

Here's an Instant Way to Crack Network Appliance NS0-528 Exam

P.S. Free & New NS0-528 dumps are available on Google Drive shared by ExamcollectionPass: https://drive.google.com/open?id=1wsa1_AvrRMGajh5GGM9tDCXT5Jk4sAZA

ExamcollectionPass NS0-528 Web-Based Practice Test: For the Implementation Engineer - Data Protection Exam (NS0-528) web-based practice exam no special software installation is required. Because it is a browser-based Network Appliance NS0-528 practice test. The web-based Implementation Engineer - Data Protection Exam (NS0-528) practice exam works on all operating systems like Mac, Linux, iOS, Android, and Windows. In the same way, IE, Firefox, Opera and Safari, and all the major browsers support the web-based NS0-528 practice test.

Network Appliance NS0-528 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> NetApp ONTAP Business Continuity Solutions: This section of the exam measures the skills of Disaster Recovery Specialists and covers advanced business continuity technologies. This includes the configuration and operation of SnapMirror active sync for continuous data replication and the execution of SVM-DR (Storage Virtual Machine Disaster Recovery) operations to ensure high availability.
Topic 2	<ul style="list-style-type: none"> NetApp Data Protection Software: This section of the exam measures the skills of DevOps Engineers and focuses on the deployment and administration of NetApp's proprietary data protection software. A key part of this domain involves applying these solutions to protect modern containerized applications running in Kubernetes environments.
Topic 3	<ul style="list-style-type: none"> NetApp ONTAP Core Data Protection Features: This section of the exam measures the skills of Systems Administrators and validates core knowledge of data protection and redundancy within the ONTAP environment. It encompasses understanding how data efficiencies impact protection strategies and the practical knowledge required to deploy these data protection solutions effectively in a hybrid cloud infrastructure.
Topic 4	<ul style="list-style-type: none"> Data Protection Solutions: This section of the exam measures the skills of Storage Architects and covers the foundational principles of designing data protection solutions. It focuses on creating comprehensive design documentation, understanding the various components involved, and identifying all critical solution dependencies to ensure a robust and reliable data protection strategy.
Topic 5	<ul style="list-style-type: none"> Troubleshooting and Testing: This section of the exam measures the skills of Support Engineers and focuses on the practical skills needed to maintain data integrity. It involves troubleshooting common data protection configuration issues, executing well-defined Disaster Recovery (DR) procedures, and performing data restore operations to recover from data loss.

Printable NS0-528 PDF & New NS0-528 Exam Preparation

The candidates can test themselves for the Implementation Engineer - Data Protection Exam exam day by attempting the Implementation Engineer - Data Protection Exam NS0-528 practice test on the software. There is preparation material available on the NS0-528 Practice Exam software by ExamcollectionPass to study for the Network Appliance NS0-528 test.

Network Appliance Implementation Engineer - Data Protection Exam Sample Questions (Q141-Q146):

NEW QUESTION # 141

What is the role of data classification in a data protection solution?

- A. It helps determine the storage location of data
- **B. It helps determine the sensitivity of data**
- C. It helps determine the availability of data
- D. It helps determine the backup frequency of data

Answer: B

NEW QUESTION # 142

A customer wants to replicate between their two NetApp ONTAP clusters but is concerned that replication traffic might slow down normal data traffic. They still have two unused network ports on every node. You recommend using dedicated ports for the Intercluster LIFs, and you are tasked with creating the Intercluster LIFs so that they are on dedicated ports at all times. Which command must you use before creating InterCluster LIFs?

- A. network ipspace create -ipSPACE
- **B. network interface service-policy create**
- C. system services firewall policy create
- D. network interface failover-groups create

Answer: B

Explanation:

To ensure Intercluster LIFs are bound to dedicated ports and used only for replication traffic, you must first create a service policy that defines the LIF's role (e.g., intercluster). The network interface service-policy create command allows you to specify that the LIF is intended strictly for intercluster services, ensuring it's isolated from data traffic.

NEW QUESTION # 143

You need to upgrade to NetApp ONTAP 9.12.1 software on your source cluster in a SnapMirror relationship. The source cluster differs from the destination cluster and you want to take advantage of version-flexible SnapMirror replication. Which option should you choose?

- **A. Delete the DP-type relationship and create a new XDP-type relationship.**
- B. SnapMirror automatically converts existing DP-type relationships to XDP-type relationships.
- C. Run the command snapmirror resync and set the type to XDP.
- D. Delete the XDP-type relationship and create a new DP-type relationship.

Answer: A

Explanation:

To take advantage of version-flexible SnapMirror (introduced with XDP-type relationships), you must delete the existing DP-type relationship and create a new one using type XDP. DP-type relationships do not support version flexibility, which allows the source and destination clusters to run different ONTAP versions.

NEW QUESTION # 144

Which two statements are correct about configuring a peering connection between clusters? (Choose two.)

- A. The LIFs should be on the same subnet.
- B. You must use one cluster LIF per node per network.
- C. You must use at least one intercluster LIF per node.
- D. The intercluster LIFs must have full connectivity to each other.

Answer: C,D

NEW QUESTION # 145

An administrator performed a SnapMirror failover and tailback of several individual volumes from production and DR. After fallback to production, there are orphaned Snapshot copies, and the SnapMirror relationship from the DR to production is still in place from the prior fallback procedure.

Which snapmirror command cleans up the relationships and Snapshot copies?

- A. quiesce
- B. break
- C. resync
- D. release

Answer: D

Explanation:

The snapmirror release command is used to remove SnapMirror relationships from the source cluster's perspective and delete orphaned Snapshot copies that were created for the SnapMirror relationship. This is the correct cleanup step after fallback and ensures no leftover replication metadata remains.

NEW QUESTION # 146

.....

Dear, if you are preparing for the NS0-528 exam test, you cannot miss ExamcollectionPass NS0-528 dumps torrent. NS0-528 pdf torrent is the best valid and reliable study material you are looking for. The content of NS0-528 training vce are edited and compiled by the professional experts who have all been worked in the IT industry for decades. The authority and reliability are without any doubt. With the help of Network Appliance NS0-528 Free Download Pdf, you will get high scores in your actual test.
