## Salesforce Certified Identity and Access Management Architect Sample Questions (Q164-Q169):

### NEW QUESTION # 164

What information does the 'Relaystate' parameter contain in sp-Initiated Single Sign-on?

- A. Reference to a URL redirect parameter at the service provider.

- B. Reference to a URL redirect parameter at the identity provider.
- C. Reference to the login address URL of the identity Provider.
- D. Reference to the login address URL of the service provider.

**Answer: A**

Explanation:

Explanation

The 'Relaystate' parameter is an HTTP parameter that can be included as part of the SAML request and SAML response. In an SP-initiated sign-in flow, the SP can set the RelayState parameter in the SAML request with additional information about the request, such as the URL of the resource that the user is trying to access.

The IDP should just relay it back in the SAML response without any modification or inspection. Therefore, the 'Relaystate' parameter contains a reference to a URL redirect parameter at the service provider<sup>123</sup>.

### NEW QUESTION # 165

Universal Containers (UC) is planning to deploy a custom mobile app that will allow users to get e-signatures from its customers on their mobile devices. The mobile app connects to Salesforce to upload the e-signature as a file attachment and uses OAuth protocol for both authentication and authorization. What is the most recommended and secure OAuth scope setting that an Architect should recommend?

- A. Api
- B. Web
- C. Id
- **D. Custom\_permissions**

**Answer: D**

### NEW QUESTION # 166

universal container plans to develop a custom mobile app for the sales team that will use salesforce for authentication and access management. The mobile app access needs to be restricted to only the sales team. What would be the recommended solution to grant mobile app access to sales users?

- A. Use the permission set license to assign the mobile app permission to sales users
- B. Use a custom attribute on the user object to control access to the mobile app
- C. Add a new identity provider to authenticate and authorize mobile users.
- **D. Use connected apps OAuth policies to restrict mobile app access to authorized users.**

**Answer: D**

### NEW QUESTION # 167

Universal containers (UC) has implemented ansp-Initiated SAML flow between an external IDP and salesforce. A user at UC is attempting to login to salesforce1 for the first time and is being prompted for salesforce credentials instead of being shown the IDP login page. What is the likely cause of the issue?

- A. The "Redirect to identity provider" option has not been selected the SAML configuration.
- B. The userhas not been granted the "Enable single Sign-on" permission
- C. The "Redirect to IdentityProvider" option has been selected in the my domain configuration.
- **D. The user has not configured the salesforce1 mobile app to use my domain for login**

**Answer: D**

Explanation:

B is correct because the user has not configured the Salesforce1 mobile app to use My Domain for login, which is the likely cause of the issue. The My Domain URL is used to redirect theuser to the identity provider' s login page and initiate the SP-Initiated SAML flow. If the user does not configure the Salesforce1 mobile app to use My Domain for login, they will be prompted for Salesforce

credentials instead of being shown the IDP loginpage. A is incorrect because the "Redirect to Identity Provider" option has been selected in the My Domain configuration, which is not the cause of the issue. The "Redirect to Identity Provider" option determines whether users are redirected to the identity provider's login page automatically or after clicking a button. C is incorrect because the "Redirect to Identity Provider" option has not been selected in the SAML configuration, which is not the cause of the issue. The "Redirect to Identity Provider" option determines whether users are redirected to the identity provider's login page automatically or after clicking a button. D is incorrect because the user has been granted the "Enable Single Sign-On" permission, which is not the cause of the issue. The "Enable Single Sign-On" permission allows users to use SSO with connected apps or external systems. Verified References: [My Domain URL], [SP-Initiated SAML Flow], [Redirect to Identity Provider Option], [Enable Single Sign-On Permission]

### NEW QUESTION # 168

Universal containers (UC) would like to enable self - registration for their salesforce partner community users. UC wants to capture some custom data elements from the partner user, and based on these data elements, wants to assign the appropriate profile and account values. Which two actions should the architect recommend to UC? Choose 2 answers

- A. Modify the communitiesselfregcontroller to assign the profile and account.
- B. Configure registration for communities to use a custom visualforce page.
- C. Configure registration for communities to use a custom apex controller.
- D. Modify the selfregistration trigger to assign profile and account.

**Answer: A,B**

Explanation:

Explanation

To enable self-registration for their Salesforce partner community users, UC should modify the communities' self-registration controller to assign the profile and account based on the custom data elements from the partner user1. UC should also configure registration for communities to use a custom Visualforce page to capture the custom data elements from the partner user2. Therefore, option A and C are the correct answers.
