dbt Labs dbt-Analytics-Engineering Advanced Testing Engine | dbt-Analytics-Engineering Exam Actual Tests

Three dbt-Analytics-Engineering exam questions formats that we have are dbt Analytics Engineering Certification Exam (dbt-Analytics-Engineering) dumps PDF format, web-based dbt-Analytics-Engineering practice exam and desktop-based dbt-Analytics-Engineering practice test software. Our dbt Labs dbt-Analytics-Engineering PDF dumps format has actual dbt-Analytics-Engineering Questions which are printable and portable. Hence, you can go through these dbt-Analytics-Engineering questions via your smart devices like smartphones, laptops, and tablets.

dbt Labs dbt Analytics Engineering Certification Exam Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which two code snippets result in a lineage line being shown in the DAG? Choose 2 options.

- A. `source('jaffle_shop.customers')`
- B. `source('source', 'table')`
- C. `ref('stg_jaffle_shop__customers')`
- D. `target.schema`
- E. `dbt_jsmith.stg_jaffle_shop__customers`

Answer: B,C

Explanation:

In dbt, the Directed Acyclic Graph (DAG) is created from model dependencies, which dbt identifies only through two mechanisms: the `ref()` function for referencing dbt models and the `source()` function for referencing declared sources. These functions are explicitly designed to tell dbt how models relate to each other so that dbt can track lineage, enforce build order, and generate documentation. Option A, `source('source', 'table')`, correctly references a declared source. Any model using `source()` establishes an upstream dependency on that source table. dbt will therefore draw a lineage line in the DAG from the source to the model.

Option B, `ref('stg_jaffle_shop__customers')`, is the canonical way to reference another dbt model. `ref()` ensures dbt determines dependencies at compile time, and thus creates a DAG edge between this model and its parent.

The remaining options do not create lineage:

- * C directly references a database object, which dbt cannot interpret as a dependency.
- * D uses a Ninja variable unrelated to lineage.
- * E is invalid, because `source()` requires two arguments: a source name and table name, not a dotted string.

Therefore, A and B are the only valid answers.

NEW QUESTION # 61

Several of your users report that dashboards built on top of your dbt models are intermittently displaying stale data. Which of the following might be a potential cause?

- A. All of the above.
- B. Source freshness checks are configured incorrectly, allowing older data to be processed
- C. Some models have incorrect materializations, causing them to not update when expected
- D. There are dependency issues in your DAG affecting execution order.

Answer: A

Explanation:

Each of these could lead to stale data. Start by examining freshness checks, then materializations, and if those are correct, inspect the DAG for execution bottlenecks.

NEW QUESTION # 62

(Multiple Select)

- A. Continuous Integration (CI) tools.
- B. Anomaly detection platforms.
- C. Tools specializing in schema change detection.
- D. Data integration testing frameworks (e.g., Great Expectations)

Answer: B,C,D

Explanation:

All of these address different aspects of advanced data validation that complement the basic tests within dbt. CI tools (D) are involved in running these checks but are not the data validation tools themselves.

NEW QUESTION # 63

You need to give read-only access to a specific dataset in your production data warehouse to a data analyst on your team. How might you approach this using dbt environments?

- A. Use row-level security features in your data warehouse and dynamically filter data in models using environment variables.
- B. Modify the data warehouse permissions directly to grant access to the required dataset.
- C. Create a dedicated dbt target for the analyst and utilize grants within your models to control access.
- D. A combination of the above, depending on the capabilities of your data warehouse.

Answer: D

Explanation:

A: Managing permissions in the data warehouse is often essential. B: dbt grants offer an additional layer of access control within your models. C: Row-level security provides fine-grained control but requires support from your data warehouse.

NEW QUESTION # 64

You're integrating a new API-based data source. Select the most suitable way to incorporate this into your dbt project.

- A. Utilize a dbt package tailored for the specific API, if available.
- B. Create a seed file to load the data directly into a table.
- C. Write a dbt macro to encapsulate the API interaction logic.
- D. Create a source with a loaded_at_field and write custom logic to snapshot API data.

Answer: A

Explanation:

Explanation: Pre-built packages streamline the integration of common APIs. Options A or B are workarounds, and D might be part of a custom solution but not the primary approach.

NEW QUESTION # 65

.....

For the dbt Analytics Engineering Certification Exam (dbt-Analytics-Engineering) web-based practice exam no special software installation is required. because it is a browser-based dbt Analytics Engineering Certification Exam (dbt-Analytics-Engineering) practice test.
