitment and talent management, not general business workflows. SAP's emphasis on automation, as seen in solutions like SAP Business Technology Platform, confirms the suitability of SAP Intelligent RPA and SAP Conversational AI for this purpose.

SAP documentation states: "SAP AI in finance, embedded in solutions like SAP S/4HANA, improves financial forecasting and reporting through predictive analytics, automated risk assessment, and anomaly detection." AI-powered predictive analytics enables "forecasting expected incoming payments and financial trends" by analyzing historical and real-time data, as seen in SAP Collections Management. The incorrect options-conversational AI for customer service automation and SAP Blockchain for invoice validation-are not relevant to financial forecasting and reporting.
