SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
Topic 2	<ul style="list-style-type: none">• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

Topic 3	<ul style="list-style-type: none"> • Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q15-Q20):

NEW QUESTION # 15

If you add a custom field to the ContractWorkspace class, which other class(es) will that field be added to?

- A. InternalContractWorkspace and SalesContractWorkspace
- B. SalesContractRequest and InternalContractRequest
- C. ContractRequest
- D. AbstractContractWorkspace

Answer: A

Explanation:

TheContractWorkspace class is a parent class to both InternalContractWorkspace and SalesContractWorkspaceclasses in SAP Ariba. When a custom field is added to ContractWorkspace, it automatically inherits down to both these subclasses, making the field available in both internal and sales contract workspace types. It does not propagate upward to AbstractContractWorkspace or into contract request classes. This inheritance model is part of SAP Ariba's class hierarchy to ensure consistent data structures across related contract objects.

NEW QUESTION # 16

The full SAP Ariba Strategic Sourcing suite baseline (Greenfield baseline scenario) has been applied to the customer Test site. The customer and project team will configure SAP Ariba Sourcing and deploy that to the Production site, then configure and deploy the remaining solutions in stages. What does this mean for subsequent migration activities?

- A. Subsequent migration activities follow Bluefield deployment scenario.
- B. If the baseline applied the full suite, the full suite must be configured and migrated to production at the same time.
- C. Both SAP Ariba Sourcing as well as subsequent migration activities would be Brownfield deployments.
- D. Subsequent migration activities will require a complete reconfiguration of existing solutions.

Answer: C

NEW QUESTION # 17

Which read-only files show the key and English translations for custom field labels and helptips?

- A. The JSON files that can be exported through AML & Translations Upload
- B. The customerResource files that can be exported through AML & Translations Upload

- C. The JSON files that can be exported through ICM
- D. The customerResource files that can be exported through ICM

Answer: A

Explanation:

SAP Ariba stores translations for custom field labels and help tips in JSON files exported and imported via AML (Advanced Metadata List) & Translations Upload. These JSON files contain key-value pairs representing the translation keys and their English or localized strings. This mechanism supports language management and bulk updates of translated content.

ICM exports configuration bundles but does not handle translation files in JSON format. CustomerResource files are not the standard format for translation export/import.

Using AML & Translations Upload allows administrators to maintain and update translations across multiple languages efficiently, ensuring consistent user experience in multi-lingual deployments.

NEW QUESTION # 18
