Living in such a world where competitiveness is a necessity that can distinguish you from others, every one of us is trying our best to improve ourselves in every way. It has been widely recognized that the H12-891_V1.0 exam can better equip us with a newly gained personal skill, which is crucial to individual self-improvement in today's computer era. With the certified advantage admitted by the test H12-891_V1.0 Certification, you will have the competitive edge to get a favorable job in the global market. Here our H12-891_V1.0 exam braindumps are tailor-designed for you.

Huawei H12-891_V1.0 (HCIE-Datacom V1.0) Certification Exam covers a wide range of topics including network design, data communication technologies, network security, and troubleshooting. HCIE-Datacom V1.0 certification program is aimed at professionals with at least 5 years of experience in the field of data communication and who have a deep understanding of the concepts and technologies involved in designing and implementing complex data communication networks. H12-891_V1.0 Exam is designed to test the candidate's ability to apply their knowledge and skills to real-world scenarios, making it a rigorous and challenging certification program. Successful candidates can expect to be highly valued by organizations looking for professionals with the expertise to design, implement, and manage complex data communication networks.

100% Pass Quiz Efficient H12-891_V1.0 - New HCIE-Datacom V1.0 Test Price

Our H12-891_V1.0 training materials are famous at home and abroad, the main reason is because we have other companies that do not have core competitiveness, there are many complicated similar products on the market, if you want to stand out is the selling point of needs its own. Our H12-891_V1.0 test question with other product of different thing is we have the most core expert team to update our H12-891_V1.0 Study Materials, the H12-891_V1.0 practice test materials give supervision and update the progress every day, it emphasized the key selling point of the product.

Huawei HCIE-Datacom V1.0 Sample Questions (Q101-Q106):

NEW QUESTION # 101

With telemetry, certain data can be sampled based on specific sampling paths. Which of the following sampling paths are supported by telemetry?

- A. Memory information
- B. CPU information
- C. Information about the optical module on an interface
- D. Interface statistics

Answer: A,B,D

Explanation:

Telemetry Data Collection in Huawei Devices

Telemetry allows real-time streaming of network performance data based on predefined sampling paths. Supported sampling paths include:

A. Interface statistics

Monitors real-time traffic usage, errors, and packet loss on interfaces.

C. CPU information

Tracks CPU utilization and performance metrics.

D. Memory information

Monitors RAM usage and system memory consumption.

B. Information about the optical module on an interface

Telemetry does not natively support direct optical module monitoring; instead, SNMP or CLI commands like display transceiver are used.

Reference from Huawei HCIE-Datacom Documentation:

Huawei Telemetry Configuration Guide - Supported Sampling Paths

HCIE-Datacom Study Material - Network Performance Monitoring with Telemetry

NEW QUESTION # 102

When an NVE encapsulates a data frame into a VXLAN packet, information of which of the following protocols is encapsulated between the outer IP header and the VXLAN header?

- A. TCP
- B. Ethernet
- C. UDP
- D. IP

Answer: C

Explanation:

Comprehensive and Detailed In-Depth Explanation:

In VXLAN encapsulation, the data frame is encapsulated as follows:

Original Ethernet Frame: The data packet to be encapsulated.

VXLAN Header: Contains the VXLAN Network Identifier (VNI) and other information.

UDP Header: VXLAN uses UDP (User Datagram Protocol) to transport the encapsulated data over an IP network.

Outer IP Header: Provides the source and destination IP addresses of the VTEPs.

Therefore, the UDP header (C) is encapsulated between the outer IP header and the VXLAN header.

NEW QUESTION # 103

What are the ways to divide VLANs in Huawei switches? (Multi-select)

- A. Partitioning based on port
- B. Division based on MAC address.
- C. Division based on QoS
- D. Division based on protocol
- E. Subnetting based on IP.

Answer: A,B,D,E

NEW QUESTION # 104

MPLS is located between the data link layer and network layer in the TCP/IP protocol stack and can provide services for all network layer protocols.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

MPLS Positioning in the TCP/IP Model

MPLS (Multiprotocol Label Switching) operates between the Data Link Layer (Layer 2) and the Network Layer (Layer 3).

MPLS is protocol-independent and supports various network layer protocols (IPv4, IPv6, VPN, etc.) by using labels instead of traditional IP routing.

How MPLS Works:

* MPLS assigns labels to packets, allowing fast forwarding based on the label rather than a routing table lookup.

* Supports Layer 3 VPNs (L3VPNs), Layer 2 VPNs (L2VPNs), and MPLS Traffic Engineering (MPLS-TE).

Why MPLS is Between Layer 2 and Layer 3?

* MPLS adds a label between the Layer 2 (Ethernet, PPP) and Layer 3 (IP) headers, effectively creating a separate forwarding mechanism.

* Label Switching Routers (LSRs) forward packets based on labels instead of IP addresses, reducing processing time.

Reference from Huawei HCIE-Datcom Documentation:

* Huawei MPLS Technology Guide - MPLS Architecture and Label Switching

* HCIE-Datcom Study Material - MPLS Positioning and Functionality in TCP/IP

NEW QUESTION # 105

Which of the following is not the function of OSPFv3 Link-LSAs?

- A. Advertises the interface ID of the local router to other routers attached to the link.
- B. Advertises the Options field in the Network-LSA originated on the local link to other routers attached to the link.
- C. Advertises the link-local address of the local interface to other routers attached to the link.
- D. Advertises a list of IPv6 prefixes of the local interface to other routers attached to the link.

Answer: B

Explanation:

Link-LSA (Type 8) in OSPFv3 performs the following:

Advertises the router's link-local address to neighbors.

Advertises the router's interface ID on the link.

Carries IPv6 prefixes associated with the interface (since Router LSA no longer does this in OSPFv3).

The Options field in Link-LSA contains capabilities of the originating router, not the options from Network-LSA.

So, Option D is incorrect- the Link-LSA does not advertise options from the Network-LSA.

Correct answer: D

NEW QUESTION # 106

.....

The Huawei H12-891_V1.0 certification exam is a crucial part of career development in the tech sector. Cracking the HCIE-Datcom V1.0 (H12-891_V1.0) exam strengthens your chances of landing high-paying jobs and promotions. Yet, preparing for the H12-891_V1.0 Exam can be challenging, and many working applicants struggle to find H12-891_V1.0 practice test questions they require to be successful in their pursuit.
