

Simulated NGFW-Engineer Test, Valid NGFW-Engineer Exam Test

www.nwexam.com PDF

b) By replacing security policies with predefined rule sets
 c) By encrypting all traffic entering and leaving the zone
 d) By dynamically assigning users to security groups
Answer: a

03. After upgrading PAN-OS, which action is recommended to ensure that all features function correctly?
 a) Reboot the firewall multiple times.
 b) Reset all configurations to default.
 c) Verify and, if necessary, update content and application signatures.
 d) Disable and re-enable all interfaces.
Answer: c

04. In an authentication sequence, what happens if the "Continue on client cert failure" option is enabled?
 a) The firewall will skip client certificate authentication and proceed to the next authentication profile in the sequence.
 b) The firewall will deny access if the client certificate is invalid.
 c) The firewall will prompt the user to provide a valid client certificate.
 d) The firewall will log the failure and terminate the session.
Answer: a

05. Before upgrading a Palo Alto Networks firewall to a new PAN-OS version, which preliminary step is crucial to ensure a smooth upgrade process?
 a) Disable all security policies.
 b) Back up the current configuration.
 c) Reset the firewall to factory settings.
 d) Disable High Availability (HA) if configured.
Answer: b

06. How does a Palo Alto firewall handle traffic between two different security zones?
 a) Traffic is denied by default unless a security policy explicitly allows it
 b) Traffic is allowed automatically between zones
 c) Traffic is automatically encrypted between zones
 d) Traffic between zones is forwarded without inspection
Answer: a

07. For explicit proxy deployment, which port is typically used by the client browsers to send requests to the proxy?

NGFW-Engineer Sample Questions 5

What's more, part of that ValidDumps NGFW-Engineer dumps now are free: <https://drive.google.com/open?id=1hlu09LZSANKsUlhOWPCZvkFfIQ6WyG>

According to personal propensity and various understanding level of exam candidates, we have three versions of NGFW-Engineer study guide for your reference. They are the versions of the PDF, Software and APP online. If you visit our website on our NGFW-Engineer Exam Braindumps, then you may find that there are the respective features and detailed disparities of our NGFW-Engineer simulating questions. And you can free download the demos to have a look.

Palo Alto Networks NGFW-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • PAN-OS Networking Configuration: This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active • active and active • passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPSec, quantum-resistant cryptography, and GRE tunnels.

Topic 2	<ul style="list-style-type: none"> • PAN-OS Device Setting Configuration: This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings.
Topic 3	<ul style="list-style-type: none"> • Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics.

2026 Palo Alto Networks NGFW-Engineer: The Best Simulated Palo Alto Networks Next-Generation Firewall Engineer Test

Everyone has the right to pursue happiness and wealth. You can rely on the NGFW-Engineer certificate to support yourself. If you do not own one or two kinds of skills, it is difficult for you to make ends meet in the modern society. After all, you can rely on no one but yourself. At present, our NGFW-Engineer study materials can give you a ray of hope. You can get the NGFW-Engineer certification easily with our NGFW-Engineer learning questions and have a better future.

Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q100-Q105):

NEW QUESTION # 100

An organization uses Cloud Identity Engine (CIE) to gather user information from its on-premises Active Directory (AD) for employees and a separate Azure AD for external partners. Due to compliance regulations, the firewalls protecting the internal network must not have any identity information about external partners. Conversely, firewalls in the partner-facing DMZ should only be aware of partner identities.

Which CIE feature is designed to solve this data partitioning requirement?

- A. Panorama templates, which can be used to push different User-ID agent configurations to each firewall group
- B. Multiple tenants, where a separate CIE tenant is required for each user directory to maintain isolation
- C. Directory sync filtering, which is used at the source to prevent specific OUs from being imported into CIE
- **D. Segments, which can be configured to create distinct, filter-based views of users and groups that are then redistributed only to the appropriate firewalls**

Answer: D

Explanation:

Segments in Cloud Identity Engine allow administrators to create filtered, logical partitions of identity data and redistribute only the relevant users and groups to specific firewalls, ensuring strict separation of employee and partner identities in compliance-driven environments.

NEW QUESTION # 101

Without performing a context switch, which set of operations can be performed that will affect the operation of a connected firewall on the Panorama GUI?

