Microsoft SC-200 Study Reference | SC-200 Actual Dumps

With the development of computer hi-tech, the computer application is widely used in recent years. The demand of the higher position about computer is increasing. SC-200 exam vce files help people who are interested in Microsoft company. If you have a useful certification, you will have outstanding advantage over other applicants while interviewing. Our SC-200 Exam Vce files help you go through examination and get certifications.

Microsoft Security Operations Analyst Sample Questions (Q264-Q269):

NEW QUESTION # 264

You have a Microsoft 365 E5 subscription that uses Microsoft Defender and an Azure subscription that uses Azure Sentinel. You need to identify all the devices that contain files in emails sent by a known malicious email sender. The query will be based on the match of the SHA256 hash.

How should you complete the query? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 265

You open the Cloud App Security portal as shown in the following exhibit.

You need to remediate the risk for the Launchpad app.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/cloud-app-security/governance-discovery>

NEW QUESTION # 266

You need to visualize Azure Sentinel data and enrich the data by using third-party data sources to identify indicators of compromise (IoC).

What should you use?

- A. Microsoft Cloud App Security
- B. Azure Monitor
- C. notebooks in Azure Sentinel
- D. hunting queries in Azure Sentinel

Answer: C

Explanation:

According to Microsoft Sentinel documentation, notebooks integrate with Azure Machine Learning and Jupyter to allow advanced data visualization, enrichment, and correlation with third-party data sources.

Notebooks are used by security analysts and threat hunters to perform deep investigations by combining Sentinel data (such as logs, alerts, and incidents) with external threat intelligence feeds, indicators of compromise (IoCs), and custom datasets.

Microsoft describes notebooks as:

"A powerful tool built on Jupyter and Azure Machine Learning that allows you to use Python code to enrich Microsoft Sentinel data with external data sources, visualize data, and identify patterns and IoCs." They allow analysts to query, visualize, and correlate data interactively, going beyond the built-in dashboards and KQL-based analytics.

Thus, to visualize Sentinel data and enrich it with third-party IoC data, Notebooks in Azure Sentinel is the correct solution

NEW QUESTION # 267

DRAG DROP

You have an Azure Sentinel deployment.

You need to query for all suspicious credential access activities.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Answer:

Explanation:

Section: [none]

NEW QUESTION # 268

You have a Microsoft 365 E5 subscription that uses Microsoft Copilot for Security. Copilot for Security has the default settings configured. You need to ensure that a user named User1 can use Copilot for Security to perform the following tasks:

- * Upload files.
- * View the usage dashboard.
- * Share promptbooks with all users.

The solution must follow the principle of least privilege. Which role should you assign to User1?

- A. Copilot Owner
- B. Copilot Contributor
