Reliable Test Microsoft AZ-140 Test, AZ-140 Valid Exam Simulator

With the ever-increasing competition, people take Microsoft AZ-140 certification to exhibit their experience, skills, and abilities in a better way. Having Configuring and Operating Microsoft Azure Virtual Desktop AZ-140 certificate shows that you have better exposure than others. So, AZ-140 Certification also gives you an advantage in the industry when employers seek candidates for job opportunities. However, preparing for the Microsoft AZ-140 exam can be a difficult and time-consuming process.

What is the cost of the Microsoft AZ-140 Exam

The cost of the Microsoft AZ-140 Exam is \$165 USD.

Microsoft AZ-140 exam, also known as Configuring and Operating Microsoft Azure Virtual Desktop, is designed for professionals who are responsible for configuring, managing, and deploying virtual desktop infrastructure (VDI) solutions using Azure Virtual Desktop. AZ-140 Exam validates the candidate's expertise in designing, implementing, and managing virtual desktops and applications on Azure, including monitoring and optimizing performance, ensuring security and compliance, and managing user access and data.

Microsoft Configuring and Operating Microsoft Azure Virtual Desktop Sample Questions (Q103-Q108):

NEW QUESTION # 103

You have an Azure Virtual Desktop deployment that contains a host pool named Pool1.

Pool1 contains five session hosts joined to an Active Directory Domain Services (AD DS) domain.

You plan to use the Azure portal to add additional session hosts and specify a custom configuration.

Which type of custom configuration should you use. and where should you store the custom configuration? To answer, select the

appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 104

Your network contains an on-premises Active Directory domain and a Windows Virtual Desktop deployment.

The computer accounts for all the session hosts are in an organizational unit (OU) named WVDHostsOU. All user accounts are in an OU named CorpUsers.

A domain administrator creates a Group Policy Object (GPO) named Policy1 that only contains user settings.

The administrator links Policy1 to WVDHostsOU.

You discover that when users sign in to the session hosts, none of the settings from Policy1 are applied.

What should you configure to apply GPO settings to the users when they sign in to the session hosts?

- A. mandatory Roaming User Profiles
- B. FSLogix profiles
- C. restricted groups
- D. loopback processing

Answer: D

NEW QUESTION # 105

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Azure Virtual Desktop host pool named Pool1 that is integrated with an Azure Active Directory Domain Services (Azure AD DS) managed domain.

You need to configure idle session timeout settings for users that connect to the session hosts in Pool1.

Solution: From the Azure portal, you modify the Session behavior settings in the RDP Properties of Pool1.

Does that meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:

<https://docs.microsoft.com/en-gb/learn/modules/configure-user-experience-settings/6-configure-session-timeout-properties>

NEW QUESTION # 106

You have an Azure subscription. The subscription contains a virtual machine named Server1 that runs Windows Server and is deployed to the West US Azure region.

You deploy a new Azure Virtual Desktop host pool named HostPool1 to the East US Azure region.

You need to ensure that all the traffic between HostPool1 and Server1 is routed via the Microsoft backbone network.

What should you use?

- A. virtual network peering
- B. routing tables

- C. Azure Traffic Manager
- D. service endpoints

Answer: D

Explanation:

Explanation

"Virtual Network (VNet) service endpoint provides secure and direct connectivity to Azure services over an optimized route over the Azure backbone network."

<https://learn.microsoft.com/en-us/azure/virtual-network/virtual-network-service-endpoints-overview>

NEW QUESTION # 107

You have an on-premises network and an Azure subscription. The subscription contains the following:

- * A virtual network
- * An Azure Firewall instance
- * A Azure Virtual Desktop host pool

The virtual network connects to the on-premises network by using a site-to-site VPN.

You need to ensure that only users from the on-premises network can connect to the Azure Virtual Desktop managed resources in the host pool. The solution must minimize administrator effort.

What should you configure?

- A. a network security group (NSG) rule
- B. a user-defined route
- C. an Azure Firewall rule
- D. a conditional access policy

Answer: D

NEW QUESTION # 108
