The validation of expertise, more career opportunities, salary enhancement, instant promotion, and membership of Nutanix certified professional community.

## Nutanix Certified Associate v6.10 Sample Questions (Q18-Q23):

### NEW QUESTION # 18

What is the purpose of the OpLog?

- A. Persistent data storage
- B. Persistent write buffer
- C. Dynamic read cache
- D. Global metadata

**Answer: B**

Explanation:

The OpLog (Operational Log) in Nutanix serves as a persistent write buffer for incoming I/O operations. It temporarily stores write requests to ensure fast acknowledgment to clients and better performance. The data is later coalesced and written to the Extent Store for long-term storage.

- \* A. Persistent write buffer: Correct, as the OpLog optimizes write performance by buffering writes temporarily.
- \* B. Persistent data storage: Incorrect, as this describes the Extent Store, not the OpLog.
- \* C. Global metadata: Incorrect, as metadata operations are handled by the Metadata Store.
- \* D. Dynamic read cache: Incorrect, as read caching is managed separately, often involving SSD-based caches.

### NEW QUESTION # 19

Shared storage for Windows Server Failover Clustering (WSFC) is a use case for which Nutanix Unified Storage solution?

- A. Files
- B. FT1
- C. RF2
- D. Volumes

**Answer: D**

Explanation:

Shared storage for Windows Server Failover Clustering (WSFC) is a use case for Nutanix Volumes. Nutanix Volumes provides block storage (via iSCSI) to external systems, such as WSFC nodes, allowing them to share storage for failover clustering. This configuration is essential for high availability in Windows environments.

Other options:

- \* Files: Provides file-based storage (NFS/SMB), not suited for WSFC shared block storage.
- \* FT1 and RF2: Refer to Fault Tolerance and Redundancy Factor, not storage solutions.

### NEW QUESTION # 20

On a newly-deployed AHV cluster, what is the default virtual switch (vs0) uplink bond type?

- A. Balance-TCP
- B. Balance-SLB
- C. Active-Backup
- D. No Uplink Bond

**Answer: C**

### NEW QUESTION # 21

After starting LCM updates, an administrator would like to see a detailed view of each update as it progresses.

Which Prism Element dashboard should the administrator use to monitor the LCM updates?

- A. Analysis
- B. Alerts
- C. Hardware
- D. Tasks

**Answer: D**

### NEW QUESTION # 22

An administrator needs to license a new AOS-based cluster with no add-on packages via Nutanix Cloud Platform Package Licensing.

What license type would fulfill this requirement?

- A. Nutanix Unified Storage (NUS)
- B. Nutanix Cloud Manager (NCM)
- **C. Nutanix Cloud Infrastructure (NCI)**
- D. Nutanix Database Service (NDB)

**Answer: C**

Explanation:

To license a new AOS-based cluster with no add-on packages, the appropriate license type is Nutanix Cloud Infrastructure (NCI). The NCI license provides the fundamental capabilities required for Nutanix clusters, including:

- \* Storage and data management.
- \* Core virtualization features.
- \* Compute resources for workloads.

NCI is designed for organizations that need the essential features of the Nutanix platform without additional add-ons such as database services (NDB) or advanced storage options (NUS).

Other options:

- \* A. Nutanix Cloud Manager (NCM): Focuses on management capabilities for multi-cloud and operational tasks, not core infrastructure licensing.
- \* C. Nutanix Unified Storage (NUS): Specifically provides unified file and object storage capabilities, not relevant for a base AOS cluster.
- \* D. Nutanix Database Service (NDB): A dedicated licensing tier for database management features.