- A. Restarting the local firewall, running a packet capture, accessing the firewall CLI
- B. Modification of pre-security rules, modification of a virtual router, modification of an IKE Gateway Network Profile
- C. Modification of post NAT rules, creation of new views on the local firewall ACC tab, creation of local custom reports
- **D. Modification of local security rules, modification of a Layer 3 interface, modification of the firewall device hostname**

Answer: D

Explanation:

In Panorama, without performing a context switch, the administrator can perform local configuration tasks directly on the connected firewall. The following operations can be done:

Modification of local security rules: Security rules can be modified directly on the connected firewall from the Panorama GUI.

Modification of a Layer 3 interface: Changes to the Layer 3 interfaces on the connected firewall can be done from Panorama, without needing to switch to the firewall's local interface.

Modification of the firewall device hostname: The firewall's hostname can be changed via Panorama.

NEW QUESTION # 102

Which type of firewall resource can be assigned when configuring a new firewall virtual system (VSYS)?

- A. Sessions limit
- B. Memory
- C. Security profile limit
- D. ICPUR

Answer: A

Explanation:

When configuring a new firewall virtual system (VSYS) on a Palo Alto Networks firewall, one of the resources that can be assigned is the sessions limit. This setting allows the administrator to control the number of active sessions that can be handled by the VSYS, ensuring that each virtual system has an appropriate allocation of resources based on its needs.

NEW QUESTION # 103

A firewall administrator uses Panorama to manage a fleet of firewalls. After successfully onboarding the firewalls to Strata Logging Service and enabling cloud logging via a template, the security operations team reports that they can no longer see new logs on the on-premises Panorama log collectors. Logs are appearing correctly in Strata Logging Service.

Which setting was likely missed in the Panorama template configuration?

- A. Duplicate logging (cloud and on-premises) is disabled under Device --> Setup --> Management.
- B. The Log Forwarding profile was modified to send logs only to the Strata Logging Service and no longer includes the on-premises Panorama log collectors.
- C. The device certificates for the Panorama log collectors were not renewed after enabling the cloud logging connection.
- D. The Panorama log collectors were not defined as primary destinations within the collector group configuration for the managed firewalls.

Answer: A

Explanation:

When cloud logging is enabled, logs are sent exclusively to Strata Logging Service unless duplicate logging is explicitly enabled. If duplicate logging is not enabled under Device → Setup

→ Management in the Panorama template, logs will no longer be forwarded to on-premises Panorama log collectors even though they appear correctly in Strata Logging Service.

NEW QUESTION # 104

An engineer is implementing a new rollout of SAML for administrator authentication across a company's Palo Alto Networks NGFWs. User authentication on company firewalls is currently performed with RADIUS, which will remain available for six months, until it is decommissioned. The company wants both authentication types to be running in parallel during the transition to SAML.

Which two actions meet the criteria? (Choose two.)

- A. Create an authentication sequence that includes both the "RADIUS" Server Profile and "SAML Identity Provider" Server Profile to run the two services in tandem.
- B. Create and add the "SAML Identity Provider" Server Profile to the authentication profile for the "RADIUS" Server Profile.
- C. Create a testing and rollback plan for the transition from Radius to SAML, as the two authentication profiles cannot be run in tandem.
- D. Create and apply an authentication profile with the "SAML Identity Provider" Server Profile.

Answer: A,B

Explanation:

To enable both RADIUS and SAML authentication to run in parallel during the transition period, you need to configure an authentication sequence and an authentication profile that includes both authentication methods.

By creating an authentication sequence that includes both RADIUS and SAML server profiles, the firewall will attempt authentication with RADIUS first and, if that fails, will fall back to SAML. This enables both authentication types to function simultaneously during the transition period.

You can also configure an authentication profile that includes both the RADIUS Server Profile and the SAML Identity Provider server profile. This setup allows the firewall to use both RADIUS and SAML for authentication requests, and it will check both authentication methods in parallel.

NEW QUESTION # 105

.....

Our materials can make you master the best NGFW-Engineer questions torrent in the shortest time and save your much time and energy to complete other thing. What most important is that our NGFW-Engineer study materials can be download, installed and used safe. We can guarantee to you that there no virus in our product. Not only that, we also provide the best service and the best NGFW-Engineer Exam Torrent to you and we can guarantee that the quality of our NGFW-Engineer learning dump is good. So please take it easy after the purchase and we won't let your money be wasted.
